Restriction on the use of Hazardous Substances (RoHS)

At Tyco Electronics, we're ready to support your RoHS requirements. We've assessed more than 1.5 million end items/components for RoHS compliance, and issued new part numbers where any change was required to eliminate the restricted materials. Part numbers in this catalog are identified as:

RoHS Compliant — Part numbers in this catalog are RoHS Compliant, unless marked otherwise. These products comply with European Union Directive 2002/95/EC as amended 1 January 2006 that restricts the use of lead, mercury, cadmium, hexavalent chromium, PBB, and PBDE in certain electrical and electronic products sold into the EU as of 1 July 2006.

NOTE: For purposes of this Catalog, included within the definition of RoHS Compliant are products that are clearly "Out of Scope" of the RoHS Directive such as hand tools and other non-electrical accessories.

NOTE: Information regarding RoHS compliance is provided based on reasonable inquiry of our suppliers and represents our current actual knowledge based on the information provided by our suppliers. This information is subject to change. For latest compliance status, refer to our website referenced at right.

Getting the Information You Need

Our comprehensive on-line RoHS Customer Support Center provides a forum to answer your questions and support your RoHS needs. A RoHS FAQ (Frequently Asked Questions) is available with links to more detailed information. You can also submit RoHS questions and receive a response within 24 hours during a normal work week. The Support Center also provides:

Need more information? Call Technical Support at the numbers listed below. Technical Support is staffed with specialists well versed in all Tyco Electronics products. They can provide

Printed Circuit Board (PCB) Pin Receptacles

Product Facts

- Components with pin contact can be easily inserted into the printed circuit board after the pin receptacles are flow soldered
- The receptacles hold the pins from the components without the necessity of soldering
- Components can be easily removed from the printed circuit board for replacement or repair
- **■** Components with pin contacts may be mated and unmated 10 times
- The receptacle contacts are securely clinched to the printed circuit board prior to soldering
- The receptacles are machine applied by semiautomatic and automatic insertion equipment
- Components may be inserted from either side of the printed circuit board

Technical Documents Product Specification

108-1411 **Application Specification** 114-2127

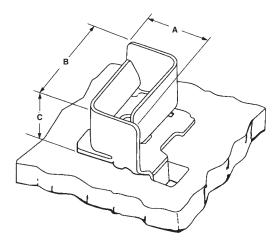

The Printed Circuit Board Pin Receptacle provides a reliable and cost effective means of attaching components with pin contacts to a printed circuit board. Components are held in place without solder allowing for their easy removal from the printed circuit board for replacement or repair. Receptacle contacts are inserted and securely clinched to the printed circuit board by means of semiautomatic or automatic machines.

1For use with either AMP FHIS Bench Machine 464300-1 or AMP Comp-U-Sertor II Machine 122300-1. Note: Part Numbers are RoHS compliant except: ♦ Indicates non-RoHS compliant.

Recommended PCB Layout

Printed Circuit Board (PCB) Receptacles

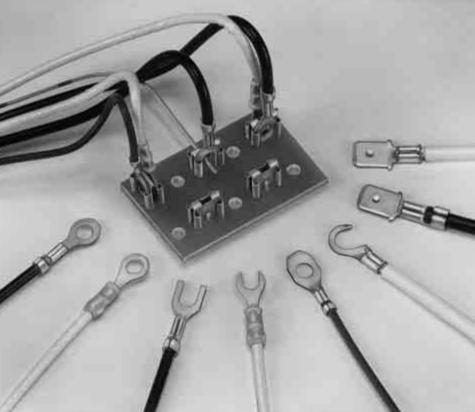

Product Facts

- Receptacles accept all .250 x .016 [6.35 x 0.41] thick terminal configurations
- Receptacles available for .250 x .032 [6.35 x 0.81] thick FASTON tab terminals
- Receptacles available for prepless termination of 24-22 AWG [0.2 - 0.4 mm²] solid wire using displacement crimp technique
- Available in tin-plated brass
- No tooling needed to insert or remove terminals
- **■** Continuous strip contacts allow high-speed application with single or multiple-head insertion machines
- An economical means of retrofitting and field replacing wire-to-board connections

Technical Documents Product Specification

108-2005 Receptacle, Spade, PCB **Application Specifications**

114-2001 Receptacle, PCB 114-2037 Receptacle, PCB, Clinchable

The Printed Circuit Board Receptacle is used in wireto-printed circuit board terminations. Wires may be terminated with terminals having tongue widths and thicknesses of .250 x .016 [6.35 x 0.41] and FASTON tab terminals of .250 x .032 [6.35 x 0.81]. These terminated wires are plugged into the receptacle and may be removed and replugged as required. An added feature is the ability of one receptacle to accept a 24-22 AWG [0.2-0.4 mm²] unterminated solid wire as well as a terminated wire.

The receptacle has applications in all industries requiring wire-to-pc board applications both in new equipment and existing equipment. The purpose

of its design is to allow field replacement without costly retrofitting. In new equipment, the pc board receptacle can be used to give flexibility in selection of wire termination, including tongue, fork, open barrel, and FASTON tabs. This receptacle also has the ability to replace screw and nut arrangements. In existing equipment, the receptacle is just as versatile and can be used for field replacement where the original wire termination remains the same, but the board layout changes. In essence, it allows you to plug the previously terminated wires into the new model without costly changes to wire termination tooling.

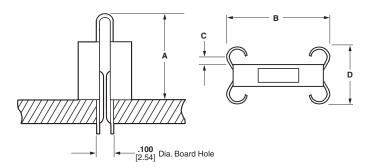

The pc board receptacle is a cost saving design that gives you a wide selection of wire termination alternatives. It is used in new equipment which provides versatility of connection and in old equipment to allow field replacements of units without costly retrofitting. In all cases installation of wire-to-board termination is accomplished without tools. For additional savings, the receptacle is designed to be inserted into your board by high-speed application equipment, then wave soldered giving you the lowest applied cost.

Catalog 82159 Revised 12-07

FASTON Printed Circuit Board Tabs and Receptacles

Product Facts

- Full line of PCB tabs and receptacles
- Straight and right-angle tabs available in .250, .187 and .110 series
- Receptacles produced in .250/.205 x .032 or .025. Standard or low insertion force receptacles available
- Strip product for automatic insertion
- Compatible with industry insertion equipment or full line of equipment available from Tyco Electronics

Tyco Electronics now offers a complete line of Printed Circuit Board tabs and receptacles. Tyco Electronics PCB product can be found in switches and on control boards around the world. Our product offering includes .250, .187 and .110 series vertical tabs, .250 and .187 right-angle tabs and .250/.205 vertical receptacles. Product is available in loose piece and strip form. In a short time, our product offering has grown from a handful of part numbers to dozens of parts. We continue to add to our product family as design changes, innovation and customers' requirements expand.

Insertion equipment is available for our entire strip product. The semiautomatic, air-powered Modular Insertion System (MIS) Bench machine is available for customers with moderate insertion requirements. The compact, fully automatic Comp-U-Sertor II machine is available for applications where larger volumes will be inserted and where programmable, microprocessor controlled equipment is desired. Insertion heads for both pieces of equipment are interchangeable, requiring less equipment investment. Tyco Electronics will also custom build a complete "pass through" system for high-end customer applications.

The Tyco Electronics product has been designed to be compatible with industry insertion equipment. In many cases, this product will work as a "drop in" replacement for existing product. In some cases, slight modifications or minor tooling changes are necessary. Please consult Technical Support or the Global Application Tooling Group for more details.

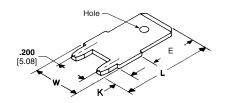

Tyco Electronics is one of the only companies that offers printed circuit board tabs and receptacles as well as the crimp to wire receptacles and tabs that offer a complete solution for your packaging needs.

FASTON RAST 5 Tab Header Assembly, 250 Series

Product Facts

- .250 x .032 [6.3 x 0.8] **FASTON Tabs built on 5 mm** centerlines
- **■** Shrouded Header Assembly that conforms to the **European RAST 5 Standard**
- Positive Lock RAST 5 Connector System, **AMP Standard Timer** RAST 5, AMP multifitting, AMP multifitting MKII, AMP MONO-SHAPE TAB MKII
- **Vertical and Right-Angle** Versions available in
- Tin Plated Brass Tabs are Standard, Silver Plated Tab Versions are available upon
- Lead Free Design is RoHS
- UL 94 V-0 Housing meets Glow Wire IEC 60695-1 Section 30.2.3 - 750°
- USR and CSR under
- VDE Reg. No. B718

■ Mating Tyco Electronics **Connector Families include** MKI, and AMP MONO-SHAPE

- 2 through 8 positions
- Request
- and ELV Compliant
- NO FLAME
- **■** Component Recognition File No. E28476
- VDE tested according to DIN EN61984 (VDE0627): 2002-09; EN61984: 2001

The FASTON RAST 5 Tab Header Assembly system is designed to provide a RAST 5 interface to a Printed Circuit Board. The RAST 5 Standard defines and standardizes the connector mating interface. 250 Series Tabs are placed on 5mm center lines with a plastic shroud that has keying, polarization, and locking features that help prevent mismating of the corresponding RAST 5 female receptacle housing. The header assembly is

designed to accept any RAST 5 compliant female receptacle system or individual quick connects.

The most common application for this product is for household appliance controls where OEMs want to minimize the possibility of crossed wires. It is also suited for other applications such as gaming, vending, and exercise equipment controls as well as residential, commercial and industrial HVAC and light industrial equipment. The

C. America: 52-55-1106-0803

system comes fully assembled and is easily press fit into the board for the soldering operation. Preassembly of the tabs into the Header ensures tab perpendicularity to the board. The solder leg PCB layout is based on the Industry Standard for similar systems available on the market. To further enhance correct placement onto the board, the vertical system includes a plastic post which allows Header placement to be polarized.

Material UL 94 V-0, 6/6 Nylon

AMP-BARREL Terminals

Product Facts

- **■** Unique insulation displacement technology
- **■** Eliminates wire preparation—no stripping or soldering
- Capable of being wavesoldered to pc board with other components, enabling wires to be terminated at a more conducive time and
- Anti-solder wicking design
- Accepts a wide range of wire sizes, solid or stranded
- Available in single and two-wire version
- Reusable terminal
- Available in loose-piece or strip version
- **■** Semiautomatic insertion machine for strip version
- Simple, rugged low cost wire insertion tool
- Recognized Under Component Recognition Program of Underwriters Laboratories. Inc. — File No. E28456

Instruction Sheets

408-3187 408-6505 408-6553

AMP-BARREL Terminals solve the problem of interconnecting discrete wires to printed circuit boards without permanently soldering them in place. and provide cost savings by eliminating the need for two-piece terminal systems, terminal strips or expensive space-consuming modular connectors.

These unique insulation displacement terminals are suitable for most printed circuit boards from .047 [1.19] to .125 [3.18] thick and are mounted in a space-saving, free-standing manner wherever required.

AMP-BARREL Terminals may be obtained in loose piece or strip form for semiautomatic machine insertion. Upon insertion, they are hand or wavesoldered with other components without fear of solder wicking into the wire termination area.

Termination is achieved by placing the end of a pre-cut unstripped wire horizontally to the board at the top of the AMP-BARREL Terminal. Insertion to the proper depth is accomplished by

the use of a simple. lowcost screwdriver type tool or low cost plastic stuffer cap. These caps use a standard Phillips type screwdriver to terminate the wire. When left in place on the terminal they provide strain relief and insulation. They may be removed and reused for field changes and/or repairs. The high compliancy of the terminal assures a highly reliable, stable interconnection and withstands extreme temperature, vibration and shock.

offer the added benefit of accepting a wide wire range, solid or stranded, within the same terminal. The .125 [3.18] diameter AMP-BARREL Terminal accepts a wire range of 28-18 AWG [0.08-0.8 mm²] with a maximum insulation diameter of .086 [2.18]. It is made of high strength, high ductility, pre-tinned phosphor bronze and accepts one or two wires of the same type that may vary in size by one wire gauge. The C-shaped cross-slot assures a reliable two-wire termination.

AMP-BARREL Terminals

This product also offers a wire cutoff version which allows the wire to be placed across the top of the terminal where the hand tool terminates and trims the wire in one action.

Similarly constructed, but of smaller size, are the .070 [1.78] and .090 [2.29] diameter AMP-BARREL Terminals. These terminals accept, respectively, wire sizes of 28-26 AWG [0.08-0.15 mm²] with a maximum insulation diameter of .036 [0.91] and 28-22 AWG [0.08-0.4 mm²] with a maximum insulation diameter of .053 [1.35]. They also will accept two wires of the same gauge and type.

The .156 [3.96] diameter AMP-BARREL Terminal accepts a wire range of 24-18 AWG [0.2-0.8 mm²] with a maximum insulation diameter of .115 [2.92]. It is made of tin-lead plated brass and will accept one wire per terminal.

All AMP-BARREL Terminals are reusable. This feature is extremely important when correcting wiring errors. making field repairs or modifications.

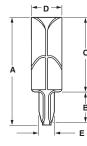

AMP-BARREL Terminals (Continued)

Application Tooling

Wire Insertion Tool

Precut, unstripped wires are easily terminated in the AMP-BARREL Terminal with a simple screwdriver type tool. It properly positions the wire to the correct depth in the terminal. For two wire applications, the second wire pushes the first wire into the lower section of the terminal.

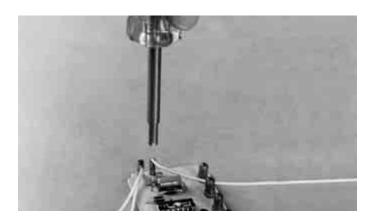

For improved comfort, a slip-on cushion grip is available.

The Wire Insertion Tool should be used for wire termination only; it should not be used to seat terminals onto the pc board.

QUADRA-MATE Wire-to-Printed Circuit Board Terminal

Product Facts

- Redundant wire insulation displacement termination
- **■** Built-in strain relief
- Accepts 28-24 AWG [0.09-0.2 mm²]
- Feed-thru connections allow wiring flexibility
- Free-standing
- Low board profile (less than 1/4" [6.35 mm] high)
- Available in loose piece or strip form
- Mass termination adaptability
- Capable of being reused
- Low applied costs

Applications

- Electronic games
- **■** Computer
- Telephone equipment
- Business machines
- Electronic control equipment

Technical Documents
Application Specification
114-2051

Product Specification 108-2032

The QUADRA-MATE Wireto-Printed Circuit Board Terminal is an extension of the MAG-MATE connector program, and is designed to terminate discrete wires to a pc board via insulation displacement slot technology. It is capable of accepting solid or stranded wire and permits wire end or feed-thru terminations. The terminal features four slots for redundant wire terminations and strain relief. The terminals are installed in random positions or in rows on the edge of a pc board either by hand tool, semiautomatic

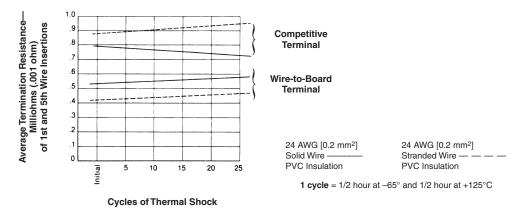

or fully-automatic machines.

The terminal is compact in design and readily adaptable to a wide variety of materials and plating selections, as well as terminating techniques such as daisy chaining, single ending and on-board jumping and programming.

The .100 [2.54] wide terminal has an overall height of approximately .210 [5.33] and occupies less than .120 x .130 [3.05 x 3.3] of board area and accommodates wire sizes 28-24 AWG [0.09-0.2 mm²] (see table).

The terminals are supplied in both loose piece and strip form and are easily assembled to the pc board in conjunction with on-board components prior to wave soldering. With the terminal being an integral part of the board, insertion of the unstripped wire into the four insulation displacement slots is accomplished by use of a simple hand tool (see table).

Semiautomatic insertion of strip parts to pc board is accomplished using mini-insertion head, Part No. 803371-1 in "U" frame applicator, Part No. 691679-1. For more sophisticated application equipment including cable makers and C.N.C. machines, contact Tyco Electronics.

* Available upon request, contact Tyco Electronics.

Recommended PC Board Applications

Note: Wire slots are designed to terminate wire sizes and types with polyvinyl chloride (PVC) insulation, Class 12B. For other wire sizes and insulation types, contact Tyco Electronics for application approval.

High Density Applications

Note: Part Numbers are RoHS compliant except: ♦ Indicates non-RoHS compliant.

Tyco Electronics printed circuit disconnect embodies the dual features of automation and the ability to make quick wiring changes. The special formed pins, available in .058 [1.47] and .093 [2.36] diameters, can be inserted in a printed circuit board quickly and reliably by fully automatic or semiautomatic machinery. The solid pin family, in .058 [1.47] diameter, is attached manually; its knurled edge retains it mechanically in the board until soldering is complete. All pins must be soldered to insure mechanical and electrical reliability. Pins may be used for either single or doublesided pc boards. The receptacles are applied quickly and efficiently to wire using semiautomatic AMP-O-LECTRIC or fully automatic AMPOMATOR machines.

All receptacles feature a precision wire crimp with an insulation crimp for high mechanical strength. A variety of wire and insulation ranges are available as listed. The combination of the pin and receptacle enables users to bring a variety of wires to a printed circuit board and offers the capability of a quick connect or disconnect. The product is ideal for use in prototype and production applications, particularly where wiring changes or rapid pc board interconnections are required. Specific users include radio, television, test equipment, computer and business machine industries.

AMP EDGE Single Lead Printed Circuit Terminals

Product Facts

- **■** Friction fitting, quick connect/disconnectsno insertion nor extraction tools required
- Excellent vibration and shock resistance
- Accepts wire size range 32-16 AWG [0.03-1.4 mm²]
- Wide choice of materials and finishes
- High-speed machine terminated for volume production at lowest installed cost

Technical Documents Product Specification 108-1011 AMP EDGE Terminals

AMP EDGE Terminals are quick connect/disconnect devices that adjust securely, through friction fitting, to machine slots in the type of board for which they are designed. Friction fitting not only precleans the contact areas, but also provides excellent vibration and shock resistance even under heavy stresses. Firm wire insulation support is a companion factor for positive retention in the board. These terminals, wholly aerated to eliminate moisture traps, may be applied anywhere on the perimeter of the board. They eliminate the need for eyelets and plated-through holes on two-sided boards and can be used back-to-back for commoning circuits.

Dimensions are in inches and millimeters unless otherwise specified. Values in brackets are metric equivalents.

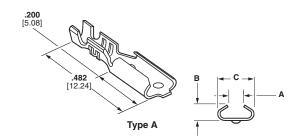

Dimensions are shown for reference purposes only. Specifications subject to change.

Miniature AMP-IN Terminals

Product Facts

- **■** Eliminates manual preparation of wires prior to soldering into pc boards
- Low applied cost
- Total height above pc board is less than most other components
- Available for 26-10 AWG, [0.15-5.5 mm²]
- Terminal locking lance holds wire in pc board for flow soldering
- Design allows both wire and terminal to be soldered and assures proper solder flow
- Insulation support provides strain relief for wire and protection of solder joint
- Type A terminals will provide both a positive board stop and positive insulation stop
- **■** Type E terminal offers minimum below pc board

Technical Documents Product Specification

Application Specification 114-1016

108-1081

Material and Finish 008 phosphor bronze, Pre-tin plated Pc Board Thickness — .062 [1.57]

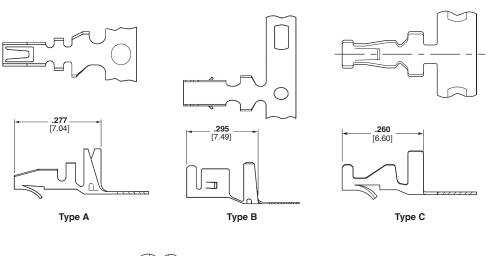

The miniature AMP-IN Terminal is designed not as an electrical terminal but as a mechanical holding device to enhance soldering of hookup wires to printed circuit boards. The combination of terminal and application tooling eliminates costly manual preparation of wires prior to soldering, and positions the wire to achieve reliable solder joints. Movement of the wire during soldering is restricted, providing for proper solder flow.

Notes: 1. Higher tensile available with nose crimp type C. 2. Not available in loose piece. 3. No hand tools available.

- Machine applied applicator required. For machine and applicator part numbers, call the Tooling Assistance Center at 1-800-722-1111.

Note: Part Numbers are RoHS compliant except: ♦ Indicates non-RoHS compliant.

Product Facts

- Connector housing provides gang insertion into pc board
- Housing insulates and provides short-circuit protection between contacts
- Housings are available in 2 to 15 positions for .079
 [2.01] and 2 to 20 for .098
 [2.49] centerline spacing
- Low profile design— .200 [5.08]
- Contacts available for 30-26 AWG [0.05-0.15 mm²] and 26-22 AWG [0.15-0.4 mm²]

Technical Documents

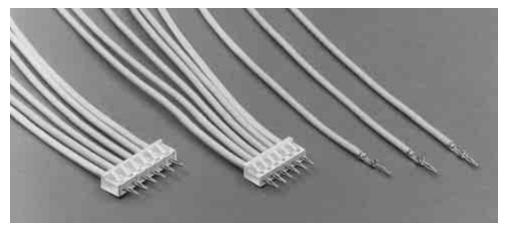

Product Specification— 108-5163

Application Specification—114-5062

Material and Finish

Housing—Nylon, 94V-0 rated Contact—See chart Pc Board Thickness Range— .047-.062 [1.19-1.57]

Low Profile Miniature AMP-IN Connectors

Low Profile Miniature AMP-IN Connectors provide an easy means of gang inserting leads into printed circuit boards. The design of the crimp snap-in contact aids in locating the pc board hole and inserting the contact into that hole. The low profile housing allows compactness of leads while providing insulation between them to prevent short-circuits. Housings are available in 2 to 15 positions for .079 [2.01] centerline spacing and 2 to 20 positions for .098 [2.49] centerline spacing.

Contacts come in 26-22 AWG [0.15-0.4 mm²] and 30-26 AWG [0.05-0.15 mm²] with insulation support crimp to provide strain relief. They accommodate a board thickness of .047 [1.19] to .062 [1.57].

Test Probe Receptacles

Product Facts

- Leg mounts are "V" shaped to promote solder wicking and consistent fillets
- Receptacle is recessed in housing to prevent shorting or flashover
- Probe may be inserted in either end of test probe receptacle except Type C
- Housing color is molded, not dyed
- Accepts .080±.001 [2.03±0.025] probes

Material and Finish

Housing—Nylon type 6/6 Contact—Beryllium copper

Receptacle and Legs—Brass, ASTM B36, Alloy 6

Technical Documents

Product Specification—

108-1082 Receptacle, Test Probe

Performance Characteristics

Insulation Resistance—

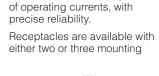

10,000 megohms

Retention Value—

16oz. [4.45 N]

Operating Temperature—

55°C to 85°C [131°F to 185°F]

The Tyco Electronics line of Test

Probe Receptacles is designed

to pro-vide low-cost test probe

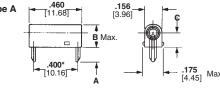

capability of circuits on pc

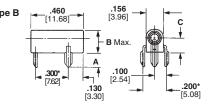

boards, with-out interruption

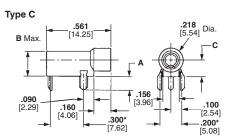

legs. Two legs of a tri-leg mount are not part of the live testing circuit. Receptacles are also available either in the standard height, or in a taller height (to permit probing at any position on the board where clearance to probe is necessary). The three-leg mount gives maximum

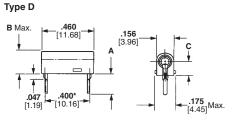

stability. The two-leg mount vields maximum density.

The present line of test probe receptacles fits a range of board thicknesses from 1/32 to 1/8 depending on the length of the receptacle legs. The legs mount in .052 [1.32] diameter holes.

*Mounting hole location for .050-.054 [1.27-1.37] dia. holes.

Power Taps

Product Facts

- ACTION PIN contacts eliminate soldering
- Provides high current, separable connection to pc board traces
- Wire-to-board connection using common terminals
- All metal-to-metal assembly for long-term integrity
- Standard DIP outlines (.300 x .100 [7.62 x 2.54]), 10 positions, and .250 x .125 [6.35 x 3.18], 6 and 10 positions, plus high current versions on .400 x .200 [10.16 x 5.08] footprint in 4 and 6 positions, .300 x .100 [7.62 x 2.54] in 8 positions, and both 2 and 3 position in-line .100 [2.54] tab taps
- **■** Low resistance interface
- Internally threaded tap to secure screw to terminal
- Anti-rotational embossments hold wire and terminal in place
- Standard Power Taps rated at 2.5 amps per pin-6 position 15 amps. 10 position 25 amps current carrying capability
- High Current Power Taps rated at up to 5 amps per 2 position 10 amps. 3 position 15 amps. 4 and 6 position 20 amps and 8 position 40 amps

Tyco Electronics Power Taps are designed for the growing need for power to printed circuit board applications required in today's electronic industry. The taps provide a high current, separable connection to a pc board. Pin configuration is of the standard DIP outline with .300 x .100 [7.62 x 2.54] or .250 x .125 [6.35 x 3.18] for the Standard versions, plus .400 x .200 [10.16 x 5.08], .300 x .100 [7.62 x 2.54] and in-line spacing for the High Current versions.

ACTION PIN contacts provide a low resistance interface with tin platedthrough holes in the pc board, thereby eliminating the need for soldering.

The variety of available power taps allow for various installation schemes. The Uninsulated Tap and Low Profile Tap can be used in bus bar pattern. The High Profile and Low Profile Taps offer insulation protection from other components. The High Current versions provide a greater power

density option with current ratings from 10 amps on the 2 position in-line .250 [6.35] tab tap up to 40 amps on the 8 position dual .250 [6.35] tab tap.

All Tyco Electronics Power Tap configurations are easily inserted into the pc board with a simple Tyco Electronics or customer supplied tool.

Catalog 82159 Revised 12-07

www.tycoelectronics.com

Dimensions are in inches and millimeters unless otherwise specified. Values in brackets are metric equivalents.

Dimensions are shown for reference purposes only. Specifications subject to change.

USA: 1-800-522-6752 Canada: 1-905-470-4425 Mexico: 01-800-733-8926 C. America: 52-55-1106-0803

AMPOMATOR CLS IV+ Lead-Making Machines, Part Nos. 356500-1, -2

AMP-O-LECTRIC Model "G" Terminating Machines. Part Nos. 354500-1, -9, -11

Semiautomatic bench machines for crimping reeled terminals and contacts, featuring a quiet and reliable direct motor drive. microprocessor controls for ease of setup and operation, and quarding and lighting designed for operator convenience. All models are equipped with either manual or automatic precision adjustment of crimp height. Machine-mounted sensors are available for crimp quality monitoring using conventional miniature-style applicators. For more information, request Catalog **65828**.

Application Tooling

Fully-automatic machines that measure, cut, strip and terminate single leads. Microprocessor-controlled. and programmed and operated using an easy-to-follow, menu-driven touch-screen. Features include directdrive terminating units with precision crimp height adjustment, fully programmable setups, wire runout and splice detection, and motorized pre-feed with wire straightener. Crimp quality monitoring is also available. For more information, request Catalog 124324.

Semiautomatic bench crimping machines that also strip the wire, and are therefore used for terminating jacketed cable. Feature manual precision adjustment of crimp height, keyed strip blades for faster, more accurate setups, and an efficient scrap removal system. All adjustments can be made from the front of the machines without special tools. Available with crimp quality monitoring.

For more information, request Catalog 65004.

AMP 3K/40 and AMP 5K/40 Terminating Machines

As a value oriented terminator, the AMP 3K/40 and AMP 5K/40 terminators are designed for customers that require the increased output and quality of a semiautomatic machine at a competitive price. By incorporating the most commonly requested features as standard and offering a long list of optional equipment, these terminators offer flexibility to meet the specific needs of various applications at the lowest possible cost. For more information, request Catalog **1654856**.

Optional Stripping Module for the AMP 3K/40. AMP 5K/40 and AMP-O-LECTRIC Model "G" **Terminating Machines**

The combination of the Stripping Module with the AMP-O-LECTRIC Model "G" Terminator or the AMP 3K/40. and AMP 5K/40 terminating machines provides an economical, proficient method of stripping wire and crimping terminals on the same machine. Wires are stripped moments before crimping, meaning there is virtually no chance of damaging wire conductors during handling or storage. Once the wire is fed into the start sensor, the Stripping Module does the rest, improving placement accuracy.

For more information, request Catalog 1309085.

Note: Part Numbers are RoHS compliant except: ♦ Indicates non-RoHS compliant.

Application Tooling (Continued)

Applicators

Applicators manufactured from high grade tool steels, and processed through state-of-the-art CNC equipment for tightest tolerances. Made for high repeatability and fast throughput.

We offer an unmatched selection of applicator styles and terminals types, with configurations for both Tyco Electronics and other manufacturers' terminals. For more information, request Catalogs **296393** and **296393-2**.

The EDGE, Electronic **Applicator Counter**

The new, versatile EDGE applicator counter tracks wearable tool usage for the most effective maintenance planning. The completely electronic counter, with clear LCD display, indicates cycles since installation. By performing maintenance at measured intervals with pre-set limits, operators avoid breakdowns and rejects caused by tool wear or mis-adjustment. For more information, request Catalog **1773385**.

CERTI-CRIMP Straight Action Hand Tools (SAHT)

Premium grade hand tools featuring ratchet control to provide complete crimp cycle. Die sets close in a straight line. Include a contact locator and wire stop, plus an insulation crimp adjustment lever, when applicable. Approximate weight 1.3 lb [0.59 kg] For more information, request Catalog **65780**.

Application Tooling (Continued)

AMP-O-MATIC "U" Frame Machine Part No. 691679-1 (Installs Board Mount Receptacles)

Product Specifications

Weight — 50 lbs.

Width — 18

Height — 23

Depth — 19

Air Supply — 80 psi

Electrical Power — 115 VAC, 60 Hz

These insertion machines install contacts into printed circuit boards at rates to 2000 per hour. A spotlight highlights the insertion area and a lower tooling assures precise board location. The machines are actuated by a foot pedal and are bench mounted.

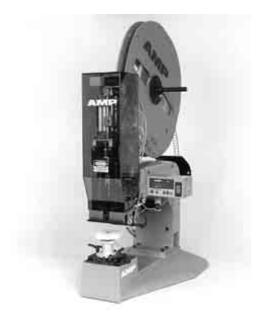

Comp-U-Sertor II Machines, Part Nos. 122300-1, -2

Microprocessor-controlled X-Y positioning table inserts a variety of products into pc boards, including .0252 stamped or bandoliered posts, mini-spring sockets, and FASTON tabs. Insertion heads for various products are interchangeable, and can be used with bench machines. Controlled, programmed and operated using an interactive touchscreen. Options include double-action clinch tooling, powered dereeler, splice run-out detector, take-up winder for paper tape, and scrap chopper. For more information, request Catalog **296059**.

| | |

Bench machines for inserting a variety of products into pc boards. Uses the same interchangeable insertion heads as the Comp-U-Sertor II Machines. Series 217600 features a manually-operated X-Y positioning fixture and locator spotlight. The machine cycles when the board hole is placed on the anvil and both triggers on the dual handles attached to the X-Y fixture are depressed. Series 662820, without board fixturing, cycle automatically when the hole is properly located. A stabilizing disk over the anvil helps keep the board level. For more information, request Catalog **296059**.
