1. Products and Application

This specification defines general specification and performance for Flat panel LED module. Samsung Finger-SQ64B, Finger-RT64B Modules maintains a high degree of light uniformity from the optimized arrangement of LEDs and it's better solution to replace conventional fluorescent tubes as T5, T8 and so on. Due to transferring LED, new luminaire transferred to LED can take more energy saving and longer life-time.

In special, Samsung has competitiveness in middle-power solutions. This module uses LM561B (5630G2) that is one of the best class of MPL. Middle power solutions provide more homogeneous and higher efficient lights.

3-3. Assembly

① 2x2 (600x600mm) by Finger-SQ64B x 4 pcs with 2-ch driver
② 1x4 (300x1200mm) by Finger-RT64B x 4 pcs with 2-ch driver
③ Connector : Terminal strip type
AWG 24-18

(1) Insert solid conductors via push-in termination.

(2) Insert or remove fine-standard conductors by lightly pressing on push-button.
④ Wire Harness

6. Precautions In Handling

1) LED Lighting for white light are devices which are materialized by combining white LEDs.
The color of white light can differ a little unusually to diffuser plate(sign-board panel).

2) Handling
- Don't drop the unit and don't give the unit any shocks.
- Don't storage the Module in a dusty place or room.
- Don't take the unit to pieces.

3) Cleaning
- This LED Module should not be used in any type of fluid such as oil, organic solvent, etc.
- It is recommended that IPA(Isopropyl Alcohol) be used as a solvent for cleaning the LED Module.
- When using other solvents, it should be confirmed beforehand whether the solvents will dissolve the package and the resin or not. Freon solvents should not be used to clean the LEDs because of worldwide regulations. Do not clean the LED Module by the ultrasonic.

- Before cleaning, a pre-test should be done to confirm whether any damage to the LED
  Lighting will occur.

4) Static Electricity
  - Static electricity or surge voltage damages the LED Lighting.

5) Discoloration
  - VOCs (volatile organic compounds) may be occurred by adhesives, flux, hardener or organic
    additives which is used in luminaires (fixture) and LED silicone bags are permeable to it. It may
    lead a discoloration when LED expose to heat or light.
  - This phenomenon can give a significant loss of light emitted(output) from the luminaires(fixtures).
  - In order to prevent these problems, we recommend you to know the physical properties for the
    materials used in luminaires, it requires to select carefully.

6) Risk of Sulfurization (or Tarnishing)
  - The lead frame from Samsung Electronics is a plated package and it may change to black
    (or dark colored) when it is exposed to Ag (a), Sulfur (S), Cchlorine (Cl) or other halogen compound.
    It requires attention.
  - Sulfide (Sulfurization) of the lead frame may cause a change of degradation intensity, chromaticity
    coordinates and it may cause open circuit in extreme cases. It requires attention.
  - Sulfide (Sulfurization) of the lead frame may cause of storage and using with oxidizing substances
    together. Therefore, LED is not recommend to use and store with the below list.
    : Rubber, Plain paper, lead solder cream etc.

7) Others
  - If over voltage which exceeds the absolute maximum rating is applied to LED Lighting,
    it will cause damage Circuits(that LED is included) and result in destruction.
  - Do not directly look into lighted LED with naked eyes for long time.
