- Microcontroller Application IC
- Audio Application IC
- Cloud & Computing IC
- Foundry Service

Designed by star advertising +86-431127072

Nuvoton Technology Corp. was established as a spin-off of Winbond Electronics' Logic business group, starting operation in July, 2008 and IPO in September, 2010. Nuvoton Technology focuses on the R&D and sales in logic ICs, and leads in market shares of Audio, Microcontrollers, computer and cloud related application ICs. Nuvoton owns a six-inch wafer fab, featuring in special niche process. Besides in-house IC products, the wafer fab also provides part of its capacity for foundry services. Nuvoton Technology provides high cost performance products for its customers by means of flexible technology innovation capabilities, full product solutions and excellent integration of technology synergy. Nuvoton offers superior services based on existing solid foundation and continues to realize its vision: "Be an indispensable partner to industry leaders." Nuvoton values the long-term relationship with its partners and customers; the company has established subsidiaries in the USA, China and Israel to strengthen regional customer support and global management. For more information, please visit www.nuvoton.com.

M051 Series

The NuMicro™ M051 series embedded with the ARM® Cortex™-M0 core runs up to 50 MHz with 8K/16K/32K/64K bytes Flash program memory, 4K bytes, and 4K bytes Flash loader memory for In System Programming (ISP). The M051 series also comes equipped with a variety of peripherals, such as GPIOs, Timers, UART, SPI, I²C, PWM, ADC, Comparator, Watchdog Timer and Low Voltage Reset, and Brown-out Detector.

Key Features: Operable at 2.5V to 5.5V and -40°C to +85°C with separate Program Flash (8 KB ~ 64 KB), Data Flash (4 KB) and ISP loader (4 KB)

Potential Applications: Industrial Control, Security System, Communication System, Motor Control, etc.

Mini51 Series

The NuMicro™ Mini51 series embedded with the ARM® Cortex™-M0 core runs up to 24 MHz with 4K/8K/16K bytes Flash program memory, 2 Kbytes SRAM and 2 Kbytes Flash loader memory for In System Programming (ISP). The Mini51 series also comes equipped with a variety of peripherals, such as GPIOs, Timers, UART, SPI, I²C, PWM, ADC, Comparator, Watchdog Timer and Low Voltage Reset.

Key Features: Operable at 2.5V to 5.5V and -40°C to +85°C with separate Program Flash (4 KB ~ 16 KB) and ISP loader (2 KB).

Potential Applications: Auto-control System, Data Communication, Industrial Control, etc.

Microcontroller Application IC

ARM7 / ARM9 MCU

Nuvoton provides a series of network connected processors with feature rich peripherals based on ARM7TDMI and ARM926 to let customers implement their innovative products in a timely manner. A complete development environment is provided for each platform. The source code of BSP drivers under Linux/WinCE are all provided to shorten the design cycle times. The targeted applications range from devices that require network connectivity, USB connectivity, user interface devices, and industrial control, such as POS, HMI, IP camera, etc. The NUC501 is an ARM7TDMI-based MCU, specifically designed to offer low cost and high performance for various applications, such as 2.4G RF wireless applications, thermal printer, bar code reader, and home appliances.

ARM SoC

ARM Video SoC

Nowadays, TTM (Time To Market) is of great concern due to fierce competition. In order to shorten the DCT (Development Cycle Time), designers need to build up a flexible platform where cost & performance might be traded off during development period. The ARM SoC N329 family is specially designed to meet such increasing needs in terms of flexibility and ease-of-design.

By adopting the stacked MCP approach, ARM SoC is packaged in the cost-effective LQFP-128 / LQFP-64 with various SDRAM sizes. It leads to a very neat PCB layout, as the most complicated traces @ SDRAM are now inside the package. The resultant design exhibits lower BOM cost, higher reliability, reduced EMI, smaller PCB, and less power consumption.

Three N329 series are developed to cope with various kinds of applications: MJPEG @ N3290x series, Multi-format decoder @ N3291x series, and H.264 codec @ N3292x series. Migration among different N329 series is easy and straightforward since S/W is compatible and MCP is maintained across series.

1. CMOS sensor: CCIR601 / CCIIR656 I/F, 2M pixel.

2. OVG: Kronos OpenVG 1.1-compliant IP.

3. JPEG: Motion JPEG Codec, VGA 30fps.

4. MF: Multi-Format Decoder, H.264 BP / MPEG4 SP / H.263 P3 @ SVGA 30fps, Sorenson Spark @ D1 30fps.

5. Resolution: QVGA (320x240), VGA (640x480), SVGA (800x600), XGA (1024 x 768).

6. Status: MP - Mass Production, ES - Engineering Sample, CS - Customer Sample, UD - Under Development & may be subject to change without notice.

7. Only one hardware SPI controller to support two SPI device with two chip selection signals.

8. XGA is for still image only. For video, N3290x is MJPEG VGA@30fps and N3291x is 800x600@30fps.

9. N3290x and N3291x have only one hardware host controller and N3292x has two hardware host controllers.

10. Under Development Product may be changed without notice. Please check the final specification with contact window.

Adobe FlashLite Platform

Optimized for Adobe FL3.1 & FL4.0 rendering performance to get smooth playback of FlashLite contents. With unique MCP (Multi-Chip Package) technology to stack DDR / DDR2 inside the cost-effective LQFP-128 package, Nuvoton's Linux-based FlashLite platforms offer customers the best cost / performance for leveraging the eco-system built around Adobe Flash.

FS-LCD Driver IC Family

This series of driver IC is designed for FS-LCD panel use. FS stands for Field Sequential. FS-LCD uses the same panel process as TN that the panel works with RGB LED switching effect to produce a colorful display. FS-LCD driver targets at the applications which require both color display and low cost, such as games, toys, ELA, weather forecast station, etc.

Peripheral

Analog to Digital Converter

Our 8-bit A/D converters are using synchronous 3-wire serial interface with guaranteed 8-bit resolution. Each channel can be independently programmed to an analog input mode and supports A/D conversion rates up to 50KHz. Used in applications that require fewer external components.

W55ADxxx 8-ch, 8-bit A/D Converter

Part No.	A/D Channel	Convert Rate	Resolution (bit)	VDD (V)	µC Interface
W55AD808	8	50KHz	8	2.7 ~ 5.5	3 wires

I/O Expander

The W55P241 is a general purpose programmable I/O device usable with many different microprocessors through SPI interface. This contains three 8-bit ports, total 24 I/O pins which may be individually programmed for 4 separate command groups. These I/O pins can drive LED directly with high-current applications. A dedicated counter is in charge of 256-level output functions.

W55P241 I/O Expander w/ 24 I/O Pins and SPI Interface

Part No.	SPI Interface	GPIO	Wake Up	H/W PWM I/O	Internal OSC
W55P241	✓	24 I/O	✓	8 Pins	8MHz

Home Appliance

4-bit µC based IC, which is designed to cover one-battery to three-battery applications. Its stable LCD performance, ultra-low power consumption, along with the EEPROM and mask ROM as the program memory, this family is ideal for portable products such as remote controllers, gifts, toys, clocks, timers, and thermometers.

ISD Voice IC

ISD ChipCorder®

Nuvoton's ChipCorder® is a complete, single chip solution for voice and audio recording and playback. It is designed to offer the highest quality single-chip voice record/playback solutions for embedded applications. Non-volatile and highly integrated, they are ideal solutions for adding voice prompts, alerts, interactive menus, and voice memos to consumer, industrial and security products. Available pre-recording services make it easy to add voice to system design.

Telecom

Voice CODEC

Nuvoton's family of Voice CODEC solutions address the market requirements for voice-grade A/D and D/A conversion at the lowest possible power consumption. The portfolio includes both single and dual channel devices with 3V, 5V or mixed 3V/5V supply voltages options as well as a variety of analog output variations. All CODECs comply with industry standard ITU G.711 and G.712 recommendations.

Part No.	# of Channels	PCM Format	Supply Voltage	Power (TYP/STBY)	Package
W6810	1	μ-Law / A-Law	5V	25mW / 0.5μW	SOP20, SSOP20, TSSOP20
W6811	1	μ-Law / A-Law	5V Analog	25mW / 0.5μW	SOP24, SSOP24
			3V Digital		
W681310	1	μ-Law / A-Law	3V	10mW / 0.5μW	SOP20, SSOP20, TSSOP20

VoIP Audio

Powered by 20 years of voice/speech expertise in consumer applications, Nuvoton is now empowering mono audio CODEC solutions for legacy and emerging applications. Nuvoton's growing family of mono audio CODEC solutions addresses the market requirements for audio grade A/D and D/A conversions. Being the most cost effective CODEC supplier in the industry, the portfolio includes audio solutions for cutting edge low power consumption, performance, integration, size, and user friendly tools.

Part No.	Description	DAC SNR / THD (dB)	ADC SNR / THD (dB)	Sample Rate	Analog Supply (V)	Digital Supply (V)	Package (mm)
NAU8810	Mono Audio CODEC with I ² C	93/-84	90/-80	48kHz	2.5-3.6	1.71-1.95	20-QFN (4x4)
NAU8811	Mono Audio CODEC with SPI	93/-84	90/-80	48kHz	2.5-3.6	1.71-1.95	20-QFN (4x4)

Audio Enhancement

MaxxAudio Algorithms On A Chip

The NPCA110x is a family of Audio Enhancement SOCs, targeted for consumer electronics applications.

The NPCA110x chip runs "Waves Audio" (2011 Technical Grammy award Winner) professional grade algorithms, making it a single plug & play audio processor, which offers high-end audio performance.

The algorithms are designed to overcome the acoustic limitations common with modern consumer electronic device, like slim designs, small speakers and resonant enclosure.

The target device is easily tuned using the provided Audio Console GUI that controls MaxxAudio3.0®.

This enables an "in-house" audio engineer or a Nuvoton's audio engineer to quickly tune the system and customize audio pre-sets.

The NPCA110x offers the end user a rich and enjoyable audio experience, even from acoustically restricted designs.

Features

The NPCA110x is pre-programmed with MaxxAudio3.0® algorithms and system features. These include:

- MaxxBass® reproduces full, rich-sounding bass tones even from small speakers. This is done by using a patented psychoacoustic technique to create a perceived low bass, which can be extended up to 1.5 octaves lower than the original cut-off.
- Power handling is done by MaxxVolume®, which utilizes the power amplifiers and speakers to their full extent yet avoids clipping and distortions.
- Maxx3D™ widens the 3D image and provides a spacious feel, even from small devices.
- MaxxTreble™ reproduces crystal clear high frequencies to compensate for tweeter-less designs.
- MaxxDialog™ enables end users to enjoy clear, crisp dialog that is not masked by loud music or noisy effects.
- MaxxEQ™ provides a flexible equalizer with up to 20 stereophonic bands, providing ample bands for solving resonance issues as well as creating unique sound signatures.
- Digital Volume and Bass/Treble controls which can replace traditional analog potentiometers
Additional digital controls for selecting a specific music style (Jazz, Vocal, Rap, Classical, etc.)

Derivatives

- NPCA110P – Designed for Portable audio devices, such as docking stations, multimedia speaker and similar products.
- NPCA110T – Designed specifically for TV applications. The algorithms compensate for small speakers with no low-frequency reproduction capabilities and restricted dynamic range. It can downsize or completely replace internal tweeters, large amplifiers and sub-woofers.
- NPCA110D – A digital-only version for systems that can integrate it into their digital flow.
- NPCA110B – An algorithm-restricted design for cost-sensitive projects that require Volume and Bass boost, such as USB based soundbar
- NPCA110M – Designed for modern mobile devices and tablets. It is an embedded CODEC that runs all the output processing as well as microphone handling.

General Purpose I/O

General Purpose I/O

Nuvoton offers a series of easy-to-use General Purpose I/O solutions supporting the SMBus™ standard. These products provide SMBus (I²C) address setting pins to set the address during power-on-reset or from external reset and provide an interrupt to inform the system that a transition has occurred on General Purpose (GP) input pins. W83L603G/W83L604G also provides Auto LED, PC Beep functions.

Hardware Monitor

H/W Monitor for Desktop & Server

Hardware Monitoring ICs are one of Nuvoton's most popular computer IC product categories. Hardware Monitoring ICs for desktop and server applications are widely adopted in the motherboard, server, and Industrial PC applications. Hardware Monitoring solutions monitor several important hardware parameters, such as voltage, temperature, and fan speed, and then issue alarm / warning signals when sensing abnormal events to prevent the systems from any damage.

DDR Bus Termination Regulator

DDR bus termination regulator is a linear regulator for applications of a high speed bus terminator. The chip provides a stable power supply which tracks half of input power dynamically for bus termination with a single chip. The bus termination regulator is available in SOP-8, power SOP-8 & DFN10 packages. With DDR bus termination regulator design, a high integration, high performance, and a cost-effective solution are promoted.

Part No.	Load Regulation	Output Current Max	Vin	Control Voltage	Function	Package	Status*
W83310G-R2	-20mV~+20mV	2A	1.4V-3.6V	3V - 3.3V	OCP	SOP 8	NRFND
W83310DG	-20mV~+20mV	2A	1.4V-3.6V	3V - 3.3V	OCP	Power SOP 8	NRFND
W83312SN	-20mV~+20mV	Peak 3A	1.2V-5.5V	3V - 5.5V	OCP, OTP	Power SOP 8	P
NCT3101S	-20mV~+20mV	Peak 2.5A	1.0V-5.5V	3V - 5.5V	OCP, OTP	Power SOP 8	P
NCT3107S	-20mV~+20mV	VTT: 1.5A; VREF: 10mA	1.5V-5.0V	2.2V-5.5V	OCP, OTP, EN	Power SOP 8	P
NCT3105Y	-20mV~+20mV	VTT: 2A; VREF: 10mA	VLDOIN: 1.0V-3.6V; VREFIN: 0.5V-1.8V	2.3V-5.5V	OCP, OTP, EN, PG	DFN10	P

*Status: P= Mass Production, S= Samples, NRFND= Not Recommended for New Design

Power Switch

The W83L351YG is the power interface switch ICs for single slot ExpressCard and provide all power management functions required by ExpressCard. The W83L351YG distributes 3.3V, 3.3Vaux, and 1.5V to the ExpressCard socket. Each voltage line is protected with a built-in current limit circuit and a thermal shutdown circuit.

The NCT3521 series are high-side current-limited switches with soft-start and output shutdown discharge functions, optimized for general purpose power distribution and LCD/LVDS power ON/OFF requiring circuits timing control and protections.

Part No.	Input Voltage(V)	Rds-on(mOhm)	Output Current	UVLO	Protection	Package	Status*
W83L351YG	AUX 3.0 to 3.6	100	400mA	Y	OCP, OTP	QFN 20	P
	3.3V 3.0 to 3.6	50	1.7A				
	1.5V 1.35 to 1.65	70	1.1A				
NCT3521U NCT3521U-2	2.7V to 5.5V	80 (typ.)	2.0A	Y	OCP, RVP, OTP	SOT23-5 SOT23-6	P

*Status: P= Mass Production, S= Samples, NRFND= Not Recommended for New Design

Cloud & Computing IC

Linear Regulator

Nuvoton NCT3720 / NCT3730 is a high performance linear regulator designed for use in applications requiring very low input voltage and very low dropout voltage. It operates with a VIN as low as 1.0V and control voltage 3V with output voltage programmable as low as 0.8V. The significant feature includes ultralow dropout, ideal for applications where VOUT is very close to VIN. Additionally, there is an enable pin to further reduce power dissipation while shutdown and power good indicator. The NCT3720S/S-L provides 2Amp output current and NCT3730S/S-L provides 3Amp output current.

Part No.	Control Input Voltage	Power Input Voltage	Output Current	Dropout	Protections	Others	Package	Status*
NCT3720S/ S-L	3.0V~5.5V	1.0V~5.5V	2A	150mV	UVLP, OCP, SC & Thermal Shutdown	Enable & Power Good	SOP8-EP	P
NCT3730S/ S-L	3.0V~5.5V	1.0V~5.5V	3A	210mV	UVLO, OCP, SC & Thermal Shutdown	Enable & Power Good	SOP8-EP	P

*Status: P= Mass Production, S= Samples, NRFND= Not Recommended for New Design

Others

Nuvoton provides some useful ICs for BOM saving, easy to use and cost-effective solutions to customer applications. Linear fan drivers and SMBus current DAC are widely used in PC or non-PC applications.

The W83391TG is paired with all of Nuvoton's new series of Super IO and Hardware Monitoring IC for DC Fan voltage regulation. The W83391TG provides system designers a high performance and cost-effective solution.

The NCT3940, NCT3941 & NCT3946 are low quiescent current, low dropout linear regulators which are designed with a P-channel MOSFET to power a DC fan and delivers output current up to 500mA. The output voltage follows the 1.6/4.0/6.0 times on the voltage of VSET pin to dynamic adjust the DC fan speed.

NCT3933, NCT3934 & NCT3935 are SMBus current DACs which provide 128 steps sinking/ sourcing adjustable current through SMBus interface. It operates in 3.3V/5.0V voltage and easily uses in power supply margining.

Part No.	Input Voltage (max)	Output Voltage (max)	Channels	Charge Pump Freq.	Output Drive Current	Package	Status*
W83391TG	8V	24V	X 3	180 KHz	45uA	SSOP 14	P
NCT3940S NCT3940S-A	5.5V	5.12V Follows 1.6 times V SET	1	N/A	MOSFET Integrated	SOP8	P
NCT3941S NCT3941S-A	17.6V	17.6V Follows 4.0 times V SET	1	N/A	MOSFET Integrated	PSOP8	P
NCT3946S NCT3946S-A	17.6V	17.6V Follows 6.0 times V SET	1	N/A	MOSFET Integrated	PSOP8	P

*Status: P= Mass Production, S=Samples, NRFND= Not Recommended for New Design

Bus Interface Bridge ICs

PCIe to PCI I/F

The NCT5868D/NCT5862D series is PCI Express to PCI Bridge that provides a solution to connect legacy PCI bus to PCI Express serial bus. The NCT5868D/NCT5862D series implements PCI Express as a primary bus and PCI as a second bus. With Bridge, existing PCI components can plug into PCI Express based system. They have been chosen to be the most economical solution for cost savings.

Part No.	Interface	Features	Package type	Status*
NCT5868D	PCIe to PCI	Supports PCI Express x1 port and 4 external PCI devices. The PCI Express port is fully compliant with PCI Express Base Specification, Revision 1.1. It supports an X1 link operation, allowing 250Mbps throughput in the upstream and downstream direction. It supports a Maximum Payload Size (MPS) of 128 bytes, AER & ECRC, single virtual channel, legacy power management and ASPM L0s.	128 Pin LQFP	P
NCT5862D	PCIe to PCI	Supports PCI Express x1 port and 2 external PCI devices. The PCI Express port is fully compliant with PCI Express Base Specification, Revision 1.1. It supports an X1 link operation, allowing 250Mbps throughput in the upstream and downstream direction. It supports a Maximum Payload Size (MPS) of 128 bytes, AER & ECRC, single virtual channel, legacy power management and ASPM L0s.	128 Pin LQFP	P

*Status: P= Mass Production, S= Samples, NRFND= Not Recommended for New Design

EC & NB Keyboard Controller

Advanced Embedded Controller

Embedded controllers (EC) for notebook applications enable the implementation of flexible solutions; and a high-performance CPU core enables EC functionality to be extended via the firmware.

Part No.	Description	Status*
NPCE78nx	LPC Embedded Controller with extended functionality for Notebook Keyboard Control and Power Management with shared BIOS interface, low-cost I/O expansion interface and enhanced LED control. LQFP128 package.	P
NPCE791x	LPC Embedded Controller with extended functionality for Notebook Keyboard Control and Power Management with shared BIOS interface, on-chip Clock Generator and PECI3.0 interface. LQFP128 package.	P
NPCE795x	LPC Embedded Controller with extended functionality for Notebook Keyboard Control and Power Management with shared SPI Flash interface, on-chip Clock Generator, large on-chip RAM and PECI3.0 interface. LQFP128 and TFBGA128 package options.	P
NPCE885x NPCE895x	Highly integrated embedded controller (EC) with a high performance embedded RISC core and integrated advanced functions. It is targeted for a wide range of portable applications and provides best-in-class complete EC functionality such as KBC, Power Management, enhanced debug capability and more. LQFP128, TFBGA128 and TFBGA144 package options.	P
NPCE69x	The NPCE69x family of devices is a 64-pin highly integrated embedded controller (EC) with an embedded RISC core and integrated advanced functions. It is targeted for small form factor portable applications such as netbooks and tablets, and provides best-in-class, complete EC functionality. It supports both LPC and I ² C host interfaces. LQFP64.	P

*Status: P= Mass Production, S= Samples, UD= Under Development, UD (Time)= Under Development(Ready Time),

NRFND= Not Recommended for New Design, EOL= End of life

Security

SafeKeeper™ TPM

The Nuvoton TPM (WPCT21x, NPCT42x and NPCT50x), a single-chip, Trusted Platform Module (TPM), is a third generation Nuvoton SafeKeeper™ device that implements the Trusted Computing Group (TCG) version 1.2 specifications for PC-Client TPM. It provides a complete solution for PC security for a wide range of PC applications. For more technical information, please Contact Sales.

Part No.	Description	Interface	EK Certificate Support	Status*
WPCT21x	SafeKeeper™ stand-alone Trusted Platform Module (TPM) Compliant with TPM Main Specification Version 1.2 Revision 103 and TCG PC Client Specific TPM Interface Specification (TIS) Version1.2.	LPC	N	NRFND
NPCT42x	SafeKeeper™ stand-alone Trusted Platform Module (TPM) Compliant with TPM Main Specification Version 1.2 Revision 116 and TCG PC Client Specific TPM Interface Specification (TIS) Version 1.21. Now available also in 5x5mm2 QFN32 package form.	LPC	Optional	P
NPCT50x	SafeKeeper™ stand-alone Trusted Platform Module (TPM) Compliant with TPM Main Specification Version 1.2 Revision 116. Now available also in 5x5mm2 QFN32 package form.	I ² C	Optional	P

Foundry Service

Nuvoton Foundry FAB

Nuvoton Foundry FAB (previous Winbond FAB2: 6 inch fab) has a capacity of 45,000 wafers per month for foundry service since year 2008. Nuvoton Foundry FAB offers a variety of technologies including Generic Logic, Mixed Signal (Mixed Mode), High Voltage, Ultra High Voltage, Power Management, Mask ROM (Flat Cell), embedded Logic Non-Volatile Memory processes, etc. based on 0.35um to 0.6um technologies. As a semiconductor manufacturing foundry, our goal is to deliver excellent foundry capabilities as a manufacturing partner to fabless or fab-lite semiconductor companies.

Technology

Power and High Voltage Process

Modular Process is realized for Power Management IC, LCD driver, LED driver, and Green Mode (Start-Up) application in 0.6um 5V/40V/UHV modular process, which included 5V Logic MOS, Power MOS, HV MOS, and Ultra HV MOS etc.

Embedded Logic-Based Non-Volatile Memory (NVM) Process

Nuvoton Technology Foundry FAB 0.35um 3.3V/5V process offers 3.3V logic-based Non-Volatile Memory (NVM) Intellectual property (IP) which provided by third party YMC (Yield Microelectronics Corporation). The NVM IP owns competitive cell and macro size, adopting logic-based architecture, and featuring the scalability. YMC NVM IP is Byte Write and Byte Read operation. Low standby current (0.2uA), and Low read voltage (1.2V) IP are available. In Nuvoton, YMC NVM IP products are categorized into three types, including embedded MTP IP, embedded EEPROM IP, and embedded EPROM IP. Complete IP Memory density is available from 256X8 bits to 16KX16 bits.

Application	Target Product	Function
Trimming	LCD Driver, LED Driver, Touch Panel, Power IC, STB Control, Image Capture Control	Fuse Like
Parameter Setting	LCD, LED, Battery Pack Protection	Status Parameter, Logic function
Encryption	LCD, STB, Smart Card	Security confirm code
Function Selection	SoC product Function selector	SoC Function Control
Identification Setting	Product ID, TagIC <13.5MHz	ID Code
Code Storage	4/8 bits MCU	Program, Data Storage

Available Technologies

Process	Technology	Process Feature
Logic / Mixed Mode	0.35um	3.3V / 5V Mixed Mode
	0.45um	3.3V, 5V Mixed Mode
	0.5um	3.3V, 5V Mixed Mode
Embedded Logic NVM	0.35um	3.3V / 5V Mixed Mode embedded NVM
Mask ROM	0.35um	3.3V / 5V Logic embedded 0.32um Flat Cell
	0.5um	5V Logic embedded 0.37um Flat Cell
	0.35um	5V Modular Process
High Voltage / Power	0.6um	5V/12V CDMOS
		5V/16V CDMOS
		5V/20V Low-Vgs CDMOS
		5V/40V Dual-Vgs CDMOS
		5V/40V/800V UHV

Foundry Service

Multi-Layer Mask (MLM), and Multi-Project Wafer (MPW) Services

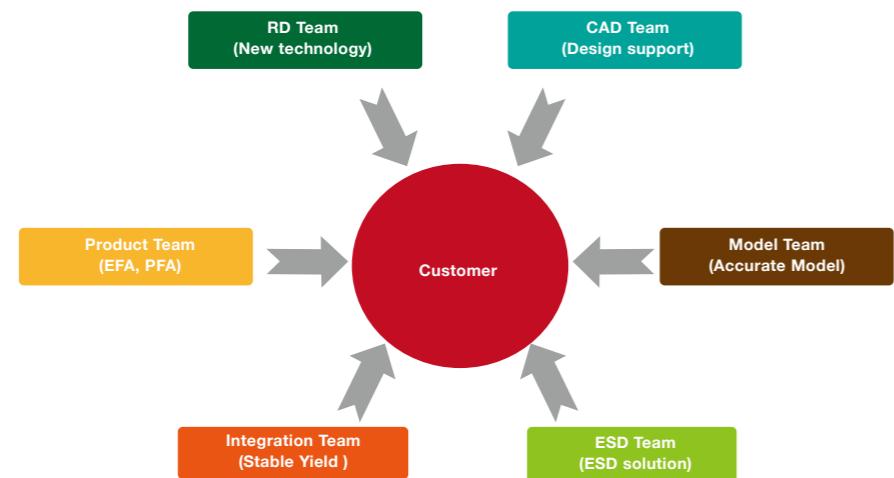

Nuvoton's Multi-Chip and Multi-Layer Mask (MLM) services are available for engineering lot for all processes. The MLM service configures images from four design layers with similar mask specifications onto a single reticle. This service not only saves your development cost, but provides tape-out flexibility that customers can launch their tape-out product at any time without being dependent on pre-set prototyping schedules. Nuvoton's Multi-Project Wafer Service offers platform for multiple customers sharing mask tooling costs through a multi-project wafer in prototyping product.

Customized Process and Excellent Cycle Time

Customized Process and Excellent cycle time support for your Prototyping and Time to Market, and a strategic product can enjoy 0.8D/Layer without extra charge.
