Note 1. V_{BR} measured after I_T applied for 300us, I_T =square wave pulse or equivalent

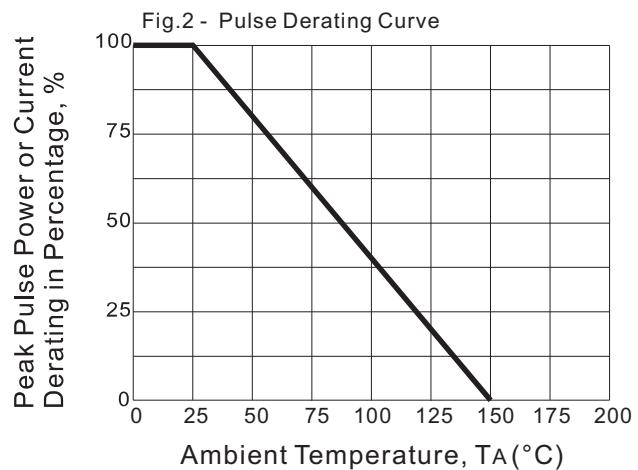

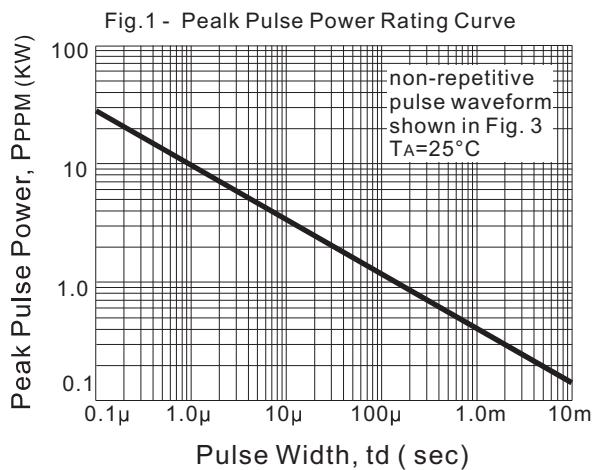

2. Surge current waveform per Fig. 3 and derated per Fig. 2

3. For bi-directional types having V_{RWM} of 10 volts and less, the I_R limit is doubled

4. Suffix 'C' denotes bi-directional devices. Suffix 'A' denotes 5% tolerance devices, no suffix denotes 10% tolerance devices.

5. All terms and symbols are consistent with ANSI/IEEE C62.35

6. Transient Voltage Suppressors (TVS) are devices used to protect vulnerable circuits from electrical overstress such as that caused by electrostatic discharge, inductive load switching and induced lightning. Within the TVS, damaging voltage spikes are limited by clamping or avalanche action of a rugged silicon pn junction which reduces the amplitude of the transient to a nondestructive level. See Fig. 7 & Fig. 8
