5. PIN DESCRIPTION

Pin No.	Name	Description															
1	VDD	Power supply(+3.3V)															
2	VSS	Ground															
3	CS1	This is the chip select signal. When /CS1="L" and CS2="H", then the chip select becomes active, and data/command I/O is enabled.															
4	CS2																
5	/RES	When/ RES is set to "L", the register settings are initialized (cleared). The reset operation is performed by the /RES signal level.															
6	RS	This is connecting to the least significant bit of the normal MPU address bus, and it determines whether the data bits are data or command. RS="H": Indicates that DB0 to DB7 are display data. RS="L": Indicates that DB0 to DB7 are control data.															
7	R/W	When connected to 8080 series MPU, this pin is treated as the "/WR"signal of the 8080 MPU and is LOW-active. The signal on the data bus are latched at the rising edge of the /WR signal. When connected to 6800 series MPU, this pin is treated as the "R/W"signal of the 6800 MPU and decides the access type: When R/W ="H": Read. When R/W ="l": write.															
8	E	When connected to 8080 series MPU, this pin is treated as the "/RD"signal of the 8080 MPU and is LOW-active. The data bus is in an output status when this signal is "L". When connected to 6800 series MPU, this pin is treated as the "E"signal of the 6800 MPU and is HIGH-active. This is the enable clock input terminal of the 6800 series MPU.															
9~16	DB0~DB7	This is an 8-bit bi-directional data bus that connects to an 8-bit or 16-bit standard MPU data bus. When the serial interface (SPI-4) is selected (P/S="L") DB7: serial data input (SI); DB6: the serial clock input (SCL). DB0 to DB7 should be connected to VDD or floating. When the chip select is not active, DB0 to DB7 are set to high impedance.															
17	MI	This is the MPU interface selection pin. MI="H":6800 series MPU interface. MI="L":8080 series MPU interface.															
18	P/S	This pin configures the interface to be parallel mode or serial mode. P/S="H": Parallel data input/output. P/S="L": Serial data input. The following applies depending on the P/S status: <table border="1" data-bbox="422 1646 1481 1758"> <thead> <tr> <th>P/S</th> <th>Data/Command</th> <th>Data</th> <th>Read/Write</th> <th>Serial Clock</th> </tr> </thead> <tbody> <tr> <td>"H"</td> <td>A0</td> <td>DB0 to DB7</td> <td>/RD,/WR</td> <td>×</td> </tr> <tr> <td>"L"</td> <td>A0</td> <td>SI (DB7)</td> <td>Write only</td> <td>SCL (DB6)</td> </tr> </tbody> </table> When P/S="L",DB0 to DB5 must be fixed to"H" E and R/W are fixed to either "H" to "L". The serial access mode does NOT support read operation.	P/S	Data/Command	Data	Read/Write	Serial Clock	"H"	A0	DB0 to DB7	/RD,/WR	×	"L"	A0	SI (DB7)	Write only	SCL (DB6)
P/S	Data/Command	Data	Read/Write	Serial Clock													
"H"	A0	DB0 to DB7	/RD,/WR	×													
"L"	A0	SI (DB7)	Write only	SCL (DB6)

10. LCD MODULES HANDLING PRECAUTIONS

- n** The display panel is made of glass. Do not subject it to a mechanical shock by dropping it from a high place, etc.
- n** If the display panel is damaged and the liquid crystal substance inside it leaks out, do not get any in your mouth. If the substance come into contact with your skin or clothes promptly wash it off using soap and water.
- n** Do not apply excessive force to the display surface or the adjoining areas since this may cause the color tone to vary.
- n** The polarizer covering the display surface of the LCD module is soft and easily scratched. Handle this polarize carefully.
- n** To prevent destruction of the elements by static electricity, be careful to maintain an optimum work environment.
 - Be sure to ground the body when handling the LCD module.
 - Tools required for assembly, such as soldering irons, must be properly grounded.
 - To reduce the amount of static electricity generated, do not conduct assembly and other work under dry conditions.
 - The LCD module is coated with a film to protect the display surface. Exercise care when peeling off this protective film since static electricity may be generated.

n Storage precautions

When storing the LCD modules, avoid exposure to direct sunlight or to the light of fluorescent lamps. Keep the modules in bags designed to prevent static electricity charging under low temperature / normal humidity conditions (avoid high temperature / high humidity and low temperatures below 0°C). Whenever possible, the LCD modules should be stored in the same conditions in which they were shipped from our company.

11. OTHERS

- n** Liquid crystals solidify at low temperature (below the storage temperature range) leading to defective orientation of liquid crystal or the generation of air bubbles (black or white). Air bubbles may also be generated if the module is subjected to a strong shock at a low temperature.
- n** If the LCD modules have been operating for a long time showing the same display patterns may remain on the screen as ghost images and a slight contrast irregularity may also appear. Abnormal operating status can be resumed to be normal condition by suspending use for some time. It should be noted that this phenomena does not adversely affect performance reliability.
- n** To minimize the performance degradation of the LCD modules resulting from caused by static electricity, etc. exercise care to avoid holding the following sections when handling the modules :
 - Exposed area of the printed circuit board
 - Terminal electrode sections
