## 3 - INPUT VIDEO SWITCH

## ■ GENERAL DESCRIPTION

The NJM2249 is 3-input video switch for video and audio signal. One input terminals has sink-chip clamp function and so it is applied to fixed DC level of video signal. Two other input terminals are transistor base input for luminant signal and so luminant level may be easily fixed by outer circuit. Its operating supply voltage range is 4.75 to 13 V and bandwidth is 10 MHz . Cross-talk is 70 dB (at 4.43 MHz ).

## - APPLICATION

This IC requires $1 \mathrm{M} \Omega$ resistance between INPUT and GND pin for clamp type input since the minute current causes an unstable pin voltage.

This IC requires 0.1 uF capacitor between INPUT and GND, $1 \mathrm{M} \Omega$ resistance between INPUT and GND for clamp type input at mute mode.
