

MC34119

LINEAR INTEGRATED CIRCUIT

LOW POWER AUDIO AMPLIFIER

DESCRIPTION

The UTC **MC34119** is a low power audio amplifier IC intended for the telephone applications, such as in speakerphones. It provides differential speaker outputs to maximize output swing at low supply voltages. Coupling capacitor to the speaker is not required. Open loop gain is 80dB, and the closed loop gain is set with two external resistors. The Mute pin permits powering down and/or muting the input signal.

FEATURES

- * Wide operating supply voltage: $V_{CC}=2V\sim 16V$
- * Low quiescent supply current ($I_{CC}=2.7mA$, typ)
- * Medium power output over 250mW at $V_{CC}=6V$, $R_L=32\Omega$, THD < 10%
- * Load impedance range (8 $\Omega\sim 100\Omega$)
- * Low total harmonic distortion (0.5% typ)
- * Mute function ($I_{CC}=65\mu A$, typ)
- * Minimum number of external parts required

PIN CONFIGURATION

PIN DESCRIPTION

PIN NO.	PIN NAME	DESCRIPTION
1	Mute	This pin can be used to power down the IC to conserve power, or for muting, or both. When at a logic "LOW" (less than 0.8V), the IC is enabled for normal operation. When at a logic "HIGH" (2V to V _{CC}), the IC is disabled. If Mute is open, that is equivalent to a logic "LOW".
2	Ripple Rejection	A capacitor at this pin increase power supply rejection, and affects turn-on time. This pin can be left open if the capacitor at pin 3 is sufficient.
3	Input(+)	Analog Ground for the amplifiers. A 1μF capacitor at this pin (with a 5μF capacitor at pin 2) provides 52dB(typ) of power supply rejection. Turn-on time of the circuit is affected by the capacitor on this pin. This pin can be used as an alternative input.
4	Input(-)	Amplifier input. The input capacitor and resistor set low frequency roll-off and input impedance. The feedback resistor is connected between this pin and output 1.
5	Output 1	Amplifier output 1. The DC level is about (V _{CC} -0.7V)/2.
6	V _{CC}	DC supply voltage is applied to this pin (V _{CC} =2~16V).
7	GND	Ground pin.
8	Output 2	Amplifier output 2. This signal is equal in amplitude, but 180° out of phase with that output 1, the DC level is about (V _{CC} -0.7V)/2.
