Product Description

The PE42750 is an SPDT UltraCMOS® Switch designed for Broadband applications such as CATV, DTV, Multi-Tuner Digital Video Recorder (DVR), Set-top Box, PCTV and Video Game Consoles. The PE42750 meets FCC 15.115 specification of 80 dB isolation at 216 MHz in both powered and unpowered states. The PE42750 covers a broad frequency range from 5 MHz to 2200 MHz with a single positive supply and CMOS control. The PE42750 provides a smaller, cost effective, more reliable and manufacturable alternative to mechanical relays in set-top box applications.

The PE42750 is manufactured using Peregrine's UltraCMOS® process, a patented variation of silicon-on-insulator (SOI) technology on a sapphire substrate, offering the performance of GaAs with the economy and integration of conventional CMOS.

2. Pins 10 and 11 can be set for single pin control
3. GND must be connected to exposed ground paddle to ensure good isolation

Moisture Sensitivity Level

The Moisture Sensitivity Level rating for the PE42750 in the 12-lead 3 x 3 x 0.75 mm QFN package is MSL1.

Switching Frequency

The PE42750 has a maximum 25 kHz switching rate.

Latch-Up Avoidance

Unlike conventional CMOS devices, UltraCMOS® devices are immune to latch-up.

Table 4. Operating Conditions @ 25°C

Parameter	Min	Typ	Max	Unit
V_{DD} Power Supply	2.7	3.0	3.63	V

Operation should be restricted to the limits in the Operating Ranges table.

Table 5. Absolute Maximum Ratings

Parameter/Condition	Min	Max	Unit
V_{DD} Power supply voltage	-0.3	4.0	V
V_I Voltage on CTRL input	-0.3	V_{DD} + 0.3	V

V_{ESD} MM ESD Voltage all pins JEDEC JESD22-A115-A		150	
V_{ESD} CDM ESD Voltage JEDEC JESD22-C101D		1000	

Exceeding absolute maximum ratings may cause permanent damage. Operation between operating range maximum and absolute maximum for extended periods may reduce reliability.

Electrostatic Discharge (ESD) Precautions

When handling this UltraCMOS® device, observe the same precautions that you would use with other ESD-sensitive devices. Although this device contains circuitry to protect it from damage due to ESD, precautions should be taken to avoid exceeding the rating specified.

Typical Applications

The PE42750 provides the high isolation required by FCC part 15.115 regulation between the television antenna and the cable plant. The advantage of the PE42750 is that device isolation performance is maintained when power is removed. When the PE42750 is unpowered all ports are terminated.

Evaluation Kit Information

The SPDT Switch Evaluation Kit facilitates customer evaluation of the PE42750 SPDT switch. The RF common port is connected through a 75 Ω transmission line to J2. Ports 1 and 2 are connected through 75 Ω transmission lines to J1 and J3. A through line connects F connectors J4 and J5. This transmission line can be used to estimate the PCB loss over the environmental conditions. J6 provides DC and digital inputs to the device.

The board is composed of a two metal layer FR4 material with a total thickness of 0.032". The transmission lines are hybrid microstrip/coplanar waveguide with ground plane (28 mil core, 12 mil width, 12 mil gap).

The provided jumpers short the control pins to ground for logic low. With the jumper removed the control input rises to V_{DD} for logic high through the 1 MΩ pull up resistor. These resistors will draw several microamps from $V_{DD.}$ They are not required for normal operation.
