

# Standard Heavy Duty Limit Switches

# FD/FP/FL

## Heavy duty limit switches with snap-action contacts and positive break according to BS/EN60947-5-1.

- Bifurcated contacts for low resistance and high reliability - suitable for switching low-level electronic currents
- Double-break contacts with electrically separate NO and NC circuits in conformity with VDE 0660 part 206
- 10A 500VAC/600VDC rated
- Lever types can be user-set to switch by clockwise movement only, anti-clockwise only or both
- Turret head position rotatable in 90° increments
- Centre-position indicator arrow lever actuators
- Wide range of actuators
- Single and triple cable entry models
- Removable contact block for ease of wiring
- Metal or plastic housing options
- IP66 according to BS EN60947-1
- FD and FP dimensions in accordance with EN50041
- Approvals: UL, CSA

## Options and ordering codes

	FI	<b>5</b>	01			
Heavy duty metal housing	FD			-[-]	Standa	ard actuators – options overleaf
Heavy duty plastic housing	FP

Snap-action contacts, 1NO + 1NC	5			385	Lift-sty	rle turret with 90° total travel
Slow-action, break before make 1NO + 1NC	6				- Specif	y lever type for lift-style switch:
Slow-action, make before break 1NO + 1NC	7					
Slow-action contacts, 2NC	9				L313	Fixed position roller
Slow-action contacts, 2NO	10				L353	Single adjustment roller
Snap-action contacts, 2NC	11				1054	Dual adjustment nation
Slow-action contacts, break before make 2NC + 1NO	20	Please note: Positive br	eak		L354	Dual adjustment roller
Slow-action contacts, break before make 3NC	21	applies to the NC contactypes 5, 6, 7, 9, 11, 20				
Slow-action contacts, break before make 1NC + 2NO $$	22	and 22 only.	, _1			
Snap-action contacts, 2NO + 2NC	2					

## **Specifications**

Rated thermal current Ith	10A
Rated working voltage	500VAC/600VDC
Maximum operating frequency	6000/hour
Mechanical life	>20 million operations
Contact form	1NO + 1NC
Initial contact resistance	<25 mOhms
Contact gap	>2.5mm (2 x 1.25mm conforming to VDE 0660 part 206)
Contact material	silver
Dielectric strength	2000VAC, $50/60$ Hz for 1 minute between open contacts
	2000VAC, 50/60Hz for 1 minute between current-carrying parts and ground
Protection rating	IP66
Ambient operating temperature	–25 to +80 deg. C
Ambient humidity	95% R.H.
Maximum wire size	$2 \times 1.5 \text{mm}^2$ flexible, $2 \times 2.5 \text{mm}^2$ solid
Housing material	FD/FL: die-cast metal alloy, FP: self-extinguishing, glass-reinforced, thermoplastic resin
Conduit entry	PG 13.5

## Contact ratings

BS/EN 60947-5-1		
AC15 – Control of AC electromagnetic	230VAC	6A
loads>72VA sealed – replaces AC11	400VAC	4A
	500VAC	1A
DC19 Control (DC dottor)	OATTOC	CA
DC13 – Control of DC electromagnetic	24VDC	6A
loads where the time taken to reach	125VDC	1.1A
95% of the rated current is equal to	250VDC	0.4A
6 times the power of the load (where P<50W) - replace	ces DC11	

## Terminal connections

Terminal screws: M3.5 with rising cable clamps.
Standard contacts (type 5) NO: 13-14, NC: 21-22
Note: The positive break of the type 5 contact block applies to the NC contacts only. Connections to safety circuits should NOT be made using the NO

To ensure positive breaking of the contacts, exceed the pre-travel by 1.5mm or 25° according to the model.

Maximum screw tightening torque 0.8Nm (8Kg cm)

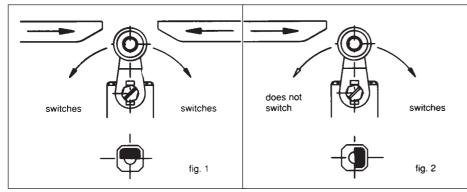

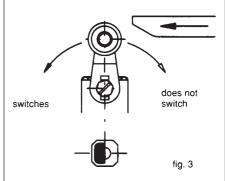

## Programmable head - lever operation models

All limit switches with lever operation in the FD/FP/FL ranges can be user-set to switch by clockwise rotation only, anticlockwise only or both. To change the operation, which is factory set to switch in both directions, the four screws securing the turret head should be loosened, the head removed and the internal piston rotated through  $90^{\circ}$ . The head should then be replaced.

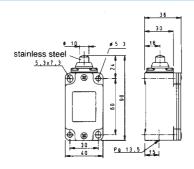

The models to which this applies are: 531; 532; 533; 535; 536; 538; 551; 552; 553.

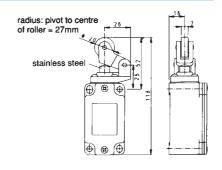

Figure 1 shows the piston position for switching in both directions, figure 2 for clockwise only and figure 3 for anticlockwise only.

## **Actuator type 76**

## Note: Not suitable for safety circuits. For rope operated safety switches, see Safety Limit Switches data sheet on page 217

## Glossary

The following is a glossary of terms in specifying actuator characteristics:

**Operating force (OF)**The force applied to the actuator required to operate the switch contacts.

**Releasing force (RF)**The value to which the force on the actuator must be reduced to allow the contacts to return to the normal

**Total force (TF)** The force applied to the actuator required to reach the stopper from the free position

**Free position (FP)**The initial position of the actuator when there is no external force applied.

## Operating position (OP)

The position of the actuator at which the contacts snap to the operated contact position measured with respect to the centres of the mounting holes.

Releasing position (RP)
The position of the actuator at which the contacts snap from the operated contact position to their normal position.

**Total travel position (TTP)**The position of the actuator when it reaches the limit of travel – must not be

#### Pretravel (PT)

The distance or angle through which the actuator moves from the free position to the operating position

#### Overtravel (OT)

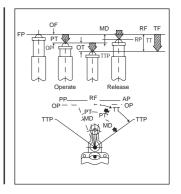

The distance or angle of the actuator movement beyond the operating

## **Movement differential (MD)** The distance or angle from the

operating position to the releasing position.

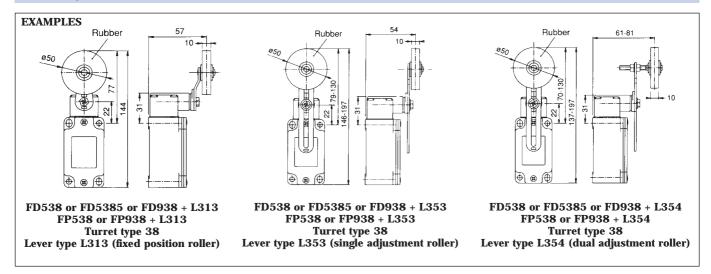

### Total travel (TT)

The sum of the pretravel and overtravel expressed by distance or angle.

## Lift-style switches

- Three lever options.
- FL model also available with a choice of lever.
- Age-resistant and oil-resistant rubber rollers.
- Lever position adjustable over 360° in 10° increments.
- Head rotatable in 90° increments.

- User-selectable to switch by clockwise movement only, anticlockwise only, or both.
- Glass-reinforced thermoplastic resin model (FP) double insulated for electrical safety.
- Die-cast metal alloy models (FD and FL) include earth terminal.

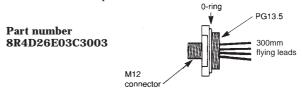

Types L353 and L354 have a location slot at the end to lock the levers at full extension if required.

## Replacement contact blocks

1NO+1NC 13 21 14 22	Positive break  Snap action standard contact block
1NO+1NC 13 21 Y - † 14 22	Positive break  Slow action break before make
1NO+1NC 13 21 B7	Positive break  Slow action make before break
2NC B9 11 21 7 - 7 12 22 B14	Positive break  Slow action, contacts  11-12, 21-22 open at the same time  Positive break  Slow action, contacts 11-12 open first, further actuator travel causes contacts 21-22 to open
2NO B10 13 23	Slow action, contacts 13-14, 23-24 close at the same time Slow action, contacts 13-14 close first, further actuator travel causes contacts 23-24 to close
2NO+2NC B2 13 21 43 31 14 22 44 32	Snap action, double pole

# Plug and socket limit switches

All FD/FP/FL series limit switches can be converted to a plug-in style by the addition of an adaptor.

The adaptor is screwed into the limit switch and the four flying leads connected to the four terminals of the contact block.

Suitable 4-wire plug leads are available – see pages 332 to 335.
