

Nicholson®

Nicholson saw products are manufactured to the highest standards of quality.

Each tool is engineered for easy use and for long life.

The Nicholson saw range includes handsaws, backsaws, hacksaws, Diamond Blades, Holesaws and a comprehensive range of premium quality and general purpose tungsten carbide tipped circular sawblades.

FEATURES & BENEFITS

Nicholson saw products are manufactured to the highest standards of quality. Each tool is engineered for easy use and for long life. The Nicholson saw range includes handsaws, backsaws, hacksaws, Diamond Blades, Holesaws and a comprehensive range of premium quality tungsten carbide tipped circular sawblades.

Features

1. High carbon steel body
2. Hardened and tempered body
3. Ground, polished and tensioned
4. Deep gullets
5. Tooth Shape Design
6. Large Tungsten carbide tips
7. Diamond lapped tips
8. Brazed tips
9. Alternate flat top and bevel ground tips
10. Precise arbor hole
11. Variable arbor
12. Reputable Brand

Benefits

1. Durability and long life
2. Does not distort (lateral run-out)
3. Blades run true
4. Cleaner cut, less power required
5. Proven quality
6. Prolonged, long life use
7. For maximum stock removal
8. For faster ripping and cross cutting
9. For longer life
10. For sharper, longer lasting edge
11. Teeth can be sharpened or replaced
12. For efficient ripping and cross cutting, slices through the work
13. Cuts in a perfect circle
14. To fit most saw models
15. Quality, back up support

Premium Quality Wood Cutting Blades

- Premium quality tungsten carbide tipped saw blades
- Tooth designed and shaped for faster cutting
- Diamond lapped tooth sharpening for longer lasting edge
- Made from high carbon steel, blades are hardened, tempered and polished
- Blades tensioned to run true

NMS925	48 teeth	25mm	9" 230mm	■ 705145	1

FEATURES AND BENEFITS

- High grade carbon steel body for durability & long life
- Hardened & tempered body, ground, polished and tensioned to prevent distortion to ensure the blade runs true
- Thin kerf for cleaner cuts requiring less power
- Deep gullets for maximum stock removal
- Tungsten carbide tips for faster cutting, sharper, longer lasting edge
- Alternate bevelled ground tips that can be sharpened or replaced
- Precise arbour hole to fit most saw models
- Reputable brand with quality backup support and fully guaranteed

Blade Care

- Extend blade life by securing both ends of the material to be cut, so vibration can be kept to a minimum
- Avoid plunge cutting
- Never use a spacer when using an angle grinder, use a guide to help reduce movement
- Tighten collars to avoid any slipping of the blade. Failure to do so will result in damage to the blade
- When cutting aluminium a lubricant must be used
- Always keep the blade moving through the material, allowing the blade to do the cutting. Forcing the blade will result in overheating

Holesaw Kits

NHSK9

NHSK13

Material Number	Description	APN/UPC	Shelf Pack
NHSK9	9 Piece Professional Kit	■ 811020	1

Sizes: 16mm, 20mm, 25mm, 32mm, 40mm, 51mm
1 x 11mm Arbor and 1 x 10mm Arbor and adaptor, both with pilot drill

NHSK13	13 Piece Professional Kit	■ 002602	10
--------	---------------------------	----------	----

- High speed, Bi-metalloy steel for increased durability
- Permits fast, clean cuts in steel, cast iron, aluminium, brass, bronze, plastics and wood
- The set comprises: Holesaws: 19mm, 22mm, 29mm, 35mm, 38mm, 44mm, 51mm, 54mm, 57mm. Arbor 99002 (1/4" round shank with 1/2-20 UNF thread), Arbor 99010 (7/16 hex shank with 5/8-18 UNF thread) and Hex key 99017, packed in durable blow moulded carry case
- Holesaw sizes are stamped into each holesaw for easy identification

TIPS FOR HOLESAW USE

IMPORTANT: When using the Hex Pin Arbor, be sure the retractable pins are engaged in the holes in the top of the holesaw, only threading the holesaw onto the arbor is not sufficient.

LUBRICANT

Holesaws cut most ferrous metals faster and more efficiently with the use of a lubricant. Cast iron is cut dry, paraffin or beeswax is often used when cutting aluminium.

A level, even pressure produces the most efficient cutting action; excessive pressure will dull and possibly break the teeth.

ALWAYS WEAR EYE PROTECTION

It is essential that the operator and others in the area wear protective eye equipment when using power tools.

CLEARING THE CHIPS

When cutting thick material, the saw should be removed at intervals to allow for chip clearance.

Saws

Material Number	Description mm/in	APN/UPC	Shelf Pack
NWB6	WALL BOARD SAW With Auger 382/15	■ 802004	12
NDWS	DRY WALL SAW	■ 921187	12

- Super sharp cross-ground blade for fast and easy cutting action
- Extra thick tempered steel blade for long life
- Ideal for cutting gyprock, plywood, rope, shrubs & other general purpose applications

NJS2	MULTI-USE SAW	■ 921170	12
------	---------------	----------	----

- Multi-Use for cutting metal, plastic, wood, plasterboard and gardening work
- Comfort design for confined work areas
- Works with several blade sizes
- Additional blade included

Handsaws

------	---	----------	---

- Compact measuring wheel, convenient for quick estimates
- Ideal for real estate, home owners, sporting events etc
- Starting-point indicator for easy measurements
- Adjustable length handle for convenient use and storage
- Large rubber wheel provides greater stability and longer life
- Convenient folding stand
- Carry bag included
- Units of measure = 100mm/m
- Counter Limit = 9999.99mm
- Minimum Unit = 100mm
- Tolerance of +/- 5mm per metre

Nicholson®

FILES & RASPS

The Nicholson File Company formed in the U.S.A. in 1864, was the first successful manufacturer of machine made files. Today, the Nicholson range has increased in scope and size and are manufactured in many Nicholson File plants around the world to the same high standards of quality.

Nicholson® Files and Rasps

Files

FILES LISTED IN BOLD FONT ARE CARDED AND INCLUDE CUSHION GRIP HANDLE (EXCLUDING CONTACT POINT FILES)

File Terminology

Length is measured exclusive of tang, from point to heel. Desired stroke length, type of material and its size will determine length required.

Kinds of Teeth

- SINGLE-CUT** Single set of parallel, diagonal rows of teeth. singlecut files are often used with light pressure to produce a smooth surface finish or to put a keen edge on knives, shears or saws.
- DOUBLE-CUT** Two sets of diagonal rows of teeth. The second set of teeth is cut in the opposite diagonal direction and on top of the first set. The first set of teeth is known as the overcut while the second is called the upcut. The upcut is finer than the overcut. The double-cut file is used with heavier pressure than the single-cut and removes material faster from the workplace.
- RASP-CUT** Teeth arranged in curved contours across the file face. The curved-cut file is normally used in automotive body shops for smoothing body panels.

Description

Work to be accomplished, roughing or finishing, will determine type of teeth and coarseness for each application. Most files are available with three grades of cut: bastard-cut, second-cut and smooth cut. The degree of coarseness is greater in longer files, but differences between bastard, second-cut and smooth are proportionate.

THE RIGHT FILE FOR THE JOB

- HAND FILE:** For finishing flat surfaces.
- ROUND FILE:** For circular openings and concave surfaces.
- HALF ROUND FILE:** For flat, concave and convex surfaces.
- HANDY FILE:** For tool sharpening and general filing.
- MAGICUT FILE:** For use on aluminium, brass, bronze, copper, hard plastics, stainless steel.
- SQUARE FILE:** For filing slots, key seats and general surface filing.
- HALF ROUND WOOD RASP:** For use on wood and soft metals.
- CHAINSAW FILE:** For sharpening round, hooded chainsaw teeth.
- WOODCRAFT RASP:** For use on wood, leather and soft metals.
- DOUBLE ENDER FILE:** For sharpening saws with 60° angle.
- FLAT FILE:** For general work on iron, steel etc.
- WARDING FILE:** Locksmith's file for ward notches in keys and narrow places.
- CANTSAW FILE:** For sharpening circular saw blades.
- BODIFILE FILE:** For automotive panel filing.
- MILL FILE:** For draw filing in machine shops, fine finishing and tool sharpening. Also used to file large circular saw blades.
- TAPER FILES:** For sharpening hand saws.
- SWISS PATTERN FILES:** For exact filing of extremely fine cuts. Suitable for toolmakers, watchmakers and jewellers.

Care of the file

The teeth of the file should be protected when the file is not in use by hanging it in a rack or keeping it in a drawer with divisions.

Files should always be kept clear of water or grease since this impairs the filing action. It is advisable to wrap the file in a cloth for protection when it is carried in a tool box.

The file teeth should be kept clean at all times by using a file card to clear the grooves between the teeth or a wire file brush.
