# ALUMINUM ELECTROLYTIC CAPACITORS SPECIFICATION SHEET

CUSTOMER PART No.		
Rubycon PART No.	YXA SERIES (PET sleeve type)	
DRAWING No.	REE - 033812	ISSUE No. 1
ISSUE DATE	10 JANUARY 2008	

**RUBYCON CORPORATION**  
ENGINEERING DIVISION

1938-1, NISHIMINOWA, INA-SHI, NAGANO-KEN, JAPAN

TEL No. 0265-72-7116

FAX No. 0265-73-3380

DESIGN	SEIJI IWAI
CHECK	TETSUYA MIZU
APPROVAL	YOSHINORI SASAKI

## 1. Scope.

This specification covers polarized aluminum electrolytic capacitors with non-solid electrolyte for use in electronic equipments .

## 2. Reference Standard

JIS C 5141 (1991) and JIS C 5102 (1994) methods for testing.

## 3. Operating Temperature Range

-55°C to +105°C (6.3 to 100 V.DC.), -40°C to +105°C (160 to 250 V.DC.), -25°C to +105°C (350 to 450 V.DC.)

## 4. Performance Refer to Table-1

## 5. Style and Numbering System

(1) Style CE 04 (Radial Leaded)

(2) Numbering System	Rated Voltage	Series	Nominal Capacitance	Tolerance	Option code	Lead Forming	Case size
	□□□	<u>YXA</u>	□□□	<u>M</u>	<u>EFC</u>	□□	□□□ X □□□

## 6. Marking

Unless otherwise specified, capacitor shall be clearly marked the following items on its body.

Sleeve color: Black

Lettering color: White

- (1) Trade mark
- (2) Rated Voltage
- (3) Nominal Capacitance
- (4) Polarity
- (5) Series
- (6) Lot Number
- (7) Maximum Operating Temperature
- (8) PET sleeve mark

**Rubycon**

(Negative Polarity)

YXA

105°C

PET

## 7. Vent

On capacitors whose diameter is 6.3mm and greater, a safety vent shall be provided.

## 8. Notes on use of aluminum electrolytic capacitors

## (1) Charge and discharge

Do not use for the circuit that repeats quick charge or discharge.

## (2) External stress

Do not apply excessive force of pushing, pulling bending, and/or twisting to the main body, lead wire and terminals.

## (3) Heat resistance at soldering process

In the soldering process of PC board with Capacitors mounted, secondary shrinkage or crack of sleeve may be observed when soldering temperature is too high and /or soldering time is too long.

If lead wire of other components or pattern of double sided PC board touches the capacitor, the similar failure may be also originated at pre-heating, heating at hardening process of adhesive and soldering process.

## (4) Insulation and PC board mounting

Sleeve is for marking purpose only.

It is not recognized as insulation materials.

When double sided PC board is employed, note that it could cause a short circuit if lead wire of other components or pattern of double sided PC board touches capacitor. Please avoid circuit pattern runs underneath capacitor.

In addition, case and cathode terminal are not insulated.

## (5) Adhesives and coating materials

Do not use the adhesives and coating materials that contain halogenated organic solvents or chloroprene as polymer.

## (6) Storage

Keep at a normal temperature and humidity. During a long storage time, leakage current will be increased. To prevent heat rise or any trouble that high leakage current possibly causes, voltage treatment is recommended for the capacitors that have been stored for a long time.

## &lt;Storage Condition&gt;

\*Aluminum electrolytic capacitors should not be stored in high temperatures or where there is a high level of humidity. The suitable storage condition is 5°C-35°C and less than 75% in relative humidity.

\*Aluminum electrolytic capacitors should not be stored in damp conditions such as water, saltwater spray or oil spray.

\*Do not store aluminum electrolytic capacitors in an environment full of hazardous gas (hydrogen sulfide, sulfurous acid gas, nitrous acid, chlorine gas, ammonia or bromine gas).

\*Aluminum electrolytic capacitors should not be stored under exposure to ozone, ultraviolet rays or radiation.

YXA SERIES

**Rubycon**  
RUBYCON CORPORATION

(7) Fumigation and halogenated flame retardant

It may cause corrosion of internal electrodes, aluminum cases and terminal surface when the following conditions exist.

\*Fumigation of wooden pallets before shipment to disinfect vermin.

\*Existence of components or parts that contain halogenated flame retardant agent (bromine etc.) together with capacitors.

\*When halogenated detergents or antiseptics for preventing infection of epidemic diseases contact directly to capacitors.

(8) PC board cleaning after soldering

Please consult us when cleaning is subjected.

◆Guide to application except the above are described in our catalog and EIAJ RCR-2367C

EIAJ RCR-2367C: "Safety Application Guide for fixed aluminum electrolytic capacitors for use in electronic equipment."

## 5 Terminal Strength

&lt;Condition&gt;

## Tensile Strength of Terminals

The body of capacitor shall be fixed and the tensile force of following table shall be applied to the terminal in lead out direction of the terminal for  $10 \pm 1$  seconds.

## Bending Strength of Terminals

The body of capacitor shall be held in such a way that the regular lead-out axis of lead wire terminal becomes vertical. The weight of following table shall be suspended from the end of terminal. In this condition, after the body of sample is bent through 90 degrees, it shall be returned to the original position. Next the body shall be reversibly bent through 90 degrees and again returned to the original position.

Diameter of lead wire	Tensile force N{kgf}	Bending force N{kgf}
0.5mm and less	5{0.51}	2.5{0.25}
Over 0.5mm to 0.8mm incl	10{1.0}	5{0.51}

&lt;Criteria&gt;

Notable changes shall not be found, as breakage or looseness in the terminal.

## 6 Temperature Coefficient and Drift

&lt;Condition&gt;

STEP	Testing Temperature (°C)	Time
1	20±2	Time to reach thermal equilibrium
2	-40±3	//
3	-25±3	//
4	20±2	//
5	105±2	2 hrs.
6	20±2	Time to reach thermal equilibrium

Capacitance, D.F. and Impedance shall be measured at 120Hz.

Rated voltage 160 to 450 WV : Except Step 2.

&lt;Criteria&gt;

STEP 2,3	Impedance Ratio	The value of ratio to STEP 1 not more than value of following table
STEP 5	Capacitance Change	6.3 to 100WV : Within $\pm 25\%$ of the value of STEP 1 160 to 450WV : Within $\pm 20\%$ of the value of STEP 1
	Dissipation Factor	Not more than the specified value
	Leakage Current	Not more than 8 times the specified value
STEP 6	Capacitance Change	Within $\pm 10\%$ of the value of STEP 1
	Dissipation Factor	Not more than the specified value
	Leakage Current	Not more than the specified value

WV(V.DC)	6.3	10	16	25	35	50	63	100	160

< Temperature Coefficient >

Ambient Temperature(°C)	105	85	65≥
Coefficient	1.0	1.7	2.1

◇Temperature coefficient shows a limit of ripple current exceeding the rated ripple current that can be passed through a capacitor at each temperature when the life expectancy of a capacitor becomes to be nearly equal with the lifetime at the rated maximum operating temperature.

◇Use of aluminum electrolytic capacitor under ripple voltage with wide amplitude is equivalent to quick charge-discharge operation.  
When ripple voltage with the amplitude over 70Vp-p is expected for the products with rated voltage over 100V, please contact us.

9. Diagram of dimensions. :unit mm
