Description

The ED series safety limit switches conform to EN 50047 and have been developed to provide a range of options including plastic cases in various sizes, a choice of snap acting, slow break/make with 2 contact configurations and a choice of actuator heads.

The ED series offers the option of rotating the head in 90° increments before installation to allow ease of mounting.

Highly limit switches can be used in other applications other than guard doors, for example on moving machine beds, crane arms, lifts, elevators, etc.

Operation of these limit switches is achieved by the sliding action of the guard or other moving object deflecting the plunger or lever. For safety applications it is important that upon actuation, the guard or other moving objects should not pass completely over the switch and allow the plunger or lever to return to its original position.

Features

- · Conforms to EN (TUV) standards corresponding to the CE marking
- Positive opening operation of NC (Normally Closed) contacts conforming to IEC /EN 60947-5-1
- Double insulation makes ground terminal unnecessary (Bears marking)
- Wide standard operating temperature range: -25° C to 80° C
- · Full range of actuator heads and levers suitable for safety applications
- · Sealing up to IP 67
- · Wide switch variations, (Snap action and slow action basic switches)
- · International conduit sizes

Specifications

Standards	EN60947-5-1, UL508, EN50047, EN1088				
Approvals	cULus, TUV and CE marked for all applicable directives				
Positive Opening Operation	NC Contact				
Utilization Category	AC15 A600				
Min Current	5V, 5mA, DC				
Thermal Current (Ith)	10A				
Rated Insulation Voltage	600V AC				
Rated Impulse withstand Volt	2500V AC				
Insulation Resistance	100M Ω min. (DC 500V)				
Contact Resistance	25m $Ω$ max. (Initial)				
Max Switching Speed	250mm/s				
Max Switching Frequency	6000 operation per hour				
Enclosure Material	UL approved glass-filled polybutylene terephthalate				
Roller Material	Various polymers				
Enclosure Protection	IP 67				
Operating Temperature	Min -25 C (-18 F) Max 80 C (+176 F)				
Pollution Degree	3				
Protection Against Electric Shock	Class II (Double Insulation)				
Mech. Life Expectancy	1 x 10 ⁷ Cycles min				
Electrically Life Expectancy	150,000 Cycles min				
Vibration	IEC 68-2-6, 10-55Hz±1 Hz, Excursion: 0.35mm,1octave/min				
Conduit Entry	Various (see Product Selection table)				
Fixing	2 x M4				

Structure Description

Metal Lever Setting

Grooves which engage the lever every 18° are cut in the operation indicator disk to prevent the lever from slipping against the rotary shaft.

With roller lever models, the direction of the switch head can be varied to any of the four directions by loosening the roller lever switch screws at the four corners of the head.

Contact Block

Wide switch variations. Snap-action: 1NC/1NO Slow-action: 1NC/1NO, 2NC

Conduit

Wide switch variations. PG13.5 PG11 M16 M20 1/2-14NPT

The cover, with a hinge on its lower part, can be opened by removing the screw of the cover, which ensures ease of maintenance and wiring.

HIGHLY

Positive Opening Mechanism

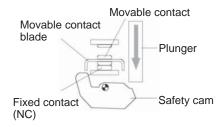

1NC/1NO Contact (Snap action)

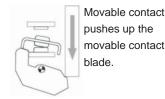

Conforms to EN60947-5-1 Positive Opening

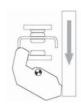

If metal deposition between mating contacts occurs on the NC contact side, they can be pulled apart by the shearing force and tensile force generated when the safety cam or plunger engages the movable contact blade. When the safety cam or plunger is moved in the direction of the black arrow the Limit Switch releases.

1. When metal deposition occurs.

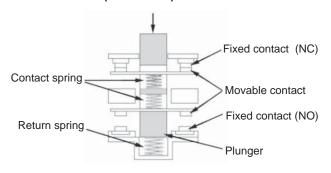

2. When contacts are being pulled apart. 3. When contacts are completely pulled apart.

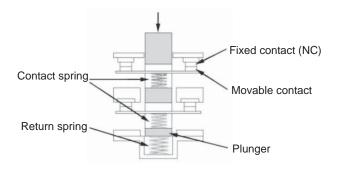

1NC/1NO Contact (Slow action)

Only the NC contacts have a positive opening function. When metal deposition occurs, the contacts are separated from each other by pushing in the plunger.

2NC Contact (Slow action)

Both NC contacts incorporate a positive opening function. When metal deposition occurs, the contacts are separated from each other by pushing in the plunger.

Operating examples

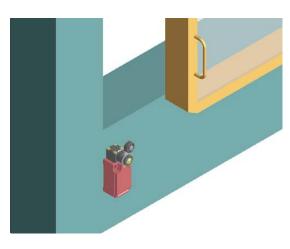

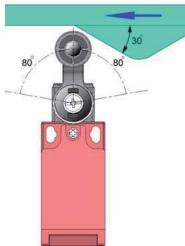

Typical Applications

The actuating cam should be profiled at 30° for optimum operation. (Plunger-type switches operate from a flat profile.)
