## GENERAL

The EA KIT129 graphics kit is a fully assembled control and operating unit with a variety of integrated functions. The display has very compact dimensions and offers excellent super-twist contrast, which means the unit can be put into operation immediately. It is controlled via the standard RS-232 or RS-422 interface. In addition to complete graphics routines for display output, the graphics kit also contains a wide variety of fonts. Graphics command similar to those used in high-level programming languages are used for programming. There is thus no longer any need for the time-consuming programming of character sets and graphics routines. The ease of use offered by macros and input via touch panel make it a real power display.

## HARDWARE

The graphics kit is designed for an operating voltage of +5 V . A supply voltage of $9 . .35 \mathrm{~V}$ is also possible.
Serial asynchronous data transfer is carried out in RS-232 format. The transmission format is set permanently to 8 data bits, 1 stop bits, and no parity. A transimssion rate of between 1,200 and 115,200 baud can be selected by means of DIP switches. RTS and CTS handshake lines are available.

Data format:

## ELECTRONIC ASSEMBLY

$\longrightarrow$ Startbit $/$ Do
D1 D2
D3
D4 D5

D6
D7 Stopbit

## TOUCH PANEL

The EA KIT129 versions are equipped with an integrated touch panel. You can make entries and choose menu settings by touching the display. The labeling of the "keys" is flexible and can also be changed during runtime (different languages, icons). The drawing of the individual "keys" and the labeling or grouping of several fields is handled by the integrated software.

## SOFTWARE

The graphic kits are programmed by means of commands such as Draw a rectangle from $(0,0)$ to $(64,15)$. No additional software or drivers are required. Strings can be placed withpixel accuracy. Text and graphics can be combined at any time. Up to 16 different character sets can be used. Thus, when the 8 -times zoom is used with the largest character set ( $8 x 16$ ), the words and numbers fill the screen (128x64).

## CONTRASTADJUSTMENT

Contrast will be adjusted via built in potentiometer. Thanks to the onboard special temperature compensation circuit there's no need for any further adjustment, even temperature changes over the whole range of $-20 \sim+70^{\circ} \mathrm{C}$.

## BLUE-WHITE ANDBLACK\&WHITE (DIFFERENCE)

The blue-white version EA KIT129-6LWTP is recommanded for all indoor-applications with and without any room illumination.
The black\&white FSTN-versionEA KIT129J-6LWTP was specially developed for outdoor-applications. This kind of display can be read even under extrem bright sunlight conditions. It can be used without backlight also (even in direct sunlight!).

## ACCESSORIES

## Floppy disk for creating macros

A floppy disk (EA DISK240) is required for macro programming*). This converts the commands entered in a text file into a code that can be read by the graphics kit, and programs them into the EEPROM.
Cable for PC
To enable simple connection to PCs (macro programming), we provide a 1.5 m cable and a 9-pin SUB-D female connector (EA KV24-9B). Simply insert it into COM 1 or COM 2 and get started.

## EA KIT129-6

## ELECTRONIC ASSEMBLY

## EXTERNLA KEYBOARD(EA KIT129-6LW ONLY)

A keyboard (anything from individual keys to a 3x5 matrix keyboard, J4) can be connected at the plug-in connection. The connected keys are debounced by means of software. Please note that it is only possible to connect an external keyboard to versions without an integrated touch panel.
Each key is switched between an output and an input. Each input has a $100 \mathrm{k} \Omega$ pullup. Up to 5 keys can be connected at each output.
To find out double-key-strokes all outputs must be decoupled by a

| Matrix Keypad Connector |  |  |
| :---: | :---: | :---: |
| J4 |  |  |

| 6 | OUT 3 | Output Line 3 |
| 7 | IN 4 | Input Column 4 |
| 8 | NC | not Connected |
| 9 | IN 5 | Input Columne 5 |
| 10 | NC | not Connected | Schottky-Diode (e.g. BAT 46).

#### Abstract

Transmitting the keystrokes At each keystroke, the associated key number (1..15) is transmitted or an internal Touch Makro (only if defined) will be started. The release of the key is not transmitted. If the release of the key is to be transmitted as well, this can be done by defining touch macro no. 0 . The automatic keyboard scan can be deactivated by means of the command "ESC T A 0". If the handshake line (e.g. CTS) does not permit transmission, keystrokes can be lost. The key number can be determined as follows:

## Key number = (output -1) * 5 +input

(output: a number between 1 and 3; input: a number between 1 and 5).

## TOUCH PANEL(EA KIT129X-LWTP ONLY)

Versions EA KIT129-6LWTP and KIT129J-6LWTP are supplied with an integrated touch panel with 15 fields. The graphics kit offers convenient commands supporting this touch panel. It is possible, for example, to group a number of touch fields to form a single large key and then draw and label the key. You can also assign a record code (1..255) to the key you have defined. If a return code of 0 is assigned, the key is disabled and has no effect when it is pressed.
When the touch keys are touched, they can be automatically inverted and a tone can sound, indicating they have been touched. At the same time, the defined return code of the key is transmitted via the serial interface, or an internal touch macro with the number of the return code is started.
Example:
Definition of a key from field 3 to 9 with the return code $65={ }^{\prime} A^{\prime}$ and the text "STOP". Note: Before individual keys are defined, all fields should be disabled by means of "ESC T R".

| Example | Codes to be output |  |  |  |  |  |  |  |  |  |  |  | Note |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| For compiler | \#TH 11, 21, 'A', 2, "STOP" |  |  |  |  |  |  |  |  |  |  |  | The end code 0 is not specified here |
| As ASCII | ESC | T | H | . | . | A | . | S | T | 0 | P | . | The dots '.' stand for ASCII characters that are not to be displayed |
| In hex <br> In decimal | $\left\lvert\, \begin{gathered} \$ 1 \mathrm{~B} \\ 27 \end{gathered}\right.$ | $\begin{gathered} \$ 54 \\ 84 \end{gathered}$ | $\begin{gathered} \$ 48 \\ 72 \end{gathered}$ | $\left.\begin{gathered} \$ 0 B \\ 11 \end{gathered} \right\rvert\,$ | $\left.\begin{gathered} \$ 15 \\ 21 \end{gathered} \right\rvert\,$ | $\begin{gathered} \$ 41 \\ 65 \end{gathered}$ | $\left.\begin{gathered} \$ 02 \\ 2 \end{gathered} \right\rvert\,$ | $\left.\begin{gathered} \$ 53 \\ 83 \end{gathered} \right\rvert\,$ | $\begin{gathered} \$ 54 \\ 84 \end{gathered}$ | $\begin{gathered} \$ 4 F \\ 79 \end{gathered}$ | $\begin{gathered} \$ 50 \\ 80 \end{gathered}$ | $\begin{gathered} \$ 00 \\ 0 \end{gathered}$ |  |
|  | $\begin{array}{\|l\|} \hline 0 \\ \hline 0 \\ 0 \\ 0 \\ 0 \\ \hline 0 \\ \hline \end{array}$ |  |  |  |  | $\begin{array}{\|c} \hline 50 \\ \hline 0.0 \\ 0 \\ \hline 0 \end{array}$ |  |  |  |  |  |  |  |

## EA KIT129-6

## BAUD RATES

The baud rate can be set by means of the 3 DIP switches on the left. 9,600 baud is set at the factory (DIP 3ON). Please note that the internal data buffer only holds 16 bytes. It is therefore imperative that the RTS handshake line be queried (alevel of +10 V means data can be accepted; a level of -10 V means the display is busy). The data format is fixed at 8 data bits, 1 stop bit and no parity.

## WRITEPROTECTIONFORPROGRAMMEDMACROS

You can use DIP switch 6 to prevent the programmed macros, images and fonts from being inadvertently overwritten.

| Write protection |  |
| :---: | :---: |
| DIP | $\begin{array}{c}\text { Write protection } \\ \text { for }\end{array}$ |
| 6 | EEPROM |$]$| On |
| :---: |
| ON |
| No macro progr. possible |

| Baud rates |  |  |  |
| :---: | :---: | :---: | :---: |
| DIP switches  Data format <br> $8, N, 1$   |  |  |  |
| 1 | 2 | 3 | 1200 |
| ON | ON | ON |  |

| ON | OFF | ON | 4800 |
| OFF | OFF | ON | 9600 |
| ON | ON | OFF | 19200 |
| OFF | ON | OFF | 38400 |
| ON | OFF | OFF | 57600 |
| OFF | OFF | OFF | 115200 |

## SUPPLY VOLTAGE / EA OPT-9/35V

Inthe standardmodel, the supply voltage of +5 V is fed in via screw-typeterminal J1. Inthe case of the version for $9 . .35 \mathrm{~V}=$ (EA OPT-9/35V), the power is supplied via J 1 also.
Important: It is imperative that the polarity is correct. Polarity reversal, evenforavery shorttime, can cause the immediate destruction of the entire display.

## RS-232 CONNECTION

The graphics kit is shipped with an RS-232 interface as standard. The pin assignment of the plug connector (J3) is as shown in the table on the left. The J3 has a 2.54 mm grid.
The same serial data with 5 V levels and CMOS logic is available at the J 5 eyelet strip. These levels are suitable for direct connection to a $\mu \mathrm{C}$. However, if these signals are used, solder link RxD and CTS must be cut or opened.
Please note that the internal data buffer only holds 16 bytes. It is therefore imperative that the RTS handshake line be queried (a level of +10 V means data can be accepted; a level of -10 V means the display is busy). The data format is fixed at 8 data bits, 1 stop bit and no parity.

| RS-232 J3 connection |  |  |  |
| :---: | :---: | :---: | :--- |

## ELECTBONC ASSEMBLY

## DIGITLINPUTS AND OUTPUTS

EA KIT129 provides 8 digital in- or outputs (5V CMOS level, grounded). Definition for each line as an In-or Output can be done at any time. Connection will be done via J 120 as a $2 \times 5$ double row pin header.

| In- and Output J120 |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Pin | Symbol | Function | Pin | Symbol | Function |
| 1 | VDD | +5V Supply | 2 | 101 | Port 1 |
| 3 | 102 | Port 2 | 4 | 103 | Port 3 |
| 5 | 104 | Port 4 | 6 | 105 | Port 5 |
| 7 | 106 | Port 6 | 8 | 107 | Port 7 |
| 9 | 108 | Port 8 | 10 | GND | 0V, Ground |

## 8 inputs

Factory-set all lines are set to input (internally pulled-up). However, the inputs will be queried and evaluated directly via the serial interface ("ESC Y R"). Additionally to that a voltage of $>4 \mathrm{~V}$ starts an internal port macro (if defined). When the 8 lines are combined, up to 256 port macros can thus be addressed. Each of these port macros can change the contents of the screen or switch an output, thus enabling a wide range of control functions. To create the port macros you need a PC and the EA DISK240*) floppy disk. You will find a more detailed description on page 6. The automatic port query can be disabled by means of the "ESCYA0" command. Note: The logic circuitry is designed for slow operations; in other words, more than 3 changes per second cannot be easily executed. If an input is left open, it is logical high (internaly pulled-up via 100 kOhm).

## 8outputs

Writing the command "ESC Y M anz" will redefine one or more line as an output. Upper lines will be outputs and lower lines stay as inputs. Command "ESC Y M2" for example defines IO8 and IO7 as output lines and IO1~6 will stay as inputs.
Each (re-defined) line can be controlled individually using the "ESC Y W" command. A maximum current of 10 mA can be switched per line. Please note that these 10 mA are valid for L-level; H-level will drive some hundrets of $\mu \mathrm{A}$ only. For more power use an external transistor or MOSFET.

## DEFAULTSETTINGS

After power-on or a manual reset, the registers shown here are set to a specific value.
Please note that all the settings can be overwritten by creating a power-on macro (normal macro no. 0).

| Default settings |  |  |
| :--- | :---: | :---: |
| Register | Command | after <br> power-on / reset |
| Text mode | ESC L | set, black |
| Terminal font | ESC FT | Font 3, no zoom |
| Cursor | ESC QC | on |
| Flashing frequ. | ESC QZ | 0.6 sec. |
| Graphics <br> mode | ESC V | set |
| Graphics font | ESC F | Font 3, no zoom |
| Last xy | ESC W | (0;0) |
| Bargraph 1/2 | ESC B | undefined / unchanged |
| Selekt/deselekt | ESC K | selected |
| VO 1..8 | ESC Y | 8 inputs |

## MACROPROGRAMMING

Single or multiple command sequences can be grouped together in macros and stored in the EEPROM. You can then start them by using the Execute macrocommands. There are 4 different types of macros: Touch macros(1..255)
These are started when you touch a touch field (in versions with a touch panel - TP) or when you operate an external key/matrix keyboard. Touch macro no. 0 is different: It is started when you release any key. Port macros (0..255)
These are started when voltage is applied to IN 1..8.
Normal macros (1..255)
These are started by means of a command via the serial interface or from another macro. A series of macros occurring one after the other can be called cyclically (movie, hourglass, multi-page help text).
Power-on macro
Normal macro no. 0 is different: It is executed automatically after power-on. It allows you to switch off the cursor and define an opening screen, for example.
Note: Programming an endless loop in Power-On-Macro makes the display non-accessible. In that case switch DIP 5 to ON position, power off, and then power on again and DIP 5 back to off position. Now all fonts and macro must be downloaded again.

## STORING 256 IMAGESINTHE EEPROM

To reduce the transmission times of the serial interface or to save storage space in the processor system, up to 256 images can be stored in the internal EEPROM. They can be called using the "ESC U E" command via the serial interface or from within a touch/port/normal macro. All the images can be used in the Windows BMP format. They can be created and edit using widely available software such as Windows Paint or Photoshop.

## CREATING INDIVIDUALMACROS

To create your own macros, you need the following:

- the EA DISK240*) floppy disk, which contains the compiler, examples and fonts
- a PC with a COM1 or COM2 serial interface and approximately 500KB hard disk space
- a text editor such as WordPad or Norton Editor

To define a sequence of commands as a macro, all the commands are written to a file on the PC (e.g. DEMO.KMC). You specify which character sets are to be integrated and which command sequences are to be in which macros.
Once the macros are defined, you start the program KITCOMPILER.EXE. This creates an EEPROM file called DEMO.EEP, which is then automatically stored in the display EEPROM with the baud rate entered. This only takes a few seconds, and you can
 then use your user-defined macros immediately. You will find a detailed description of how to program macros, together with a large number of examples, in the files DOKU.DOC (for WORD) and DOKU.TXT (DOS) on the EA DISK240*) floppy disk.

## WRITEPROTECTIONFOR PROGRAMMED MACROS

You can use DIP switch 6 to prevent the programmed macros, images and fonts from being inadvertently overwritten (see page 4).
*) Also on the Internet: http://www.lcd-module.de/deu/disk/disk240.zip

## ELECTRONIC ASSEMBLY

## INTEGRATEDFONTS

5 character sets are integrated in each graphics unit as standard. Each character set can be used at its normal height or at up to 8 times this height. Independently of the height, the width can also be increased two to eight times.

Font 1: $4 x 6$

| $\text { Upper }+ \text { Lower }$ | $\begin{aligned} & \$ 0 \\ & (0) \end{aligned}$ | $\begin{aligned} & \hline \$ 1 \\ & (1) \end{aligned}$ | $\begin{aligned} & \$ 2 \\ & (2) \end{aligned}$ | $\begin{aligned} & \$ 3 \\ & (3) \end{aligned}$ | $\begin{aligned} & \$ 4 \\ & (4) \end{aligned}$ | $\begin{aligned} & \$ 5 \\ & \text { (5) } \end{aligned}$ | $\begin{aligned} & \$ 6 \\ & \text { \$6) } \end{aligned}$ | $\$ 7$ <br> (7) | $\begin{array}{\|l\|} \hline \$ 8 \\ (8) \end{array}$ | $\begin{aligned} & \$ 9 \\ & \text { (9) } \end{aligned}$ | $\begin{gathered} \$ A \\ \hline(10) \end{gathered}$ |  | $\begin{aligned} & \$ \mathrm{C} \\ & (12) \end{aligned}$ |  |  | $\begin{aligned} & \$ F \\ & (15) \end{aligned}$ |

| 3 | $3,6 \mathrm{~mm}$ | $10 \times 26$ | $6 \times 8$ | $32-158$ | Normal |
| 4 | $3,6 \mathrm{~mm}$ | $10 \times 20$ | $8 \times 8$ | $32-158$ | Bold |
| 5 | $7,2 \mathrm{~mm}$ | $5 \times 20$ | $8 \times 16$ | $32-158$ | Big |

Each character can be positioned with pixel accuracy. Text and graphics can be combined as required. Several different font sizes can also be displayed together.

Font 3: $6 \times 8$

Each text can be output left justified, right justified or centered. $90^{\circ}$ rotation (for vertical installation of the display) is also possible. Macro programming permits the inclusion of up to 11 additional fonts and the complete redesign of the individual characters. A font editor on the EA DISKFONT1520 floppy disk allows you to create and program in any font you like with a size of up to $16 \times 16$ pixels.

Font 5: $8 \times 16$

## TIP: FONTEFFECTS

With large fonts, you can use the command ESC L TEXT mode (link, pattern) to produce interesting effects through overlaying (writing and offsetting a word several times).

## TEST <br> Original font $8 \times 16$ with ZOOM 3

## ELECTRONIC ASSEMBLY

## ALLCOMMANDS AT A GLANCE

After power-on cursor flashes at the top left of display. It is ready for some commands. All received characters will be displayed as ASCII codes (see page 7: Font 1 ..Font 5 ). Exceptions are: CR, LF, FF, ESC. Line Feed is done by code 'LF'. After sreen is full, cursor will jump to top left corner again. Code 'FF' (Formfeed) will clear display.
All other commands (place cursor, set font, graphic functions, ...) will be startet by ESCAPE-code (27dec. / \$1B hex).

## ELECTRONIC ASSEMBLY

## EA KIT129-6

## PARAMETERS

The graphics kit can be programmed by means of various integrated commands. Each command begins with ESC followed by one or two command letters and then parameters. All the commands and their parameters, such as coordinates and other transfer values, are always expected as bytes. No separating characters, such spaces or commas, must be used between them. The commands require no final byte such as a carriage return (except for the string \$00).

## PROGRAMMINGEXAMPLE

The following table shows an example in which the string "Test" is output left justified at coordinate 7,3.

| Example | Codes to be output |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| In ASCII | ESC | Z | L | BEL | ETX | T | e | S | t | NUL |
| In hex | \$1B | \$5A | \$4C | \$07 | \$03 | \$54 | \$65 | \$73 | \$74 | \$00 |
| In decimal | 27 | 90 | 76 | 7 | 3 | 84 | 101 | 115 | 116 | 0 |
| For Turbo Pascal | write(aux, chr(27), 'Z', 'L', chr(7), chr(3), 'Test', chr(0)); |  |  |  |  |  |  |  |  |  |
| For C | fprintf(stdaux, "\x1BZL\%c\%c\%s\x00", 7, 3, "Test"); |  |  |  |  |  |  |  |  |  |
| For Q Basic | OPEN "COM1:9600,N,8,1,BIN" FOR RANDOM AS \#1 <br> PRINT \#1,CHR\$(27)+"ZL"+CHR\$(7)+CHR\$(3)+"Test"+CHR\$(0) |  |  |  |  |  |  |  |  |  |

## PATTERN

A pattern type (mst = 0..7) can be set as a parameter with some commands. In this way, rectangular areas, bar graphs and even texts can be linked to different patterns and displayed.

The following fill patterns are available:
pat=0 pat=1 pat=2 pat=3 pat=4 pat=5 pat=6 pat=7

White

Black

$25 \%$ gray

50\% gray

$75 \%$ gray

$45^{\circ}$ right

$45^{\circ}$ left

$45^{\circ}$ cross

## ELECTRONC ASSEMBLY

## DESCRIPTIONS OFTHEVARIOUS GRAPHICS FUNCTIONS

On the following pages you will find detailed descriptions of all of the functions in alphabetical order. In each case, an enlarged section of the image, $50 \times 32$ pixels in size, is shown as a hard copy example, indicating the contents of the display after the command is executed. The bytes to be transferred are shown as hex values in the examples.

## ESC B L/R/O/U no x1 y1 x2 y2 sv ev pat Define bar graph

Up to 2 bar graphs (no=1..2) can be defined. These can extend to the left (L), right (R), up ( $\mathbf{O}$ ) or down (U). At its full extent, the bar graph occupies an area from $\mathbf{x 1 , y 1}$ to $\mathbf{x 2} \mathbf{y} \mathbf{y}$. It is scaled with the start value (no extension) $\mathbf{s v}(=0 . .254)$ and the end value (full extension) ev (=0..254). The bar graph is always drawn in inverse mode with the pattern (pat): The background is thus always retained. (Note: When this command is executed, it defines the bar graph but does not display it).
Example: $\quad \$ 1 \mathrm{~B} \quad \$ 42 \mathrm{\$ 4F} \quad \$ 01 \quad \$ 04 \quad \$ 02 \quad \$ 09 \quad \$ 1 \mathrm{E} \quad \$ 04 \quad \$ 14 \quad \$ 01$

Bar graph no. 1, which extends upwards, is defined. When it is fully extended, it takes up an area from 4,2 to 9,30 . The start and end values correspond to a $4 . .20 \mathrm{~mA}$ display. (The diagram shows the bar graph fully extended, as represented with $\$ 42$ \$01 \$14.)

## ESC B no value

The bar graph with the number n1 (1..2) is set to the new value ( $\mathrm{sv}<=$ value $<=\mathrm{ev}$ ). If value $>\mathrm{ev}$, the end value (ev) is displayed. The bar graph must be defined first (see above).
Example: \$1B \$42 \$01 \$0A
Bar graph no. 1 defined in the above example is set to a value of 10 .

## ESC D L/I/S

Change contents of display
The entire contents of the display are deleted ( $\mathbf{L}$ - white), inverted (I) or filled ( $\mathbf{S}$ - black).
Example: \$1B \$44 \$49
Inverts the entire contents of the display.

## ESC D A/E

Switch display on/off
Switches the contents of the display off ( $\mathbf{A}$ - not visible) or on ( $\mathbf{E}$ - visible). Outputs are still possible when it is switched off.
Example: \$1B \$44 \$41
The contents of the display are no longer visible after this command.
Note: This does not mean that power supply current is reduced.

## EA KIT129-6

## ESC F n1 n2 n3

## ELECTRONIC ASSEMBLY

Sets the font with the number $\mathbf{n 1}$ ( $1=4 \times 6$ uppercase letters only !). In addition, an enlargement factor ( $1 . .8$ times) is set for the width ( n 2 ) and height ( n 3 ) separately. Example: $\quad \$ 1 \mathrm{~B} \quad \$ 46 \quad \$ 02 \quad \$ 03 \quad \$ 04$

The $6 x 8$ with 3 times the width and 4 times the height is set with immediate effect. In the adjacent figure, the character ' $E$ ' is shown in the $6 x 8$ font and with various enlargement factors.

## ESC F T n1

Set terminal font
Sets the font with the number $\mathbf{n 1}$ for terminal operation. The font for the terminal is always used without zoom and in REPLACE mode.
Example: \$1B \$46 \$54 \$03
The $6 \times 8$ font is set as the terminal font with immediate effect.
ESC G x1 y1 x2 y2
Draw straight line
A straight line is drawn from $\mathbf{x 1}, \mathbf{y} 1$ to $\mathbf{x 2 , y 2}$ taking into account the graphics mode set 'V' (set/delete/inverse).
Example: \$1B \$47 \$03 \$14 \$28 \$06
A straight line is drawn from 3,20 to 50,6 .

ESC H x1 y1 x2 y2 Create hard copy of display contents
Requests the area from the upper left corner ( $\mathbf{x 1}, \mathbf{y} 1$ ) to the lower right corner ( $\mathbf{x} 2, \mathbf{y 2}$ ). The graphics chip then immediately sends the width and height of the image section followed by the image data. See the upload image command ('U') for the structure of the image data.
Example: $\quad \$ 1 B \quad \$ 48$ \$00 \$00 \$1F \$0F
The upper left part of the screen ( $32 \times 16$ pixels) is sent via RS-232.

## ESC J n1

Switch beep on/off manually
Switches the tone off $(\mathbf{n} 1=0)$, on for an undefined period ( $\mathbf{n} \mathbf{1}=1$ ) or on for $n 1 / 10$ seconds $(\mathbf{n} 1=2 . .255)$.
Example: \$1B \$4A \$0A
The tone sounds for 1 second after this command.

## ESC K A add

Assign address
Assigns an address to the EA KIT129 (add=0..254). The best place for this command is in the power-on macro.
Example: \$1B \$4B \$41 \$01
The EA KIT129 is assigned the address $\$ 01$ with immediate effect.

## ESC K S/Dadd

Selects (S) or deselects (D) the EA KIT129 with the address add (0..254); the address 255=\$FF is a master address for all EA KIT129 units.
Example: \$1B \$4B \$44 \$01
All commands for the EA KIT129 with the address $\$ 01$ are ignored with immediate effect.

## ELECTRONIC ASSEMBLY

## ESC L n1 pat

Sets the link mode ( n 1 ) and pattern (pat) for the string output text function (ESC Z).

## Example: $\$ 1 \mathrm{~B}$ \$4C \$03 \$03

Sets the link mode for all subsequent text functions to gray characters (pattern $3=50 \%$ gray) inverted with the background.
Link mode n1:
1 = set: black pixels irrespective of the previous value (OR)
2 = delete: white pixels irrespective of the previous value
3 = inverse: changes black pixels to white pixels and vice versa (EXOR)
4 = replace: deletes the background and sets black pixels
5 = inverse replace: fills the background and sets white pixels

Set text mode
LOEGHEI

Thum:

Thu FEFLME

Call macro

ESC M P n1
Calls the port macro with the number $\mathbf{n 1}$ ( $0 . .255$ ).
Example: \$1B \$4D \$50 \$01
The (normal) macro with the number 1 is executed.

## ESC M A/Jn1 n2 n3

Calls the normal macros with the numbers $\mathbf{n 1}$ to $\mathbf{n 2}$ automatically every $\mathbf{n 3} / 10$ seconds. $\mathbf{A}=$ cyclical call (e.g. 1,2,3,4,1,2,3,4, etc.); J=ping-pong call (e.g. 1,2,3,4,3,2,1,2,3,4, etc.).
Automatic execution is terminated:

- When a character is received from the RS-232 interface
- When a touch automatically executes a touch macro
- When an input change executes a port macro

Example: \$1B \$4D \$41 \$01 \$03 \$05
The macros with the numbers 1,2 and 3 are executed automatically with a break of $1 / 2$ second.

## ESC O n1 n2

Sets the cursor to column $\mathbf{n 1}$ and row $\mathbf{n 2}$ for terminal operation. The origin in the upper left corner is $\mathbf{1 , 1}$.
Example: $\$ 1 \mathrm{~B} \quad \$ 4 \mathrm{~F}$ \$03 \$05
Sets the cursor to the 3rd column in row 5 .

## ESC $\quad \mathrm{P} \quad \mathrm{x} 1 \mathrm{y} 1$

Set dot
Sets a pixel at $\mathbf{x 1}, \mathbf{y} 1$ taking into account the graphics set mode 'ESC V' (set/delete/ invert).
Example: $\quad \$ 50 \quad \$ 11$ \$0D
Sets the pixel at 17,13.

## ESC Q C n1

n1=1: Switches the cursor on; it flashes at the current position on the terminal.
$\mathrm{n} 1=0$ : Switches the cursor off.
Example: $\$ 1 \mathrm{~B} \quad \$ 51 \quad \$ 43 \quad \$ 01$
Switches the cursor off.

## ESC $\quad$ Q D $\quad$ x1 $\quad$ y1 $\quad$ x2 $\quad$ y2

Defines the area from the upper left corner ( $\mathbf{x} 1, \mathbf{y} \mathbf{1}$ ) to the lower right corner ( $\mathbf{x} \mathbf{2}, \mathbf{y} \mathbf{2}$ ) as an automatically flashing area. The flashing function is started at the same time. This deactivates the terminal cursor.
Example: $\$ 1 \mathrm{~B} \quad \$ 51 \quad \$ 44 \quad \$ 00 \quad \$ 0 \mathrm{~F} \quad \$ 07 \quad \$ 10$
Defines the flashing area from 0,15 to 7,16 .

## ESC Q Z n1

Sets the flashing time to $\mathbf{n} \mathbf{1}(=1 . .15)$ tenths of a second. When $\mathbf{n} \mathbf{1}=0$, the flashing function is deactivated and the original screen restored.
Example: \$1B \$51 \$5A \$03
Sets the flashing time to 0.3 seconds.

## ESC $\quad \mathrm{R} \quad \mathrm{R} \quad \mathrm{x} 1 \quad \mathrm{y} 1 \quad \mathbf{x} 2 \quad \mathrm{y} 2$

Draw rectangle
Draws a rectangle from the upper left corner ( $\mathbf{x} \mathbf{1}, \mathbf{y} \mathbf{1}$ ) to the lower right corner ( $\mathbf{x} \mathbf{2}, \mathbf{y} \mathbf{2}$ ) taking into account the set graphics mode 'V' (set/delete/inverse). The contents of the rectangle are not changed. See 'ESC R O' (Draw box).
Example: $\$ 1 \mathrm{~B} \quad \$ 52 \quad \$ 52 \quad \$ 15 \quad \$ 08 \quad \$ 30 \quad \$ 25$
Draws a rectangle from 21,8 to 48,37 .

## ESC $\quad \mathrm{R} \quad \mathrm{N} \quad \mathrm{x} 1 \quad \mathrm{y} 1 \quad \mathrm{x} 2 \mathrm{y} 2$

Draw rounded rectangle
Draws a rectangle with rounded corners from the upper left corner ( $\mathbf{x} 1, \mathbf{y} \mathbf{1})$ to the lower right corner ( $\mathbf{x} 2, \mathbf{y} \mathbf{2}$ ) taking into account the set graphics mode 'V' (set/delete/inverse). The contents of the rounded rectangle are not changed. See 'ESC R J' (Draw rounded box).
Example: $\$ 1 \mathrm{~B} \quad \$ 52$ \$4E \$06 \$02 \$26 \$13
Draws a rounded rectangle from 6,2 to 38,19 .

## ELECTBONC ASSEMBLY

## ESC R L x1 y1 x2 y2

Deletes the area from the upper left corner ( $\mathbf{x} 1, \mathbf{y} \mathbf{1}$ ) to the lower right corner ( $\mathbf{x} \mathbf{2}, \mathbf{y} \mathbf{2}$ ).
Example: $\$ 1 \mathrm{~B} \quad \$ 44 \quad \$ 53 \quad \$ 1 \mathrm{~B} \quad \$ 52 \quad \$ 4 \mathrm{C} \quad \$ 06$ \$04 $\quad \$ 28 \quad \$ 19$
The display is filled with ESC D S and then deleted from 6,4 to 40,25.

## ESC R I x1 y1 x2 y2

Inverts the area from the upper left corner ( $\mathbf{x} 1, \mathbf{y} \mathbf{1}$ ) to the lower right corner ( $\mathbf{x} \mathbf{2}, \mathbf{y} \mathbf{2}$ ) (black pixels turn white and vice versa).
Example: \$1B \$52 \$49 \$00 \$00 \$17 \$1B
Inverts the area from 0,0 to 23,27 with the display contents from the "Set font" example.

Invert area

Fill area

Fill area with pattern
Fills a rectangular area from the upper left corner ( $\mathbf{x 1}, \mathbf{y} 1$ ) to the lower right corner ( $\mathbf{x} 2, \mathbf{y} 2$ ) with the pattern pat taking into account the set graphics mode "ESC V' (set/ delete/invert/replace/inverse replace).
Example: \$1B \$52 \$4D \$05 \$01 \$2D \$1A \$07
Fills the area with the pattern $7=45^{\circ}$ cross from 5,1 to 45,26 .

## ESC R O x1 y1 x2 y2 pat

Draw box
Draws a rectangle from the upper left corner ( $\mathbf{x} \mathbf{1}, \mathbf{y} \mathbf{1}$ ) to the lower right corner ( $\mathbf{x} \mathbf{2}, \mathbf{y} \mathbf{2}$ ) with the pattern pat. The background of the box is deleted. See 'ESC R R' (Draw rectangle).
Example: $\$ 1 \mathrm{~B} \quad \$ 52$ \$4F \$02 \$05 \$12 \$1E \$02
Draws a box from 2,5 to 18,30 with the pattern $2=25 \%$ gray.

## ESC R J x1 y1 x2 y2 pat

Draw rounded box
Draws a rectangle with rounded corners from the upper left corner ( $\mathbf{x} \mathbf{1}, \mathbf{y} \mathbf{1}$ ) to the lower right corner ( $\mathbf{x} \mathbf{2}, \mathbf{y} \mathbf{2}$ ) with the pattern pat. The background is deleted. See 'ESC R N' (Draw rounded rectangle).
Example: $\$ 1 \mathrm{~B} \quad \$ 52$ \$4A $\$ 07$ \$03 $\$ 23 \quad \$ 16 \quad \$ 03$
Draws a rounded box from 7,3 to 35,22 with the pattern $3=50 \%$ gray.

ESC S num data...
Outputs the next num ( $1 . .255,0=256$ ) bytes at the serial interface.
Example: \$1B \$53 \$04 \$54 \$45 \$53 \$54
Transmits the word 'TEST' via the RS-232C interface.

## ESC T H/Vf1 f2 ret frm text... NUL

Defines a touch key and labels it with the current font. $\mathbf{H}=$ horizontal or $\mathbf{V}=$ vertical labeling (rotated $90^{\circ}$ ). Several touch fields can be grouped together to form a single touch key ( $\mathbf{f} 1=$ upper left touch field; $\mathbf{f 2}=$ lower right touch field of the new touch key). This touch key is assigned a return code with ret (1..255). When the touch key is touched, the touch macro with the number ret is called or, if no touch macro is defined, this return code is sent via the RS232. You use frm to define the format of the touch key (frm=0: don't draw anything; frm=1: delete touch key; frm=2: delete touch key and draw with frame). text...=string with the label (which is always centered on the touch key). The label can also have more than one line; in this case, the lines are separated by the pipe-character '|' (=\$7C). The string must be concluded with $\mathrm{NUL}=\$ 00$. See example on page 3.
Example 1: Horizontal touch key:
\$1B \$54 \$48 \$01 \$01 \$41 \$02 \$54 \$45 \$53 \$54 \$00
Defines a horizontal touch key (field no. 1 only) with the return code 65='A'. The touch key is drawn with a frame and labeled with the word 'TEST'.
Example 2: Vertical touch key:
\$1B \$54 \$56 \$02 \$02 \$42 \$02 \$54 \$45 \$53 \$54 \$00
Defines a vertical touch key (touch field no. 2 only) with the return code $66==^{\prime} B$ '. The touch key is drawn with a frame and labeled with the word 'TEST'.

ention

ESC T P/R
Preset/reset touch fields
Assigns $\mathbf{P}$ (=ascending return code: 1..60) or $\mathbf{R}$ (=reset all touch fields) to all 60 touch fields. In the latter case all touch fields receive the return code 0 (i.e. they are deactivated).
Example: \$1B
\$54 \$52
All touch fields are deactivated by this command and no longer recognized.

## ESC T I/S n1

Touch key response
These commands set the automatic response of the touch panel to touching. Both responses can be activated simultaneously.
$\mathrm{I}=$ automatic inversion when the touch key is touched ( $\mathbf{n} 1=0$ : off or $\mathbf{n 1}=1$ : on)
$\mathbf{S}=$ automatic signal tone when the touch key is touched ( $\mathbf{n} 1=0$ : off or $\mathbf{n} 1=1$ : on)
Example: \$1B \$54 \$49 \$01
After this command the tone sounds when a touch key is touched.
ESC T M ret
This command manually inverts the touch key with the return code ret.
Example: \$1B \$54 \$4D \$41
Inverts the touch key from the above example with the return code $65=$ ' $^{\prime}$ '.
Invert touch key manually

(Touch) key query on/off
ESC T A n1
This command sets the (touch) key query:
$\mathbf{n 1}=0$ : Switches the key query off - no touch macros or manual key query possible.
$\mathbf{n 1}=1$ : Activates the key query - keystrokes trigger touch macros or are sent via RS232.
$\mathbf{n 1}=2$ : Activates the key query - keystrokes trigger touch macros; must be queried manually.
Example: \$1B \$54 \$41 \$02
Activates the (touch) key query. The keystrokes are not sent automatically via RS232; they have to be requested manually by means of the command ESC T W.

## ESC T W

Query touch key manually
Sends the return code of the currently depressed touch key at the RS232.
Example: \$1B \$54 \$57

## ELECTRONIC ASSEMBLY

## ESC U E x1 y1 n1

Load image from EEPROM
Displays the image saved in the EEPROM with the number $\mathbf{n 1}(0 . .255)$ at position $\mathbf{x 1}, \mathbf{y} 1$.
Example: \$1B \$55 \$45 \$02 \$03 \$0E
Displays image number 14 from the EEPROM at position 2,3.

## ESC U L x1 y1 data...

Upload image
Displays an image at position $\mathbf{x 1 , y 1}$.
data..:

- 1 byte for the image width in pixels
- 1 byte for the image height in pixels
- Image data: number $=(($ height +7$) / 8)$ * width bytes

1 byte stands for 8 horizontal pixels on the screen; $0=$ white, $1=$ black; LSB: top, MSB: bottom; the image is stored from left to right.
The BMP2BLV.EXE program on the EA DISK240 floppy disk available as an accessory creates the image data, including the width and height, from monochrome Windows bitmap graphics (*.BMP).
Example:
\$1B \$55 \$4C \$09 \$04 \$0C \$0C
\$F0 \$FC \$FE \$FE \$F7 \$BF \$BF \$F7 \$FE \$FE \$FC \$F0 \$00 \$03 \$07 \$06 \$0D \$0D \$0D \$0D \$06 \$07 \$03 \$00
Loads the adjacent image at position 9,4 .

## ESC V n1

Sets the link mode $\mathbf{n 1}$ for the following graphics functions: ESC P (Set point), ESC G (Draw straight line), ESC W (Continue straight line), ESC R R (Draw rectangle), ESC R N (Draw rounded rectangle), ESC R M (Fill area with pattern).

## Example: \$1B <br> \$56 \$03

Sets the link mode to inverse.
By way of example, a rectangle is drawn alongside with the link modes set, delete and inverse on an existing background.

Link mode n1:

ESC W x1 y1
Continue straight line
Continues a straight line from the last end or point drawn to $\mathbf{x 1}, \mathbf{y} 1$ taking into account the set graphics mode 'V'.
Example:

| \$1B | $\$ 47$ | $\$ 00$ | $\$ 00$ | $\$ 10$ | $\$ 04$ |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\$ 1 B$ | $\$ 57$ | $\$ 16$ | $\$ 1 B$ |  |  |
| \$1B | $\$ 57$ | $\$ 30$ | $\$ 0 F$ |  |  |

A straight line is drawn from 0,0 to 16,4 . It is then continued to 22,27 and to 48,15 .

## ESC X n1

This command suspends the EA KIT129 for $\mathrm{n} 1 / 10$ seconds.
Example: \$1B \$58 \$0A
After this command the EA KIT129 waits for a second before the next command is processed.

## ESC $\quad$ Y M n1

## Define as an output

$\mathrm{n} 1=$ count of I/O lines will be defined as an output (starting at I/O8 downwards). If $\mathbf{n 1} 1=0$, all lines I/O1~I/O8 are switched as input lines (=default after power-on and after reset); see also application page 5.
Example: \$1B \$59 \$4D \$03
sets I/O lines 6, 7 and 8 as output. I/O lines $1,2,3,4,5$ stay as input lines.

## ESC $\quad \mathrm{Y} \quad \mathrm{R} \quad \mathrm{n} 1$

Read input port
Reads in the input port ( $\mathrm{n} 1=1 . .8=\mathrm{I} / \mathrm{O} 1 \ldots \mathrm{I} / \mathrm{O} 8$ ). When $\mathrm{n} 1=0$, all the inputs are read in as 8 -bit binary values (MSB:I/O8 ... I/O1:LSB); see application on page 5. Important: External optocoupler device usually invert the input logic (input open: 1). The command "ESC Y I 1" puts this right (input open: 0).
Example: \$1B \$59 \$52 \$03
Reads in port I/O3. The result is sent via RS232.

## ESC Y W n1 n2

Changes the output port ( $\mathbf{n} 1=1 . .8=\mathrm{I} / \mathrm{O} 1 . . \mathrm{I} / \mathrm{O} 8$ ) to the value $\mathbf{n} 2$ ( $0=$ low level; $1=$ high level; $2=$ invert port). When $\mathrm{n} 1=0$, all the outputs are output as a binary value n 2 (MSB:I/O8 ... I/O1:LSB); see application on page 5.
Example: \$1B \$59 \$57 \$02 \$01
Switches the output port I/O2 to high level.

## ESC Y A n1 <br> Automatic port query on/off

Each change at the input port (8-bit binary value I/O8 ... I/O1) can call a port macro (0..255). This command activates $(\mathrm{n} 1=1)$ or deactivates $(\mathrm{n} 1=0)$ the automatic port query. After power-on, the current port status is read and the associated port macro executed immediately.
Example: \$1B \$59 \$41 \$01
Activates the automatic port query and executes the associated port macro.

## ESC Y I n1

This command allows the logic of the input port to be inverted ( $\mathrm{n} 1=0$ for normal orn1=1 for inverse). This is useful with the external optocoupler devices, for example.
Example: \$1B \$59 \$49 \$01
Inverts the input port logic.
ESC $\quad$ L n1
Switch LED-Backlight on/off
$\mathrm{n} 1=0$ will switch off LED backlight, $\mathrm{n} 1=1$ will switch on backlight; $\mathrm{n} 1=2$ inverts: ON->OFF or OFF->ON;
$\mathrm{n} 1=3 . .255$ LED backlight switched on for the time of $n 1 / 10$ seconds.
Example:
\$1B \$4A \$64
will switch on backlight for 10 seconds.
Note: In blue version EA KIT129-LW(TP) backlight will be driven with 7 mA even in "backlight-off" state. This is necessary to keep a minimum of contrast. If required, these stand-by backlight can be switched to real zero when resistor R $_{\text {off }}(240 \Omega$, SMD type) is removed.
Black\&white-version EA KIT129J-LW(TP) do not have this LED stand-by current.

## ELECTRONIC ASSEMBLY

## ESC Z L/Z/R x1 y1 text... NUL

Writes the string text... left justified (L), centered (Z) or right justified (R) at position x1 taking into account the set text mode (ESC L). Multi-line text can also be output, with the lines separated by the character '|' (=\$7C). The string must be concluded with NUL= \$00. Position $\mathbf{y} 1$ is the upper edge of the 1 st line.

Example 1: Writes the text "Left|Ok" left justified at 0,0. \$1B \$5A \$4C \$00 \$00 \$4C \$65 \$66 \$74 \$7C \$4F \$6B \$00

Example 2: Writes the text "Center|Ok" centered at 25,0. \$1B $\$ 5 \mathrm{~A} \$ 5 \mathrm{~A} \$ 19$ \$00 $\$ 43$ \$65 \$6E $\$ 74$ \$65 \$72 \$7C $\$ 4 \mathrm{~F}$ \$6B $\$ 00$

Example 3: Writes the text "Right|Ok" right justified at 49,0. \$1B \$5A \$52 \$31 \$00 \$52 \$69 \$67 \$68 \$74 \$7C \$4F \$6B \$00

## ESC $\quad \mathrm{Z} \quad$ O/M/U x1 y1 text... NUL

Writes the string text... rotated by $90^{\circ}$ degrees top justified ( $\mathbf{O}$ ), vertically centered (M) or bottom justified (U) at position y1 taking into account the text mode (ESC L). Multiline text can also be output, with the lines separated by the character 'I' (=\$7C). The string must be concluded with NUL= $\$ 00$. Position $\mathbf{x} 1$ is the right edge of the 1 st line.

Example 1: Writes the text "Top|Ok" top justified at 49,0.
\$1B \$5A \$4F \$31 \$00 \$54 \$6F \$70 \$7C \$4F \$6B \$00

Example 2: Writes the text "Mid|Ok" vertically centered at 49,15. \$1B \$5A \$4D \$31 \$0F \$4D \$69 \$64 \$7C \$4F \$6B \$00

Example 3: Writes the text "Bot|Ok" bottom justified at 49,31. \$1B \$5A \$55 \$31 \$1F \$42 \$6F \$74 \$7C \$4F \$6B \$00

## HINTS FOR HANDLING AND OPERATING

- The module can be destroyed electrically by mispoled or overvoltaged power supply, wrong polarity, overvoltage or static discharge on inputs or shortened outputs.
- Before disassembling the module, the power supply must be switched off. Also all inputs must not carry any current.
- Display, touch screen and cover glass are scratch- sensitive plastic materials and should not be touched with hard objects.
- Surfaces should be cleaned with soft fabric without using of chemical solvents.
- The module is designed for indoor use only. For operating in outside enviroment adequate precautions must be undertaken. Maximum operating temperature range from $-20 . .+70^{\circ} \mathrm{C}$ should be not exceeded. Please note that ambient temperature range is different because of self-heating of module. In humid atmosphere or in condensing situations the module functions may drop out. Direct sun exposure to the display should be avoided. Storage temperature range is $-30 . .+70^{\circ} \mathrm{C}$.

handling precautions!
