

High Temperature Probes

Foundry Probe

Type K, CHROME[®]-ALOMEGA[®]
Thermocouple Elements
Measures Hot Metal Surfaces
Rated up to 1260°C (2300°F)
Extra Heavy Duty Design
6 mm (¼") Diameter Contact Elements
Works with High Temperature Impedance
Type K Temperature Readouts
Rugged, Heavy Duty Aluminum Handle

Specifically designed for use where surface temperatures reach up to 1260°C (2300°F) and rough handling is routine, OMEGA's foundry probe uses large, heavy duty tips that can penetrate surface slag to measure the true temperature of the casting. The surface to be measured must be electrically conductive. The lead wires are 16-gage stranded wire with high temperature insulation and stainless steel overbraiding for added protection.

Will not work with analog display systems requiring 10 or 15 input impedance.

Specifications
