9.4.Mounting :

This component is designed for automatic insertion.  
However, you are requested to do the trial with your insertion machine in order to be Sure of proper operation and no damage of component.  
Please pay attention to board warp which may damage the component and cause Soldering Process.  
Avoid mounting and processing by Ultrasonic welding because this method has a Possibility of an excessive vibration spreading inside the crystal products and Becoming the cause of characteristic deterioration and not oscillating.

9.5.Cleaning :

Cleaning liquid which corrodes Nickel shall not be used.  
It may cause the problem on the surface, color, marking etc.  
Ultra-sonic cleaning is possible, however, you are requested to check on your board. Because we only checked as single unit.

9.6.Handling :

HSO321S series is designed to withstand Drop and Vibration, however, the crystal blank might be broken. So, if excess force is given, please check the characteristics before use. HSO321S series has C-MOS circuit inside. Please pay attention to static-electricity as same handling as other C-MOS. devices.

9.7.By-pass Capacitor :

It has no by-pass capacitor integrated. We recommend you to use capacitor (like ceramic chip capacitor) 0.01µF in-between Vdd and GND.

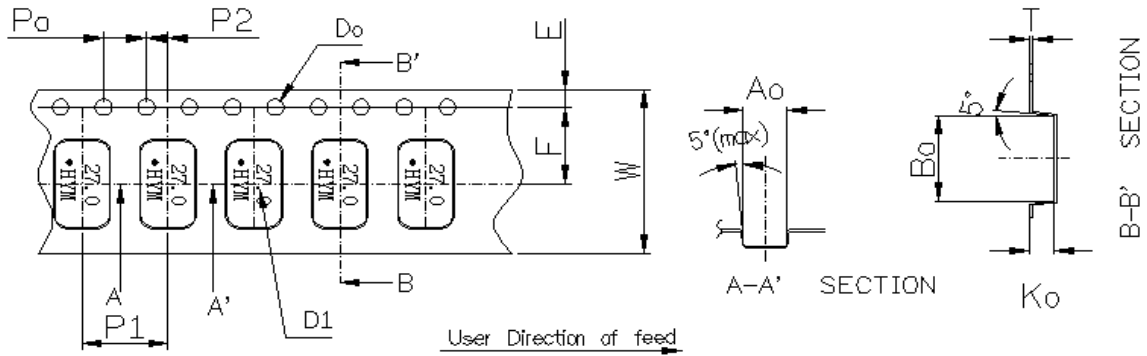

9.8.Storage :

Please keep away from high temperature and high humidity, which may cause put solderbility. No direct Sunlight, No dew as well.
