

### Half-Bridge IPM

### General Description

The LP1130A is a high efficiency synchronous buck power stage module consisting of two asymmetrical MOSFETs and an integrated driver. The MOSFETs are individually optimized for operation in the synchronous buck configuration. The high side and low side MOSFETs has ultra low  $R_{DS(ON)}$  to minimize conduction losses.

A number of features are provided making the LP1130A a highly versatile power module.

### Features

- ◆ Up to 30V DC VIN voltage
- ◆ 4.6V to 13.2V supply voltage
- ◆ Up to 5A output current
- ◆ Up to 500kHz Switching Frequency
- ◆ 3.3V/5V logic input compatible
- ◆ Disable function
- ◆ ROHS compliant and Lead(Pb)- free

### Functional Pin Description

Package Type		Pin Configurations
SOP-8		
Pin	Name	Description
1	BST	Upper MOSFET Floating Bootstrap Supply. A capacitor connected between BST and SW pins holds this bootstrap voltage for the high-side MOSFET as it is switched. The recommended capacitor value is between 100nF and 1.0μF. An external diode is required with the LP1130A.
2	PWM	Logic-Level Input. This pin has primary control of the drive outputs.
3	EN	Active high output enable. When low, normal operation is disabled.
4	VCC	Input Supply. A 1.0μF ceramic capacitor should be connected from this pin to PGND.
5,6	SWN	Switch Node. Connect to the source of the upper MOSFET.
7	PGND	Power Ground. Should be closely connected to the source of the lower MOSFET.
8	VIN	Source for the upper MOSFET
