Description

The LM2904A/2902A series of amplifiers are the newest high-supply voltage amplifiers with low offset, low power, and stable frequency response. They incorporate 3PEAK's proprietary and patented design techniques to achieve very good AC performance with 0.9-MHz bandwidth and 0.5-V/µs slew rate. The input common-mode voltage range extends to V–, and the outputs swing rail-to-rail. The LM2904A/2902A family can be used as plug-in replacements for many commercially available op-amps to reduce power and improve input/output range and performance.

The combination of features makes the LM2904A/2902A ideal choices for the power module, industrial control, motor control, and audio applications.

2023-06-01	Rev.A.1.	The following updates are all about the new datasheet formats or typo, the actual product remains unchanged. Updated address of web site. Updated tape and reel information. Updated status of LM2902A-TS2R-S and LM2902A-SO2R-S, the Q100 test is finished.

Absolute Maximum Ratings (1)

Parameters	Rating
Supply Voltage, $(+V_S)$– $(-V_S)$	40 V
Voltage on Input Pin and Output Pin	$(-V_S)$ − 0.3 to $(+V_S)$ + 0.3
Differential Input Voltage	$(-V_S)$ − $(+V_S)$ to $(+V_S)$ − $(-V_S)$
Input Current: +IN, –IN Note 2	±10mA
Output Short-Circuit Duration Note 3	Infinite
Maximum Junction Temperature	150°C
Operating Temperature Range	−40 to 125°C
Storage Temperature Range	−65 to 150°C
Lead Temperature (Soldering, 10 sec)	260°C

Note 1: Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

Note 2: The inputs are protected by ESD protection diodes to each power supply. If the input extends more than 300 mV beyond the power supply, the input current should be limited to less than 10 mA.

Note 3: A heat sink may be required to keep the junction temperature below the absolute maximum. This depends on the power supply voltage and how many amplifiers are shorted. Thermal resistance varies with the amount of PC board metal connected to the package. The specified values are for short traces connected to the leads.
