- · RoHS compliant

General Description

The Tango 20 is a GPS puck antenna with screw mount thread as well as an adhesive base. The two provide a firm fixation to its surface that helps prevent water ingress. Because of this, the Tango 20 is well suited to the outdoors and being exposed to the elements. Common mounting surfaces are outside on a vehicle roof, or even inside environments such as attaching to the top of vending machine. The screw mount means the Tango 20 can be fixed permanently to its surface, without fear of it being unknowingly removed. Therefore the Tango 20 is a toughened, outdoor designed, GPS antenna that will resist both the forces of nature and the forces of unwanted persons.

The Tango 20 measures at 46.6 x 14.5mm (diameter x height), so it is a compact, puck shape antenna that will allow it to fit discretely onto its surface. The Tango 20 can come with a variety of cable lengths and connectors, customised to request. The most common are found in the ordering details over page.
