## Main Load Disconnecter Switch (Isolator) IS

- Load circuit breaker with isolating function
- Design according to IEC/EN 60947-3
- Highly wear resistant contacts
- Quick make, black toggle
- Terminal capacity 50 mm<sup>2</sup>
- Compatible busbars with switchgear series Xpole by use of the mouth terminal in combination with standard fork busbar

### Mechanical

Frame size	45 mm
Device height	80 mm
Device width	17.5mm/pole
Mounting	quick fastening with 2 lock-in positions on DIN rail IEC/EN 60715
Degree of protection, built-in	IP40
Terminal protection	finger and hand touch safe according to BGV A3
Terminals	Twin-purpose terminals
Terminal capacity	2.5 - 50 mm <sup>2</sup>
Busbar thickness	0.8-1.0 mm
Fastening torque of terminal screws	2.5 - 5 Nm
Function	irrespective of the position of installation

### Dimensions (mm)

### Switching interlock IS/SPE-1TE

- Without lock
- Also suitable for PFIM, CFI6, PKNM, CKN6

### Terminal Cover Caps Z-IS/AK-1TE

- Can be sealed with leads
- Modular design, width 1 MU

## MCB for Auxiliary Switch Circuits PLSM-B4/-HS, CLS6-B4/-HS

- Design according to EN 60898-1, 4 A, Characteristic B
- Very low let-through energy in order to prevent contact welding in auxiliary switches of **any and all switchgear**, as well as thermostats control devices, timers, etc.
- Busbar connection to CLS6, PFIM, PKN, ...

### Practical Hint

Even auxiliary switches must be protected against overload and short circuit by means of suitable back-up fuses according to manufacturer specification. According to IEC 60947-5 a maximum back-up fuse is specified for conditional short circuit prevention up to 1,000 A. Therefore, connection of the auxiliary switch to the nearest MCB is not permitted. Danger of contact welding! The MCB for auxiliary switch circuits ...-HS offers a simple solution.

# Controlling & Switching

## Rotary Switch Z-DS

- Rotary switches of series Z-DS are of a modular design: The switch proper consists of the engaging work and the switching package. The switching cams (for which it is also called cam switch) are driven by a stable, torsion-proof aluminium shaft. The switching package consists of one or several switching cells with one or two independent contacts. Connections of adjoining switch terminals (necessary in case of voltmeter changeover switch Z-DSV) are contained in the pressed switch component. Consequently, there is no obstacle when connecting the connection lines.
- Application: Suitable for virtually any application, e.g. motor switch, garage doors, fans, shutters, heating system control, lighting fixtures, instrument switches, different control purposes, etc.

# Controlling & Switching

## Relay for low-level signals RELLVA, REHLVA, REMLVA

The electronic relay is a universal switching device designed especially for transmitting small or low-level signals of electronic control systems.

The **RELLVA** has been designed to switch low-level signals. The relay can be energized through analogue control signals of a roller-shutter or heating control, for example. The switching contact allows to switch a binary signal for digital inputs, for example of a programmable controller, of a control relay (e.g. EASY control relay) or of a Z-CC Communication Centre.

The **REHLVA** in turn can switch higher loads of up to 5A 250V AC1. It can be energized through a binary signal of a digital output, for example. The switching contact can switch electrical consumers of up to

5A 250V AC1, but it can also be used for energizing contactors, for example. The **REMLVA** is a combination of the relays mentioned above. One relay is equipped with the switching contact for low-level signals, the other one with the switching contact for higher loads up to 5A 250V AC1.

The multi-functional coil, which can be energized in a range from 24V to 250V AC and DC, covers a wide variety of applications. In addition, all types have two relays for separate energizing in one enclosure of 1 MU width.

- Electronic switching relay
- Universal control voltage range from 24 to 250V AC/DC with a minimum of power consumption
- Switching of very small signals from 10mV / 1µA
- Switching of higher loads of up to 5A 250VAC AC1
- 2 relays for separate energizing in one enclosure of 1 MU width
- 1 change-over contact for each relay with switch position indication by LED
- No switching noise, hum-free
- Railway service qualification tested

## Installation Relays Z-R, Z-TN

Installation relays Z-R are suitable for switching 1-phase or 3-phase consumers up to 20 A. These devices for universal use in building installations and systems permit implementation of the following applications and control functions:

- Switching lighting systems and electrical heating systems
- Switching ventilation and air conditioning systems, fans
- Switching heat pumps
- Switching electrically controlled roller doors/gates, and blinds
- Switching incandescent lamps and gas discharge lamps

The installation relays of series Z-R./ meet the requirements of standards EN/IEC 60947 and EN/IEC 1095.

**EN/IEC 1095** deals with "Electromechanical contactors for household and similar purposes." Compliance with this standard means meeting very high demands in terms of safety for humans and property.

**EN/IEC 947** deals with "Electromagnetic contactors in electrical system manufacturing".

### Security:

- Manual operation for testing purposes
- Switching contacts with safe disconnection AC1 according to EN 60947-4-1 (Z-R, Z-RK)
- Optional optical operating status display by means of LED
- Switching position indicated on the front side by manual operating key
- All terminals - coil and contacts - equipped with guide for secure terminal connection. Misplacement of wires impossible.
- Main contacts can be connected to standard pin busbar
- Made of hardly flammable materials and plastics free from chlorine and halogens
- Finger and hand touch safe according to VBG4

### Advantages:

- Available in three versions (Z-R, Z-RK, Z-RE)
- Low switching noise, no humming
- Easy to connect thanks to large terminals supplied open
- Simple snap-on fastening on 35 mm DIN rail
- High degree of flexibility thanks to a variety of contact configurations
- Easy access for coil feed connection
- Version with mechanical pre-selection of functions ON/AUTO/OFF (Z-TN)  
*ON/permanently ON:* Contact permanently ON until a control pulse is switched on and OFF again. Then, the relay reverts to the AUT position.  
*AUT/AUTOMATIC:* Standard relay function by control voltage at the coil.  
*OFF/permanently OFF:* Contacts permanently OFF, independently of the control voltage at the coil.
- Type Z-TN available only in AC, other coil voltages than 24V and 230V on request

AC-7a (according to EN 61095) $\text{\textcircled{M}}$	
Rated operational voltage $U_e$	240/415 V AC
Rated operational current $I_e$	20 A AC
Rated operational power AC-7a	4000 W ( $\cos \varphi = 0.8$ ), 5000 VA

AC-7b (according to EN 61095) $\text{\textcircled{M}}$	
Rated operational voltage $U_e$	240/415 V AC
Rated operational current $I_e$	10 A AC
Rated operational power AC-7b	1125 W ( $\cos \varphi = 0.8$ ), 2500 VA

Endurance	electrical comp.	$\geq 40 \times 10^3$ operating cycles
	mechanical comp.	$\geq 1 \times 10^6$ operating cycles

### Mechanical

Frame size	45 mm
Device height	90 mm
Device width	17,5 mm (1MU)
Mounting	quick fastening on DIN rail IEC/EN 60715
Degree of protection installed device	IP20
Position of device in use	works in any position, however not hanging
Upper and lower terminals	lift terminals (captive)
Terminal capacity	
Contact and coil	0,5 - 10 mm <sup>2</sup> one- or more wire 0,5 - 6 mm <sup>2</sup> fine-wire with wire end sleeve
Temperature range	-20°C to +45°C
Total contact gap	> 5mm / independent contacts
Contact material	does not contain cadmium

\*)  $\text{\textcircled{X}}$  suitable for insulation, tested on AC-1

# Controlling & Switching

## Installation Contactors Z-SCH, CMUC

These Installation Contactors are design to cover all applications in residential and commercial sites as for as example:

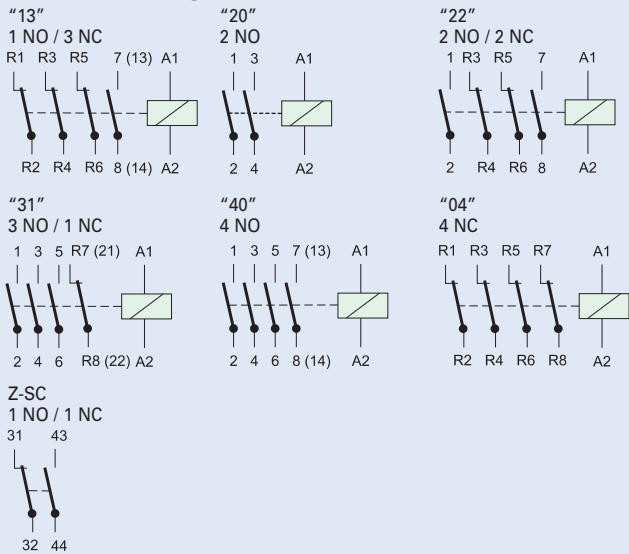

- Switching of lighting systems
- Switching of electrical heating systems
- Switching of ventilation systems
- Switching of air conditioning systems and fans
- Switching of heat pumps
- Switching of roller doors/gates and blinds
- etc. etc.

### Advantages and Safety:

- Front-side switch position indicator
- Compact frame
- Large terminals
- Low switching noise
- No humming
- High contact force for high switching capacity
- Simple snap-on fastening of 35mm DIN rail
- Finger and hand touch safe according to VGB 4
- Hardly flammable materials and chlorine-free and halogen-free plastics are used
- Z-SCH  
Innovative AC magnet system
- CMUC  
Innovative AC/DC magnet system

These products meets the requirement of the standards IEC/EN 60947-4-1 and IEC/EN 61095

### Connection diagrams

### Permitted Installation Positions

### Packing Density at full contact load

Z-SCH / CMUC

Spacers recommended!

## Installation Contactors Z-SCH for Lighting Systems

The decisive factors are the type, connection and current consumption of lamps during switch-on and in permanent operation. Only 90 % of the continuous current of switching devices should be used in view of higher current consumption as a result of increases of voltage. The maximum number of lamps per phase that can be operated by a switching device is dependent

on the nominal current and making current of lamps on the one hand, and on the continuous current and making capacity of the switching devices on the other. Thus, e.g. in lead-lag circuits, the continuous current of contactors can be used, while this is not possible in fluorescent tubes with separate compensation.

# Controlling & Switching

## Incandescent Lamps

The incandescent lamp filament has a very low ohmic resistance when it is cold. Therefore, when switching on, there is a high peak current

(up to  $20 \times I_n$ ).

When switching off, only the nominal current is switched off.

## Fluorescent Tubes, Mercury Arc Lamps

High- and low pressure discharge lamps with mercury vapour, with or without fluorescent-coated glass body are perfectly identical in their electrical behaviour.

In order to limit the operational current and pre-conduction current, and to achieve the initial peak voltage, reactance coils are used as ballast.

Capacitors are used for compensation of the resulting reactive current, which

are either connected in series with the coil (lead-lag circuit) or parallel to the mains (separate compensation, very rarely used now). The high making current in case of separate compensation (max. 30 x nominal current of the capacitor) which goes down quickly is usually attenuated considerably by the feed line.

Utilisation category AC5a		
	Fluorescent lamps without comp. or with series comp.	$I = I_{eAC1} \times 0,5$
	Lead-lag circuit (2x..)	$I = I_{eAC1} \times 0,35$
	Fluorescent tubes parallelkomp.	$I = I_{Spitze} / 100$ (take into account compensation capacitor)
$I / I_{Lampe}$ = number of connectable lamps per current path	Fluorescent tubes with electronic ballast	$I = I_{Spitze} / 50$
	Mercury arc lamps,HD without compensation	$I = I_{eAC1} \times 0,5$
	Mercury arc lamps,HD with compensation	$I = I_{Spitze} / 100$ (take into account compensation capacitor)

# Controlling & Switching

## Metal Halide Lamps

Metal halide lamps are a version of high-pressure mercury arc lamps with higher luminous efficiency and fidelity of colour (metalloids [halogens] added to the mercury fill up the Hg-spectrum with its many gaps). Ballast and ignition devices are necessary. Starting time 3 ... 5 minutes at 1.4 - 2 x I. After switching on, it is not possible to light the lamp again immediately (lamp extinguishes after a power cut-off of only 1/2 period). Therefore, in

many cases in important facilities ionisation of part of the lamps is maintained by switching over to 415 V, 500 Hz (e.g. to an emergency power supply). In this case, the lamp lights immediately after the mains voltage is on again. Otherwise, this would take several minutes. When using suitable ignition devices, the lamps can be lit again immediately.

I / I <sub>Lampe</sub> = number of connectable lamps per current path	Metal halide lamps (HQI) without compensation	$I = I_{eAC1} \times 0,5$
	Metal halide lamps (HQI) with compensation	$I = I_{Spitze} / 100$ (take into account compensation capacitor)
	Transformer for low voltage halogen lamps	$I = I_{Spitze} / 50$

## Sodium Vapour Lamps

For 200 W, 1200 mm high-pressure lamps and low-pressure lamps, reactance coils are used as ballast. For smaller lamps, stray field transformers can be used as ballast. Take into account, the long starting period.

### Low pressure lamps:

*Without compens.*: Making curr.  $1 \times X_{I_e}$ ,  $\cos\phi$  0,3; starting time 5 .. 10min  
Decisive for selection of device: 60% continuous current  
 $I = I_{eAC1} \times 0,6$

*With compensation*: Making curr.:  $20 \times X_{I_e}$ ,  $\cos\phi$  0,45; starting time 5 .. 10min  
(at  $1,6 \times I_n$ ),  $I = I_{Spitze}/200$

### High pressure lamps:

*Without compens.*: Making curr.  $1,4 \times X_{I_e}$ ,  $\cos\phi$  0,5; starting time 5 .. 10min  
Decisive for selection of device: 60% continuous current  
 $I = I_{eAC1} \times 0,6$

*With compensation*: Making curr.:  $20 \times X_{I_e}$ ,  $\cos\phi$  0,95; starting time 5 .. 10min  
(at  $1,6 \times I_n$ )

	DC-5	Series motors: starting, plugging, reversing, inching, dynamic braking	all values	2,	1	7,5	2,5	1	7,5	all values	4	1,05	2,5	4	1,05	2,5			
	DC-6	Switching of incandescent lamps									1,5 <sup>2)</sup>	1,05	2)	1,5 <sup>2)</sup>	1,05	2)			

according to IEC 947-4-1, EN 60 947 VDE 0660 Part 102

<sup>1)</sup> cosφ = 0,45 for I<sub>e</sub> ≤ 100 A; cosφ = 0,35 for I<sub>e</sub> ≤ 100 A.

<sup>2)</sup> The tests must be carried out with an incandescent lamp load connected.

<sup>3)</sup> In this case, the test data must be derived from the test values for AC-3 or AC-4 according to a special table.

<sup>4)</sup> Devices for utilisation category AC-3 may be used for occasional inching or plugging during a limited period, such as for setting up a machine. However, during this limited period of time, the number of operations must not exceed five per minute or ten in a ten minute period.

<sup>5)</sup> Hermetically enclosed refrigerant compressor motor means a combination of a compressor and a motor both of which are housed in the same enclosure with no external shaft or shaft seals, the motor running in the refrigerant.

## Utilisation Categories of Auxiliary Switches

Type of current	Utilisation category	Typical Applications  I = Making current, I <sub>c</sub> = Breaking current, I <sub>e</sub> = Rated operational current, U = Voltage, U <sub>e</sub> = Rated operational voltage U <sub>r</sub> = Recovery voltage t <sub>0,95</sub> = the time in ms until 95% of the stationary current has been reached P = U <sub>e</sub> × I <sub>e</sub> = Rated power in Watts	Divergent conditions of use														
			Normal conditions of use			Switching on			Switching off			Switching on			Switching off

AC	AC-12	Control of resistive and solid state loads in optocoupler input circuits	1	1	0,9	1	1	0,9	-	-	-	-	-	-	-	-	-
	AC-13	Control of solid state loads with transformerisolation	2	1	0,65	1	1	0,65	10	1,1	0,65	1,1	1,1	0,65			
	AC-14	Control of small electromagnetic loads (max. 72 VA)	6	1	0,3	1	1	0,3	6	1,1	0,7	6	1,1	0,7			
	AC-15	Control of electromagnetic loads (above 72 VA)	10	1	0,3	1	1	0,3	10	1,1	0,3	10	1,1	0,3			
DC	DC-12	Control of resistive and solid state loads in optocoupler input circuits	1	1	1 ms	1	1	1 ms	-	-	-	-	-	-	-	-	-
	DC-13	Control of electromagnets	1	1	6xP <sup>1)</sup>	1	1	6xP <sup>1)</sup>	1,1	1,1	6xP <sup>1)</sup>	1,1	1,1	6xP <sup>1)</sup>			
	DC-14	Control of electromagnetic loads with economy resistors in the circuit	10	1	15 ms	1	1	15 ms	10	1,1	15 ms	10	1,1	15 ms			

according to IEC 947-4-1, EN 60 947 VDE 0660 Part 102

<sup>1)</sup> The value „6xP“ is the result of an empirical relationship which is found to represent most direct current magnetic loads up to an upper limit of P = 50W with 6 [ms]/[W] = 200 [ms]. Loads with a rated power above 50 W are composed of small loads located parallel to each other. Therefore, 300 ms is an upper limit independent of the power rating.

# Controlling & Switching

## Impulse Relay Z-S.

- Impulse relays according to EN/IEC 60669 for switching electrical consumers in impulse operation.
- Shape and terminal compatible with the installation relay range
- Manual operation for testing purposes is possible
- Separately switchable LED (Z-SB../SS) for signalling purposes
- Glow lamps of illuminated pushbuttons connected parallel produce reactive currents which may be compensated by a capacitor block in order to prevent excessive heating of coils in case of high numbers of glow lamps.
- Glow lamps parallel to control keys according to table
- Main contacts can be connected to standard pin busbar

### Security:

- Optional optical operating status display by means of LED
- Switching position indicated on the front side by manual operating key
- All terminals - coil and contacts - equipped with guide for secure terminal connection. Misplacement of wires impossible.
- Made of hardly flammable materials and plastics free from chlorine and halogens.
- Finger and hand touch safe according to VBG4

### Advantages:

- Available in two versions (Z-S., Z-SB.)
- Low switching noise and no humming
- Easy to connect thanks to large terminals which are supplied open
- Simple snap-on fastening on 35 mm DIN rail
- High degree of flexibility thanks to a variety of contact configurations
- Easy access for coil connection

## Technical Data

### Electrical

Rated current (IEC/EN 60669-2-2)	
250 V AC	16 A
Number of poles	1 to 4
Main contacts	
NO/NC	1 and 2 (1MU); 3 and 4 (2MU)
CO	1 (1MU); 2 (2MU)

### Control Circuit

Rated control feed voltage $U_s$	8, 12, 24, 48, 230 V AC
	8, 12, 24, 110 V DC

Alternative control voltages, frequencies, and contact arrangements upon enquiry

Rated frequency	50 Hz
Operating range	0.9-1.1 x $U_s$
Pickup power of coils	12 VA / 7 W typ.
Max. number of parallel pushbutton units	unlimited
Max. number of parallel illuminated pushbutton units 230 V 0.6 mA typ.	
without compensation	8 units (1MU), 15 units (2MU)
with compensation 1 x Z-SC/KO (Z-S/KO)	23 units (1MU), -
with compensation 2 x Z-SC/KO (Z-S/KO)	46 units (1MU), 43 units (2MU)
Minimum command duration	> 200 ms
Operating noise	no humming
Rated peak withstand voltage $U_{imp}$	2 kV (1.2/50 $\mu$ s)
Duty max.	1h, 100% with spacer

### Load Circuit

Rated operational voltage $U_n$	1p, 2p: 250VAC; 3p, 4p: 240/415VAC
Minimum operational voltage $U_{min}$	24 V AC/DC ( $U_s$ 8-110 V)
Rated insulation voltage $U_i$	500 V
Rated peak withstand voltage $U_{imp}$	4 kV (1.2/50 $\mu$ s)
Conventional thermal current $I_{th}$	16 A AC
Rated operational current $I_e$	16 A AC

Rated constant current $I_u$	16 A AC
Rated current DC	
24 V	$I_e$ 16 A
48 V	$I_e$ 12.5 A
230 V	$I_e$ 1 A
Conditional rated short circuit current $I_q$	10 kA (with 20 A gL/gG)
Duration of bouncing	< 10 ms (typ. < 5 ms)
Endurance electrical comp.	$\geq 40 \times 10^3$ operating cycles
mechanical comp.	$\geq 1 \times 10^6$ operating cycles

### Mechanical

Frame size	45 mm
Device height	90 mm
Device width	17.5 mm per MU
Mounting	quick fastening on DIN rail IEC/EN 60715
Degree of protection installed device	IP20
Position of device in use	works in any position
Upper and lower terminals	lift terminals (captive)
Terminal capacity	
Contact and coil	0.5 - 10 mm <sup>2</sup> one- or more wire
	0.5 - 6 mm <sup>2</sup> fine-wire with wire end sleeve
Temperature range	-20°C to +45°C
Total contact gap	> 5mm / independent contacts
Contact material	does not contain cadmium

# Controlling & Switching

## Impulse Relay with Switchable LED

## Applikation at 24 V AC and DC

# Controlling & Switching

## Impulse Relay Z-SC with Central Control

- Impulse relay according to EN/IEC 60669 for switching electrical consumers in impulse operation.
- Local and central control, capable of switching 2-stage groups
- Shape and terminal compatible with the installation relay range
- Manual operation for testing purposes is possible
- Glow lamps of illuminated pushbuttons connected parallel produce reactive currents which may be compensated by a capacitor block in order to prevent excessive heating of coils in case of high numbers of glow lamps.
- Glow lamps parallel to control keys according to table
- Main contacts can be connected to standard busbar

### Security:

- Switching position indicated on the front side by manual operating key
- All terminals - coil and contacts - equipped with guide for secure terminal connection. Misplacement of wires impossible.
- Made of hardly flammable materials and plastics free from chlorine and halogens.
- Finger and hand touch safe according to VBG4.

### Advantages:

- Low switching noise and no humming
- Easy to connect thanks to large terminals which are supplied open
- Simple snap-on fastening on 35 mm DIN rail
- High degree of flexibility thanks to a variety of contact configurations
- Easy access for coil connection

## Staircase Switch with switch-off warning and stop function TLE, TLK

- Automatic electronic staircase switch
- Switch-off warning can be switched off (type TLK)
- Subsequent switching is possible, programmable long-time function
- Power saving function, low switching noise
- Automatic 3-/4-wire circuit recognition
- Zero voltage safety thanks to memory function (type TLK)
- Central control function (type TLK)
- External voltage control input (type TLK)

### Connection diagrams

e.g. 3 wire circuit TLE

e.g. 4 wire circuit with attic lighting TLK

### Technical Data

#### Electrical

Feed voltage	230 VAC
Rated voltage tolerance	-15%, +10%
Power consumption	6 VA (0.8 W)
Rated frequency	48-63 Hz
Duty	100%
Reset time	500 ms
Adjustment range	0,5 - 15 min.
Overvoltage category	III (in acc. with IEC 60664-1)
Rated surge voltage	4 kV

#### Output

Contact	1 NO (Terminals L-18)
Rated voltage	250 VAC
Constant current	16 A
Switch on peak current (20 ms)	80 A
Switching capacity AC	4000 VA / AC1, 384 W / DC
Maximum current	30 A / < 3s
Switching voltage	250 V AC1 / 24 V DC
Minimum switching capacity DC	500 mW
Output indication	yellow LED (  )
Mechanical endurance	30 x 10 <sup>6</sup> switching operations
Electrical endurance (AC1)	10 x 10 <sup>5</sup> switching op. 16A/250V

#### Control input B1

Connection (carrying voltage)	Pushbutton T-N (3 wire circuit) Pushbutton T-L (4 wire circuit)
Glow lamps parallel to control keys	max. 100 mA

Overload protection electronic

**Control input C1-C2 (Type TLK)** 8-230 V AC/DC

#### Mechanical

Frame size	45 mm
Device height	87 mm
Device width	17.5 mm (1MU)
Installation	quick fastening on DIN rail IEC/EN 60715
Protection class / Pollution degree	IP20 / 2
Type of connection	lift terminal acc. to VBG 4 (PZ1 required)
Terminal capacity	1x 0.5-4 mm <sup>2</sup> 2x 0.5-2,5 mm <sup>2</sup>
Tightening torque	max. 1 Nm
Temperature range	-25°C to +55°C
Operation position	any

### Dimensions (mm)

### Functional Description

#### Automatic timing :

After pushing the button the output relay closes (terminals L-18) and the set time starts to run. If the button is pushed again before the time  $t$  has lapsed the time re-starts from zero (subsequent switching function in accordance with EN 60669-2-3). Repeated quick pressing of the pushbutton ("pumping") leads to the addition of 2, 3 or more time intervals up to 60 min. Pushing the button once for a long time ( $> 2$  s) stops the running lighting period, and the relay switches off (power saving function). In the  function, the device generates short pulses (flickering) as a switch-off warning (according to DIN 18015-2), 15 s, 10 s, and 5 s prior to switching off.

The additional control input permits activating the staircase switch e.g. from an intercom system by means of a voltage from 8 to 230 V AC/DC in the modes  and . This input channel permits starting the lighting time, as well as subsequent switching. Switching off (power saving function) and programming of longer lighting periods ("pumping") is not possible via this input channel.

#### Impulse mode :

In the impulse mode each push of the button makes the output relay switch over. In the function  the output relay is always open after the feed voltage has been applied. In the function  the relay immediately picks up when the feed voltage is applied provided that it was closed prior to the power failure. By applying a short voltage pulse ( $< 2$  s) to the additional control input C1-C2 the relay R is switched on (central ON). A longer voltage pulse ( $> 2$  s) causes the relay R to switch off (central OFF).

### Technical Data

#### Electrical

Design according to	EN 60669
Basic accuracy	±1% (of scale end value)
Setting accuracy	<5% (of scale end value)
Repeating accuracy:	<0.5% or ±5ms
Effect of voltage	-
Effect of temperature	≤0.01% / °C

#### Input circuit:

Feed voltage	
Terminals A1-A2	24V to 240V AC/DC, 24V/-15% to 240V/+10%
Nominal frequency	48 to 63Hz

#### Nominal consumption

Type: ...W	4VA (1.5W)
Type: ...WW	6VA (2W)

Duty	100%
Operational again after	100ms
Residual ripple in case of DC	10%
Release voltage	>30% of min. feed voltage

#### Output circuit:

Switching capacity	potential-free CO
Fuse protection	2000 VA (8A / 250V AC)
Mechanical endurance	8A quick-acting
Electrical endurance	20 x 10 <sup>6</sup> operating cycles
at a resistive load of 1000 VA	2 x 10 <sup>5</sup> operating cycles
Switching frequency	
at a resistive load of 100 VA	max. 60/min,
at a resistive load of 1000 VA	max. 6/min
(in acc. with IEC 60947-5-1)	
Rated surge voltage	4kV
Overvoltage category	III (in acc. with IEC 60664-1)

#### Control contact:

Input carrying potential	Terminals A1-B1
loadable	yes
Maximum line length	10m
Minimum control pulse length	
DC	50ms
AC	100ms
Trigger level (sensitivity)	automatic adaption to supply voltage

#### Mechanical

Frame size	45 mm
Device height	87 mm
Device width	17.5 (/W) and 35 (/WW) mm
Degree of protection, built-in	IP40
Position of installation	optional
Upper and lower terminals	Bow terminal
Terminal protection	finger and hand touch safe, BGV A3, ÖVE-EN 6
Terminal capacity	
1 x 0,5-2,5 mm <sup>2</sup>	with/without multicore cable end
1 x 4 mm <sup>2</sup>	without multicore cable end
2 x 0,5-1,5 mm <sup>2</sup>	with/without multicore cable end
2 x 2,5 mm <sup>2</sup>	flexible without multicore cable end
Tightening torque	
of terminal screws	max. 1 Nm
Permitted relative humidity	15% to 85%
in acc. with IEC 60721-3-3 Class 3K3	
Ambient temperature	-25 to +55°C
in acc. with IEC 60068-1	
Storage and transport temperature	-25 to +70°C
Pollution degree	2
when built in	3

# Controlling & Switching

## Description of Functions

### • ON delay (E)

When the supply voltage U is applied, the set interval t begins (green LED U/t flashes). After the interval t has expired (green LED U/t illuminated) the output relay R switches into on-position (yellow LED illuminated). This status remains until the supply voltage is interrupted. If the supply voltage is interrupted before the expiry of the interval t, the interval already expired is erased and is restarted when the supply voltage is next applied.

### • OFF delay (R)

The supply voltage U must be constantly applied to the device (green LED U/t illuminated). When the control contact S is closed, the output relay R switches into on-position (yellow LED illuminated). If the control contact is opened, the set interval t begins (green LED flashes). After the interval t has expired (green LED U/t illuminated) the output relay switches into off-position (yellow LED not illuminated). If the control contact is closed again before the interval t has expired, the interval already expired is erased and is restarted.

### • Single shot leading edge with control input (Ws)

The supply voltage U must be constantly applied to the device (green LED U/t illuminated). When the control contact S is closed, the output relay R switches into on-position (yellow LED illuminated) and the set interval t begins (green LED U/t flashes). After the interval t has expired (green LED U/t illuminated) the output relay switches into off-position (yellow LED not illuminated). During the interval, the control contact can be operated any number of times. A further cycle can only be started when the cycle run has been completed.

### • Single shot trailing edge with control input (Wa)

The supply voltage U must be constantly applied to the device (green LED U/t illuminated). Closing the control contact S has no influence on the condition of the output R. When the control contact is opened, the output relay switches into on-position (yellow LED illuminated) and the set interval t begins (green LED U/t flashes). After the interval t has expired (green LED U/t illuminated), the output relay switches into off-position (yellow LED not illuminated). During the interval, the control contact can be operated any number of times. A further cycle can only be started when the cycle run has been completed.

### • ON delay with control input (Es)

The supply voltage U must be constantly applied to the device (green LED U/t illuminated). When the control contact S is closed, the set interval t begins (green LED U/t flashes). After the interval t has expired (green LED U/t illuminated) the output relay R switches into on-position (yellow LED illuminated). This status remains until the control contact is opened again. If the control contact is opened before the interval t has expired, the interval already expired is erased and is restarted with the next cycle.

### • Single shot leading edge voltage controlled (Wu)

When the supply voltage U is applied, the output relay R switches into on-position (yellow LED illuminated) and the set interval t begins (green LED U/t flashes). After the interval t has expired (green LED U/t illuminated) the output relay switches into off-position (yellow LED not illuminated). This status remains until the supply voltage is interrupted. If the supply voltage is interrupted before the interval t has expired, the output relay switches into off-position. The interval already is erased and is restarted when the supply voltage is next applied.

### • Flasher pause first (Bp)

When the supply voltage U is applied, the set interval t begins (green LED U/t flashes). After the interval t has expired, the output relay R switches into on-position (yellow LED illuminated) and the set interval t begins again. After the interval t has expired, the output relay switches into off-position (yellow LED not illuminated). The output relay is triggered at a ratio of 1:1 until the supply voltage is interrupted.

### • Asymmetric flasher pause first (lp)

When the supply voltage U is applied, the set interval t1 begins (green LED U/t flashes slowly). After the interval t1 has expired, the output relay R switches into on-position (yellow LED illuminated) and the set interval t2 begins (green LED U/t flashes fast). After the interval t2 has expired, the output relay switches into off-position (yellow LED not illuminated). The output relay is triggered at the ratio of t1:t2 until the supply voltage is interrupted.

### • Asymmetric flasher pulse first (li)

When the supply voltage U is applied, the output relay R switches into on-position (yellow LED illuminated) and the set interval t1 begins (green LED U/t flashes slowly). After the interval t1 has expired, the output relay switches into off-position (yellow LED not illuminated) and the set interval t2 begins (green LED U/t flashes fast). After the interval t2 has expired, the output relay switches into on-position (yellow LED illuminated). The output relay is triggered at the ratio of t1:t2 until the supply voltage is interrupted.

# Controlling & Switching

## Undervoltage Relay REUVM

- When the connection to the three phases and neutral conductor is made the relay is energized in case there is no fault and the green Power LED lights. If the monitored nominal voltage  $U_N$  drops under the switching voltage  $U_S$ , in one, two or all three phases the relay reverts to its de-energized position.
- Optical indication
  - Power...green LED
  - Fault in phases L1, L2, L3...red LED is flashing
  - Loss of Neutral conductor N...green Power LED is flashing
- Single-phase operation: bridge L1-L2-L3

## Digital Time Switches with a Weekly Program, for DIN Rail, TSDW1CO, TSDW2CO

- Spring terminals
- Text-based user guidance on the display
- 56 memory cells
- Interface for memory card (PC programming)
- 10 years power backup (lithium battery)
- Zero-cross switching for a relay-saving way of switching and for high lamp loads
- ON-OFF switching times
- Pre-selected switching
- Permanent ON/OFF switching
- Integrated counter for operating hours
- Vacation program
- Display background lighting (can be switched off)
- PIN coding
- Automatic spring forward/fall back at daylight-saving start and end dates
- For type TSDW1CO: 1 channel
- For type TSDW2CO: 2 channels

## Digital Time Switch with a Weekly Program TSDW1CODG

- Spring terminals
- Text-based operator guidance on the display
- 84 memory cells
- Interface for memory card (PC programming)
- 10 years power backup (lithium battery)
- Zero-cross switching for a relay-saving way of switching and for high lamp loads
- ON/OFF switching times
- Pulse program
- Cyclical program
- Pre-selected switching
- Permanent ON/OFF switching
- Expiry timer
- Integrated counter for operating hours
- Vacation program
- 2 random programs
- Display background lighting (can be switched off)
- PIN coding
- Automatic spring forward/fall back at daylight-saving start and end dates
- Time synchronization is possible by connecting an external aerial, e. g. a TSADCF or TSAGPSKIT aerial set
- 1 Channel
- External input

### Connection example

## Astronomical, digital Timer SA-TD/1W

- Design according to DIN EN 60730
- Digital timer in CMOS-technology
- Microprocessor and quartz control
- Programming by means of multi-function keys
- LCD display
- Programme data saved in case of power failure
- Optionally in each programme impulse time (switching interval 1-99 s) or fixed switching time (shortest switching interval 1 min) are possible
- Direct manual switching of relay ON/OFF
- Manual switching of relay to permanent operation ON/OFF (holiday operation)
- Automatic change to summer/winter time
- Automatic leap year adjustment
- Terminal covers which can be sealed with leads available as accessories

### Block Diagram

## Technical Data

### SA-TD/1W

#### General

Design according to	EN 60730-1, EN 60730-2-7
Rated voltage	230-240 V AC +10%/-15%
Rated frequency	50-60 Hz
Power consumption	max. 6 VA
Drive	Quartz
Accuracy at 20°C	1 s/day
Power reserve at 20°C	10 years
Type of battery	Li
Operating cycles	> 40,000
Degree of protection	IP20
Ambient temperature	-30°C...+55°C
Storage temperature	-30°C...+55°C
Protection class (acc. to EN 60 730-1) upon installation	II

#### Switching contacts

Type of switching contact	1 x change-over contact
Contact material	AgSnO <sub>2</sub>
Switching capacity at 250 V~, cosφ=1	16 A
Switching capacity at 250 V~, cosφ=0.6	10 A

#### Programme features

Switching period	Week
Number of channels	1
Min. switching time	1 min.
Max. programme steps in the memory	732

#### Size & Weight

Module units	2
Width	35 mm
Height	65.5 mm
Length	90 mm
Weight	170 g

#### Terminals

Terminal capacity - fine stranded wire	1.....2.5 mm <sup>2</sup>
Terminal capacity - solid wire	1.....4 mm <sup>2</sup>
Size of terminal screw	M3.5
Type of screw head	PZ size 1
Max. torque	0.8 Nm

## Analog Twilight Switches, for DIN Rail, SRSD1NO, SRSD1COW

- Analog twilight switch
- External surface-mounted light sensor is incl. in the scope of delivery
- Indication of the channel and switching status
- Brightness level can be continuously adjusted
- Type SRSD1NO: fixed switch-on and switch-off delay
- Type SRSD1COW: Variable switch-on and switch-off delay
  - Spring terminals
  - Expanded brightness range and variable delay time
  - Five adjustable brightness ranges for easy setting of the lux value
  - Zero-cross switching
  - Permanent OFF and permanent ON function can be set at the potentiometer
  - Test function

### Switching diagrams

# Controlling & Switching

## Surface-Mounted Twilight Switch SRSW1NO

- Twilight switch with an integrated light sensor
- Cable entry is possible at the rear or from the bottom
- Large terminal area
- Setting the brightness value is possible from outside, without the need to open the device
- Wide angle of light incidence (approx. 180°)
- Test button
- Switch-on and switch-off delay can be adjusted
- Brightness level can be continuously adjusted
- Expanded brightness range

Switching diagram

## Twilight Switch with Timer, for DIN Rail, SRCD1CO

- Twilight switch with an integrated weekly timer
- Adjustable switch-on and switch-off delay
- Brightness levels and switching-delay can separately be set for switch-on and switch-off
- Fixed times for ON and OFF (e.g. interruption during the night)
- DuoFix spring terminals
- Zero-cross switching to protect the relay contact and the lamp so as to increase their service life
- Interface for the OBELISK top2 memory card (PC programming)
- Light sensor included in the scope of delivery
- Permanent ON/OFF switching
- Test function
- Pre-selected switching
- Display background lighting
- PIN coding
- Counter for operating hours
- Display of the channel and switching status
- Vacation and holiday program with annual function for fixed date and variable date holidays (e.g. the ones that depend on Easter)
- Different rules can be selected for daylight-saving start and end or they can be freely selected
- For type SRCD1CO:
  - Analog twilight switch
  - 1 Channel
  - Analog setting of brightness levels

## Light Intensity Switch for support rail assembly DS-TA, DS-TD

- Device for automatic control of lighting systems
- For outdoor installation
- Wall mounting IP55
- With integrated light sensor
- Brightness range infinitely adjustable
- **Type DS-TA:** can be combined with timers for time and light-dependent control
- **Type DS-TA:** with integrated timer
- With make and break-time delay
- Suitable for street lighting, yard or general outdoor lighting

# Controlling & Switching

## Communication Center Z-CC/2CO

- Compact remote monitoring and controlling unit
- The Communication Center keeps you informed for example, when the RCD has tripped or when the room temperature in your weekend cottage is too low. Connect your alarm lines from fire detectors or security systems to the Communication Center directly. Switch pumps, heating systems or other devices with your mobile phone by SMS.
- The device can be fully configured via SMS (optionally it can be configured via the Web-Browser of a connected PC)
- Integrated quad-band GSM modem
- 4 Digital inputs
- 2 Relay outputs
- Activated inputs triggers sending of SMS messages and e-mails up to 3 phone numbers and one e-mail address
- Controlling outputs via SMS
- The current status can be checked by SMS anytime
- Compatible with SIM cards of all common mobile communication providers (no SIM lock)
- It is also possible to check the current credit available on prepaid phone cards
- Connection to customer's network is possible
- Permanent intern control of the modem - functions are shown on the front LEDs

### Accessories:

Power supply unit	EASYPOW200	229424
Temperature sensor for serial interface	Z-CC/2CO-SE	119430
Cross-over patch cord CAT5e	DNW-PX/0200/RJ45/ RJ45/5E/CSUTP/GR/PV	237271

## Technical Data

### Electrical

Power supply	12-24 VDC (min. 10 VDC up to a max. of 30 VDC)
Power consumption	1.5 W up to a max. of 6 W
Temperature sensor	d = 15.8 mm, length 106mm, cable of 1.4 m length incl. 9-pole sub-D-plug for RS232 connector Measuring range -10°C to +50°C Accuracy: +/- 2°C
Outputs	2 potential-free relay outputs AC: 5 A at 250 VAC DC: 5 A up to 30 VDC, 0.3 A up to 110 VDC and 0.12 A up to 220 VDC Max. switching capacity AC15 at 230 VAC: 500 VA
Inputs	4; max. 12-24 VDC (2-4 mA), galvanically separated (optical coupler)
Ethernet interface	For parameterization via a PC (Web-Browser). Connection to the PC and Communication Center (Z-CC/2CO) by means of a cross-over network cable (DNW-PX/0200/RJ45/RJ45).
RS232 interface	9-pole sub-D-plug; for connecting an external temperature sensor
Green LED ON	Modem Status LED (LED flashes every 3 seconds during registration at the GSM-net)
Red LED ON	Modem Activity LED (LED flashes when a SMS is sended or received)

### Mechanical

Frame size	45 mm
Device height	97 mm

## Signal bell ASBELL, Buzzer ASBUZZ230

- Signal bells and buzzers are typically used in residential buildings and in functional buildings such as shops, offices, banks etc. They are either used to signalize alert conditions, or generally as audible sound signals.
- These devices are built-in devices installed in distribution cabinets. They are designed for short-time operation in compliance with the IEC 62080 standard.
- Space-saving design of one module unit only.
- Safe device protection thanks to PTC to avoid overloads and short-circuits.

Permitted relative humidity	<95%	<95%	<95%	<95%	<95%
Rated ambient temperature	40°C	40°C	40°C	40°C	35°C
Temperature rise at intermittent duty (20 x 1min. 100% and 5min. 20%)	24 K	24 K	24 K	26 K	31 K
Insulation class	E	E	E	E	E
Glow wire-test	850°C	850°C	850°C	850°C	850°C

### Dimensions (mm)

### Practical Hint

Safety transformer  
(Fail-safe = no danger in case of failure)

Bell transformer

Short circuit-proof transformer

According to EN 61558

# Controlling & Switching

## Safety Transformers TR-G./..-SF

- Safety transformers with separate windings according to EN 61558
- Accessories: Surface Mounting Set (mounting plate, terminal covers)

### Connection diagrams (e.g.)

### Technical Data

	TR-G2/24-SF	TR-G2/24-SF2	TR-G2/63-SF
<b>Electrical</b>			
Rated output	24 VA	24 VA	63 VA
Rated supply voltage range at terminals	230-240 V AC	230-240 V AC	230-240 V AC
Rated frequency	50 Hz	50 Hz	50 Hz
No-load current	22 mA	58 mA	60 mA
Rated supply current	100/150 mA	140/135 mA	340 mA
Primary resistance	133 Ω	92 Ω	41 Ω
Rated output voltage at terminals	8/12 VAC	12/24 VAC	12/24 VAC
No-load output voltage	9.9/15.6 V	13.3/26.8 V	13.6/27.3 V
Output voltage at rated output current	8.2/12.3 V	11.6/23.8 V	12/24.1 V
Secondary resistance	0.5/0.75 Ω	0.45/0.95 Ω	0.15/0.6 Ω
Power loss in no-load operation	1.8 W	4.3 W	4.1 W
Total power loss at nominal load	10.4 W	6.3 W	19.6 W
Duty	100%	100%	100%
Short circuit proof	inherently (PTC)	inherently (PTC)	inherently (PTC)
Test voltage (primary-secondary)	5 kV	5 kV	5 kV
Pollution degree	P2	P2	P2
<b>Mechanical</b>			
Frame size	45 mm	45 mm	45 mm
Device height	90 mm	90 mm	90 mm
Device width	54 mm	90 mm	90 mm
Weight	604 g	1087 g	1256 g
Mounting	quick fastening on DIN rail IEC/EN 60715		
Degree of protection, built-in	IP40	IP40	IP40
Upper and lower terminals	lift terminals	lift terminals	lift terminals
Terminal capacity	1 - 3x2,5 mm <sup>2</sup>	1 - 3x2,5 mm <sup>2</sup>	1 - 3x2,5 mm <sup>2</sup>
Tightening torque of terminal screws	0,5 Nm	0,5 Nm	0,5 Nm
Permitted relative humidity	<95%	<95%	<95%
Rated ambient temperature	25°C	35°C	25°C
Temperature rise at uninterrupted duty	56 K	34 K	51 K
Insulation class	E	F	F
Glow wire-test	850°C	850°C	850°C

### Technical data

#### Position switch LS-11

#### General information

Standards and regulations	IEC/EN 60947	
Climatic resistance	Humidity and heat, constant, according to IEC 60068-2-3 Humidity and heat, periodic, according to IEC 60068-2-30	
Ambient temperature	°C	-25 to +70
Mounting position	any	
Degree of protection	IP66	
Cage-Clamp <sup>1)</sup> terminal capacity		
Solid	mm <sup>2</sup>	1 x (0.5-2.5)
Flexible with ferrule according to DIN 46228	mm <sup>2</sup>	1 x (0.5-1.5)

#### Current paths/Switching capacity

Rated peak withstand voltage $U_{imp}$	V AC	4000
Rated insulation voltage $U_i$	V	400
Overvoltage category/Pollution degree	III/3	
Rated operating current $I_e$		
AC-15		
24 V	A	6
230/240 V	A	6
400/415 V	A	4
DC-13		
24 V	A	10
110 V	A	1
220 V	A	0.5
Circuit safety $H_F$		
at 24 V DC / 5 mA	failure rate	$< 10^{-7}$ , $< 1$ failure to $10^7$ operations
at 5 V DC / 1 mA	failure rate	$< 5 \times 10^{-6}$ , $< 1$ failure to $5 \times 10^6$ operations
Supply frequency	Hz	max. 400
Short-circuit resistance when closed (IEC/EN 60947-5-1)		
Without fuse	Type	PKZM0-10/PLSM-B6
Max. fuse gG/gL	A	10
Short-circuit resistance IEC/EN 60947-5-1		
Max. fuse gG/gL	A	6
Repetition accuracy	mm	$\pm 0.02$

#### Mechanical specifications

Lifespan		
Standard-action switch	operations x $10^6$	8
Snap-action switch	operations x $10^6$	8
Contact temperature of the actuating roller	°C	$\leq 100$
Shock resistance (half-sinusoidal shock 20 ms)		
Standard-action switch	g	25
Snap-action switch	g	2
Basic device	g	-
Operating frequency	operations/h	$\leq 6000$

<sup>1)</sup> Cage-Clamp is a registered trademark of Wago Kontakttechnik, D-32423 Minden

### Technical data

#### DILM, DILA, ZB

#### General information

Standards and regulations	IEC/EN 60947, VDE 0660, UL, CSA		
Mechanical lifespan			
AC-operated	operations x 10 <sup>6</sup>	10	
DC-operated	operations x 10 <sup>6</sup>	10	
Mechanical operating frequency			
AC-operated	operations/h	9000	
DC-operated	operations/h	9000	
Climatic resistance	Humidity and heat, constant, according to IEC 60068-2-78 Humidity and heat, periodical, according to IEC 60068-2-30		
Ambient temperature			
Open	°C	-25 to +60	
Hermetically enclosed	°C	-25 to +40	
Storage	°C	-40 to +80	
Mounting position	AC and DC-operated		

#### Shock resistance (IEC/EN 60068-2-27)

Half-sinusoidal shock 10 ms			
Main switching elements - make contact	g	10	
Auxiliary switching elements - make contact	g	7	
Auxiliary switching elements - break contact	g	5	

Degree of protection	IP20
Protection against accidental contact in case of vertical actuation from the front (VDE 0106 Section 100)	finger and hand touch safe

#### Main current paths

Rated peak withstand voltage $U_{imp}$	V AC	8000
Overvoltage category/Pollution degree		III/3
Rated insulation voltage $U_i$	V	690
Rated operating current $U_e$	V	690
Secure disconnection according to VDE 0106 Section 101 and Section 101/A1		
between coil and contacts	V AC	400
between the contacts	V AC	400
Making capacity $\cos \varphi$ according to IEC/EN 60947 up to 690 V	A	112

### Dimensions (mm)

#### Contactors DILM7-DILM12

#### Contactors DILM17-DILM32

#### Contactors DILM40-DILM65

#### Motor-protective relay ZB12, ZB32
