Variable Frequency Drive / Inverter
Starvert iC5

0.4 – 2.2kW 1 phase 200 – 230Volts

⚠ WARNING

Read the manual and follow the safety instructions before installation or operation

- Injury and electric shock
- Before opening the cover, disconnect all power and wait at least 10 minutes.
- Risk of Electric Shock
- More than one disconnect switch is required to de-energize the equipment before servicing.
- Risk of Electric Shock
- Ensure proper earth connection.

⚠ WARNING

Read the manual and follow the safety
instructions before installation or operation.

• Injury and electric shock

–Before opening the cover, disconnect all power
and wait at least 10 minutes.

• Risk of Electric Shock
–More than one disconnect switch is required to
de-energize the equipment before servicing.

• Risk of Electric Shock
–Ensure proper earth connection.

LS

Starvert iC5

"Global standard iC5, serves a wide variety of applications to meet the majority of user needs."

- ● Modbus communication (Option)
- ● PID control
- ● Sensorless vector control
- ● Motor parameter auto tuning

CE c(UL)us ISO9001 ISO14000

" Compact iC5,
is the best for a small and cost
effective configuration"

LS Inverter iC5 Series

Sensorless vector control

The iC5 adopts sensorless vector control algorithm, and it improves not only the torque control characteristics, but the speed controlability in an uncertain condition caused by the load variation as well.

Auto tuning

The auto tuning algorithm in the iC5 sets the motor factors automatically that brings the traditional commissioning difficulties mainly in low speed by the load variation and the low torque generation to a settlement.

• Difficulty of measuring the motor constant • Input errors by an user
• Low torque in low speed • Low speed by the load variation • Setup by an expert

characteristic

• Setup by an user • Improving torque in low speed
• Auto tuning of the motor characteristics • Optimized motor control

PNP and NPN switchable dual signals

The iC5 provides PNP and NPN signals for outside controllers.
It works with 24Vdc regardless of the type of PLC or control signals.

Communication interface, ModBus-RTU

The iC5 provides the most popular communication interface, ModBus-RTU for remote control by PLC or other devices.
Programmable PID process control

PID process control is used in iC5 to make speed corrections quickly with a minimal amount of overshoot and oscillation for the control of flow, temperature, pressure and etc.

Specifications

■ Specifications (200-230V class)

Model		SV004iC5-1	SV008iC5-1	SV015iC5-1	SV022iC5-1
Motor rating	[HP]	0.5	1	2	3
	[kW]	0.4	0.75	1.5	2.2
Output ratings	Capacity[kVA]	0.95	1.9	3	4.5
	FLA[A]	2.5	5	8	12
	Voltage	Three phase, 200 to 230V			
	Frequency	0 to 400Hz			
Input ratings	Voltage	Single phase, 200 to 230V (±10%)			
	Frequency	50 to 60Hz (±5%)			

■ Control

Control method	V/F control, Sensorless vector control
Frequency setting resolution	· Digital reference : 0.01Hz · Analog reference : 0.06Hz/60Hz
Frequency setting accuracy	· Digital : 0.01% of Maximum output frequency · Analog : 0.1% of Maximum output frequency
V/F ratio	Linear, Squar pattern, User V/F
Overload capacity	1min. at 150%, 30sec. at 200% (with inverse characteristic)
Torque boost	Manual(0 to 15% adjustable), Auto

■ Operation

|		
Input signal	Operator control	Keypad / Terminal / Communications
	Frequency setting	· Analog : 0~10V/4~20mA · Digital : Keypad · Communication : RS485
	Start signal	Forward / Reverse
	Multi-step	Setting up to 8 speeds (use multi-function terminal)
	Multi-step accel /decel time	0.1~6000 sec. Max. 8 types available by multi-function terminal Selectable accel/decel patterns : Linear, U and S
	Emergency stop	Interrupting the output of the drive
	Jog	Jog operation
	Fault reset	Reset the fault when protective function is active
Output signal	Operation status &	Frequency detection, Overload alarm, Stalling, Overvoltage, Undervoltage,
	Fault output	Drive overheating, Run, Stop, Constant speed, Speed searching, Fault output (Relay and Open collector output)
	Indicator	Choose one from output frequency, current, voltage and DC voltage.(Output voltage : 0~10V)
Operation function		DC braking, Frequency limit, Frequency jump, Second function, Slip compensation, Reversing prevention, Auto restart, PID control

■ Protection functions

Drive trip	Overvoltage, Undervoltage, Overcurrent, Drive overtemperature, Motor overtemperature, I/O phase loss, I/O mis-wiring, Overload , External device fault 1.2, Loss of speed command, Hardware fault, Communication error, CPU error
Drive alarm	Stall prevention, Overload alarm
Momentary power less	· Less than 15 msec : keeping operation · More than 15 msec : auto restart available

■ Display keypad

Operation information	Output frequency, current and voltage, Set frequency value, Operation speed, DC voltage
Trip information	Display the trip cause when the protection function activates. Recent 5 faults records stored

■ Environment

Operating ambient temp.	-10℃ ~ 50℃
Storage temperature	-20℃ ~ 65℃
Humidity	90%Rh max.(non condensing)
Altitude & Vibration	1000m max, 5.9m/sec²(0.6g) max.
Atmosphere	No corrosive gas, flammable gas, oil mist or dust
Pressure	70~106k Pa

output terminal**

Note : 1. ● = Main circuit terminal   ○ = Control circuit terminal
2. Analog output voltage is adjustable upto 12V.
3. Speed command can be set by Voltage, Current, Voltage+Current, Keypad, Keypad knob+Voltage , and Keypad knob+current.

L1	L2	P	P1	N	U	V	W	G

Terminal	Signal	Description
L1, L2	AC line input	Single phase AC line input
U, V, W	Drive output	3 phase output terminals to motor
P, P1	DC reactor	Connecting DC reactor
G	Ground	Chassis ground

P4	P5	VR	V1	CM	I	AM

30A	30B	30C	MO	EXTG	P24	P1	P2	CM	P3

Terminal		Signal	Description
Input	P1, P2	Multi-function input	Used for multi-function input. Factory default settings are as follows. P1 = FX, Forward
	P3, P4, P5		P2 = RX, Reverse P3 = BX, Emergency stop P4=RST, Fault reset P5=JOG, Jog Operation Command
	P24	PNP DC24V output	DC24V power supply in case of PNP mode
	VR	Frequency setting power	Power for Analog frequency setting, Maximum output is +12V 10mA
	VI	Frequency setting(Voltage)	Input DC 0 to 10V to set frequency. Input resistance is 20k Ω
	I	Frequency setting(Current)	Input DC 4 to 20mA to set frequency. Input resistance is 250 Ω
	CM	Common	Common terminal for the analog frequency setting signal and the FM(for monitoring)
Output	AM-CM	For monitoring	Output one out of Output frequency, Output current, Output voltage and DC voltage.
			Factory default set is to Output frequency.
			Maximum output voltage = 0 to 12V, output current = 10mA
	330A, 30C	Multi-function relay and	To interrupt the output when the protection function activates
	30B	Open collector output	or output multi-function signal.
	MO-EXTG	Terminal	Multi-function relay terminal : Max. AC250V/1A, DC30V/1A
			Open collector output terminal : Max. DC24V 50mA

RUN   STOP/RST

min   max

NPN

PNP
| Key	Function	Description
RUN	Run key	To operate the drive
STOP/RESET	Stop/Reset key	To stop operating or reset in case of fault
●	Program/Enter	To change parameters and save them
KNOB(Volume)	Frequency	To change the frequency
NPN/PNP	Selection	Mode selection between NPN and PNP
▲	Up	To increase the parameter values
▼	Down	To decrease the parameter values
◄	Left	To move the cursor left
►	Right	To move the cursor right

Program parameters

■ Parameter group

There are 4 parameter groups to set parameters properly for the operation.

Group	Description
Drive group	Basic parameters such as Command frequency, Accel/Decel time, etc.
Function 1 group	Basic functional parameters such as Max. frequency, Torque boost, etc.
Function 2 group	Application parameters such as Frequency jump, Max./Min. of limit of frequency, etc.
Input/Output group	Parameters to construct the sequence such as Multi-function terminal setting, Auto operation, etc.

■ Parameter group navigation
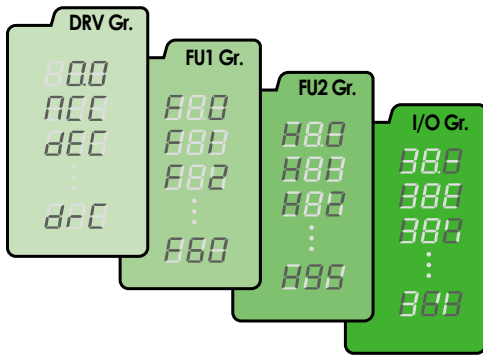

Drive group	Basic operation parameters such as Command frequency, Accel/Decel time, etc.
Function 1 group	Basic functional parameters for adjusting Output frequency, Voltage, etc.
Function 2 group	Application parameters of PID operation, The 2nd motor setting, etc.
Input/Output group	Parameters to construct the sequence such as Multi-function terminal setting, etc

● Shifting between groups is possible only in the first code of each group.

Shift by using Right shift key (▶)	Shift by using Left shift key (◀)
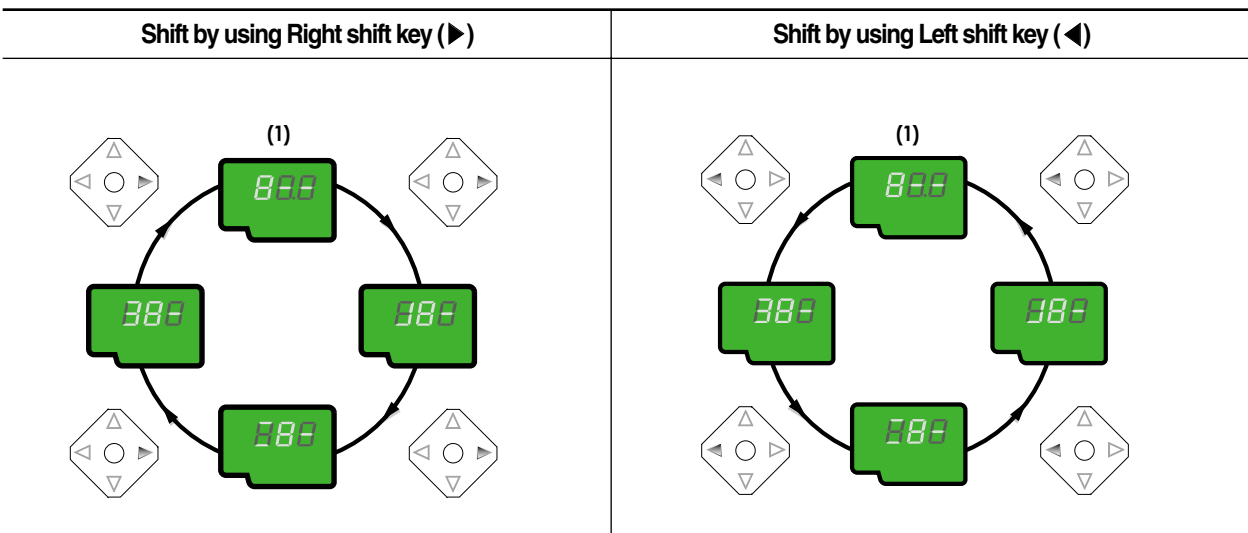

(1) The value of the Command frequency will be displayed in the first code of the Drive group.
It will show the value set by the operator. The factory set value is 0.0.

Program parameters

■ Parameter navigation in Drive group
1	*0.0*	· The first code "0.0" displayed. · Press up(▲) key once to move to next code.
2	*.0*	· The second code "ACC" appears. · Press up(▲) key once to move to next code.
3	*..0*	· The third code "dEC" is shown. · Press up(▲) key to move to next code.
4	*0.0 5*	· To move to the last code press up(▲) key until "drC" appears. · Press up(▲) key once more to return to the first code.
5	*0.0*	· To move in reverse order use down(▼) key.

■ Procedure to set command frequency in Drive group

To input new command frequency 30.05[Hz] from 0.0 set in the factory
1	*0.0*	· The first code "0.0" displayed. · Press pro/ent(●) key.
2	*.0*	· The digit of the first decimal place can be changed. · Press right (▶) key.
3	*..0*	· The digit of the second decimal place can be changed. · Press up(▲) key until the digit becomes 5.
4	*..5*	· Press left(◀) key.
5	*.05*	· The left digit can be set. · Press left(◀) key.
6	*0.05*	· Press left(◀) key.
7	*0.0*	· Though 00.0 is displayed, the actual value remains at 0.05. · Make 3 by pressing up(▲) key.
8	*3.0*	· Press pro/ent(●) key. · 30.0 is flickering. · Press pro/ent(●) key to stop the flickering.
9	*30.0*	· Command frequency 30.0 is stored.

Note : (1) The LCD on the keypad of Drive iC5 displays only 3 digits.
Use the shift keys (◀ ▶) to monitor and set the parameters.
(2) To cancel the parameter setting press the shift keys
(◀ or ▶) while 30.0 is flickering in the procedure no. 8 .
Drive group	Keypad display	Description	Setting range	Factory default	Adjustable during run

	I60	Inverter number	1 to 32	1	Yes
	I61	Baud rate	0(1200bps) 1(2400bps) 2(4800bps) 3(9600bps) 4(19200bps)	3	Yes
	I62	Operating selection at loss of freq. reference	0(None) 1(Free run) 2(Stop)	0	Yes
	I63	Waiting time after loss of freq. reference	0.1 to 12[sec]	1.0	Yes

Warning :

If protection function activates due to error/fault in the inverter, corresponding alarm is displayed on the keypad as shown below.
Correct the error/fault before restarting or it may decrease the inverter's life expectancy.

Display	Fault/Error	Description
OCt	Overcurrent	Output current has been greater than 200% of the rated current. The inverter output is interrupted.
GFt	Ground fault	Ground fault has been occurred at the load side of the inverter. The inverter output is interrupted.
IOL	Inverter overload	Output current greater than 150% of the rated current has been flowed over 1 min. The inverter output is interrupted.
OLt	Overload trip	Output current has been greater than the set value (F57) of the rated current. The inverter output is interrupted.
OHt	Coolingpin overheat	Cooling pin has been overheated due to high ambient temperature. The inverter output is interrupted.
COL	DC link condenser overload	If the DC condenser of Inverter is in need of replacement the inverter output is interrupted.
POt	Output phase loss	One or more of output line U, V and W lost. The inverter output is interrupted.
Ovt	Overvoltage	The inverter main voltage has been risen above the permissible limit 400V. Check if deceleration time has been set too short or line input voltage is too high.
Lvt	Undervoltage	The inverter output is interrupted.
Eth	Electronic thermal	The inverter output is interrupted according to the set time-inverse curve to prevent the overtemperature of the motor due to overloads.
EEP	Parameter store error	Error has been occurred on the storing of the changed parameters. It is displayed when power is on.
HWt	Hardware error	It is displayed in case of software error. It is not possible to reset by STOP/RST key on the keypad or reset terminals. Open the inverter power and make sure the keypad power is off and close the power again.
Err	Communication error	Communication error between controller and keypad. It is not possible to reset by STOP/RST key on the keypad or reset terminals. Open the inverter power and make sure the keypad power is off and close the power again.
FAn	Coolingfan error	Error has been occurred on the coolingfan.
ESt	Output instant interrupting	The inverter output is interrupted in the case that BX terminal is ON. ⚠ Warning : To restart the drive make BX terminal OFF during the FX /RX is ON.
Sta	A contact fault signal input	If I20/21/22/23/24 set to 18 is ON, the inverter output is interrupted.
Stb	B contact fault signal input	If I20/21/22/23/24 set to 19 is ON, the inverter output is interrupted.
OOO	Frequency command loss	If signal input is failed for the driving by using analog input or option(RS485), try to drive according to the setting at I62.

| Fault/Error	Possibsle cause	Solution
BCE Overcurrent	⚠️ ● Accel/Decel time is not enough for the load inertia (GD²) Increase the Accel/Decel time ● The load is greater than the rating of the inverter. ● Inverter output is assigned during the free run of the motor. ● The motor brake operates too fast.	▶ Replace the inverter with a higher rating ▶ Operate after the motor stops or use speed search(H22) in FU2 in the output terminals. ▶ Verify the output wiring ▶ Verify the mechanical brake.
GFE Ground fault	● Ground fault at the load side of the inverter. ● Insulation of the motor is broken.	▶ Check to see if there is something wrong with output wiring. ▶ Replace a motor.
IOL Inverter overload **OLE** Overload trip	● The load is greater than the rating of the inverter. ● Power rating is set to the lower value than the load ● Torque boost is too great.	▶ Increase the ratings of a motor and an inverter. ▶ Check to see if the setting is correct. ▶ Reduce the torque boost.
OHE Cooling fan overheat	● Fault in the cooling system. ● The cooling fan is used beyond the life expectancy. ● High ambient temperature	▶ Check to see if there is any alien substance in the ventilation system. ▶ Replace the cooling fan. ▶ Keep the ambient temperature below 40°….
POE Output phase loss	● Fault in the load side contactor ● Wiring problem	▶ Replace the contactor. ▶ Verify the output wiring
FAn Coolingfan error	● Alien substances are in the ventilator. ● The cooling fan is used beyond the expectancy.	▶ Check to see if there is any alien substance in the ventilation system. ▶ Replace the cooling fan.
OuE Overvoltage	● Decel time is not enough for the load inertia(GD²) ● There is a survived load in the load side. ● Higher voltage than rating is supplied.	▶ Increase the Decel time ▶ Uase DB unit. ▶ Verify the power voltage.
LuE Undervoltage	● Lower voltage than rating is supplied. ● Power capacity is not enough for the additional loads like welders and direct-on-line starting motors. ● Fault in the line side contactor	▶ Verify the power voltage. ▶ Increase the power capacity. ▶ Replace the contactor.
ETH Electronic thermal	● Overtemperature of the motor ● The load is greater than the rating of the inverter. ● Electronic thermal level is set lower than rating. ● Inverter power rating is set to the lower value than the load ● Long operation at low speed.	▶ Reduce the load or operation times. ▶ Increase the ratings of the inverter. ▶ Adjust the electronic thermal properly. ▶ Adjust the inverter rating properly. ▶ Replace the motor with the separated power cable for the cooling fan.
ЧEA A contact fault signal input **ЧEb** B contact fault signal input	● The terminal I20/21/22/23/24 set to18/19 is ON	Verify the circuits connected to the external fault terminals.
BBE Frequency command loss	● Frequency command loss at terminals V1 and I	Verify the wiring connected to V1 and I terminals.
EPP Parameter store error **HuE** Output instant interrupting **EPP** Communication error	● Refer to LS or distributors	

Warning :

Carefully read the instruction for installation and wiring of inverters and relevant devices. Normal operation is impossible in case of the improper system design and wiring. These can shorten the life of the inverter and damage it at the worst.
INDUCTORS FOR VARIABLE SPEED DRIVES

The inductors manufactured with special magneticcores are advisable for location: BETWEEN MAINS AND VARIABLE SPEED DRIVE, in order to protect the equipment from overvoltages, voltage surges and also to limit the line current and the harmonics generated by VSD. BETWEEN VARIBLE SPEED DRIVE AND MOTOR, to absorb the voltage peaks in the motor terminals, when the connection cables are long or there are more than one motor in parallel, for having a better efficiency and to eliminate the humming noise of the motor.
POWER LINE FILTERS

The family of filters manufactured by LIFASA has been specially developed and approved for its application with variable speed drives, to assure the compliance of the EMC (Electro Magnetic Compatibility) and the LV safety European Directives, in both industrial and domestic environments.

VARIABLE SPEED DRIVES

• Powers from 0.37 to 375 kW
• Sngle/three phase voltages 220/230 Vac
• Three phase voltages 380/460 Vac
• Sensorless vector control, V/F closed loop
• Removable console with copy function
• RS485 communication facilities as standard
• Autotuning
• Special parameters for special applications
OUTPUT LC FILTERS

The commutation of the IGBT's at high frequency (PWM) provokes an output voltage with peaks up to 1300 V The LC filter - low pass - reduce the dV/dt converting the voltage in a sinus waveform, eliminating all the isolation problems in the motor and the emission of interference from the cables.

Leading Innovation, Creating Tomorrow

⚠ **Safety Instructions**

- For your safety, please read user's manual thoroughly before operating.
- Contact the nearest authorized service facility for examination, repair, or adjustment.
- Please contact qualified service technician when you need maintenance.
  Do not disassemble or repair by yourself!
- Any maintenance and inspection shall be performed by the personnel having expertise concerned.
