Normally closed type with reinforced insulation

## PhotoMOS ${ }^{\text {© }}$

## GE 1 Form B (AQY41OEH)

mm inch

RoHS compliant

## FEATURES

## 1. 1 Form B output type

2. Low on-resistance

This has been realized thanks to the built-in MOSFET processed by our proprietary method, DSD (Doublediffused and Selective Doping) method.

3. Reinforced insulation of $5,000 \mathrm{~V}$

More than 0.4 mm internal insulation distance between inputs and outputs. Conforms to EN41003, EN60950 (reinforced insulation).
4. Controls low-level analog signals PhotoMOS feature extremely low closedcircuit offset voltage to enable control of low-level analog signals without distortion.

## 5. High sensitivity and low onresistance

Can control max. 0.55 A load current with 5 mA input current.
Low on-resistance of Typ. $1 \Omega$
(AQY412EH).
6. Low-level off-state leakage current

## TYPICAL APPLICATIONS

- Power supply
- Measuring equipment
- Security equipment
- Modem
- Telephone equipment
- Electricity, plant equipment
- Sensing equipment

*Indicate the peak AC and DC values.
Note: For space reasons, the initial letters of the part number "AQY", the surface mount terminal shape indicator "A" and the packing style indicator " $X$ " or " $Z$ " are not marked on the device. (Ex. the label for product number AQY412EHAX is 412 EH .)
