

# Variable Frequency Drive / Inverter **Starvert iC5**

0.4 - 2.2kW 1 phase 200 - 230Volts

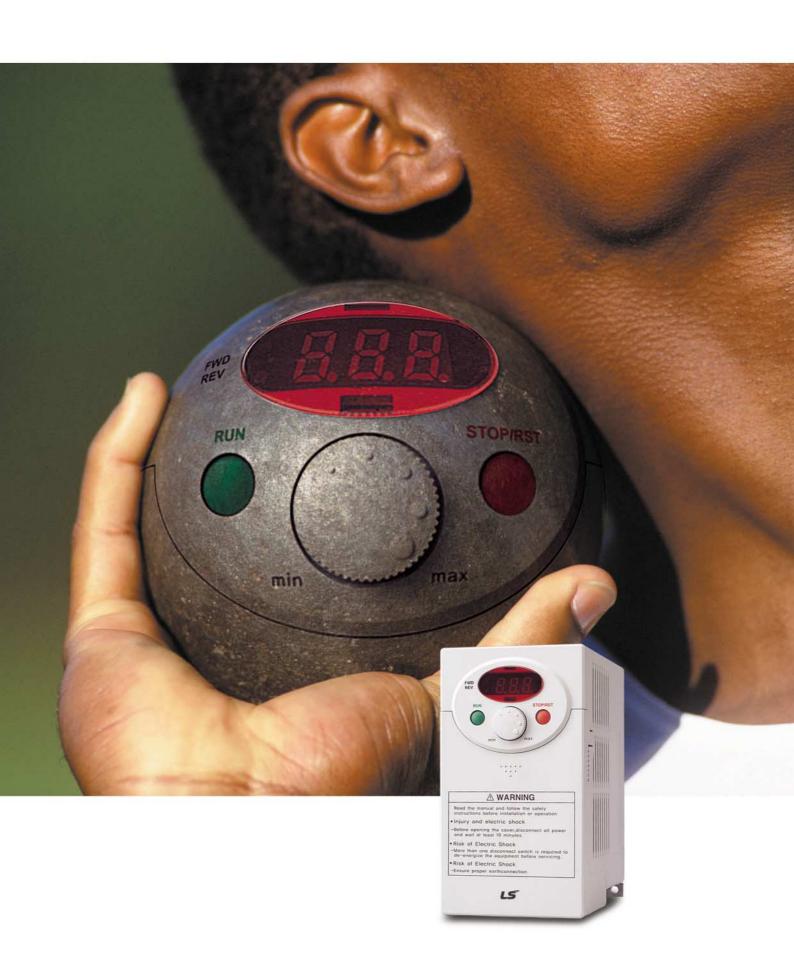

#### **Drive Solution**

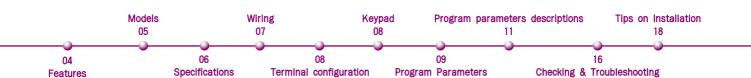

## "Global standard iC5, serves a wide variety of applications to meet the majority of user needs."

- Modbus communication (Option)
- PID control
- Sensorless vector control
- Motor parameter auto tuning

( € c(UL)us ISO9001 ISO14000

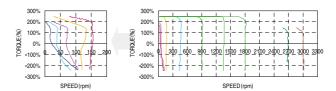

### LS Inverter iC5 Series

#### Sensorless vector control

The iC5 adopts sensorless vector control algorithm, and it improves not only the torque control characteristics, but the speed controlability in an uncertain condition caused by the load variation as well.

### Auto tuning

The auto tuning algorithm in the iC5 sets the motor factors automatically that brings the traditional commissioning difficulties mainly in low speed by the load variation and the low torque generation to a settlement.

- Difficulty of measuring the motor constant Input errors by an user
- Low torque in low speed Low speed by the load variation Setup by an expert

characteristic

- Setup by an user
   Improving torque in low speed
- Auto tuning of the motor characteristics
   Optimized motor control

### PNP and NPN switchable dual signals

The iC5 provides PNP and NPN signals for outside controllers. It works with 24Vdc regardless of the type of PLC or control signals.

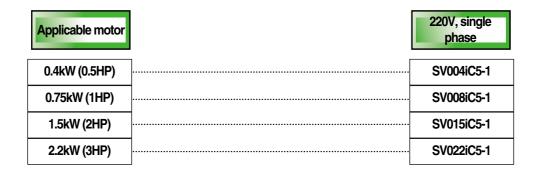

### Communication interface, ModBus-RTU

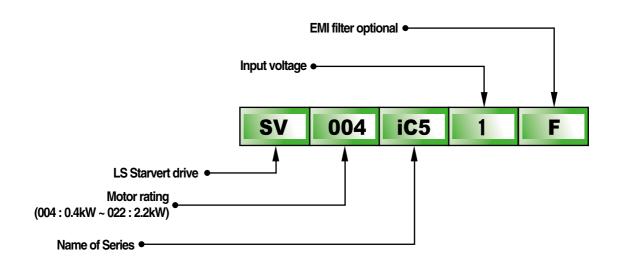

The iC5 provides the most popular communication interface, ModBus-RTU for remote control by PLC or other devices.

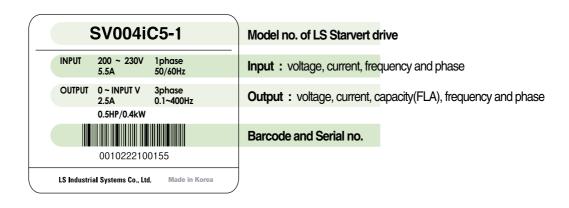

### Programmable PID process control

PID process control is used in iC5 to make speed corrections quickly with a minimal amount of overshoot and oscillation for the control of flow, temperature, pressure and etc.

### ■ Specifications (200-230V class)

| Mod            | del           | SV004iC5-1                               | SV008iC5-1  | SV015iC5-1     | SV022iC5-1 |

|               | Multi-step accel   | 0.1~6000 sec. Max. 8 types available by multi-function terminal    |  |                                   |  |  |  |
|               | /decel time        | Selectable accel/decel pattern                                     | s : Linear, U and S                                  |                                   |  |  |  |
|               | Emergency stop     | Interrupting the output of the drive                               |  |                                   |  |  |  |
|               | Jog                | Jog operation  |  |                                   |  |  |  |
|               | Fault reset        | Reset the fault when protective function is active                 |  |                                   |  |  |  |
| Output signal | Operation status & | Frequency detection, Overload                                      | alarm, Stalling, Overvoltage,                        | Undervoltage,                     |  |  |  |
|               | Fault output       | Drive overheating, Run, Stop, Constant speed, Speed searching,     |  |                                   |  |  |  |
|               |                    | Fault output (Relay and Open collector output)                     |  |                                   |  |  |  |
|               | Indicator          | Choose one from output freque                                      | ncy, current, voltage and DC                         | C voltage.(Output voltage: 0~10V) |  |  |  |
| Operation     |                    | DC braking, Frequency limit, Frequency jump, Second function,      |  |                                   |  |  |  |
| function      |                    | Slip compensation, Reversing prevention, Auto restart, PID control |  |                                   |  |  |  |

#### ■ Protection functions

| Drive trip  | Overvoltage, Undervoltage, Overcurrent, Drive overtemperature, Motor overtemperature, I/O phase loss, I/O mis-wiring, |  |  |
|-------------|---|--|--|
|             | Overload , External device fault 1.2, Loss of speed command, Hardware fault, Communication error, CPU error           |  |  |
| Drive alarm | Stall prevention, Overload alarm  |  |  |
| Momentary   | • Less than 15 msec: keeping operation  |  |  |
| power less  | More than 15 msec : auto restart available  |  |  |

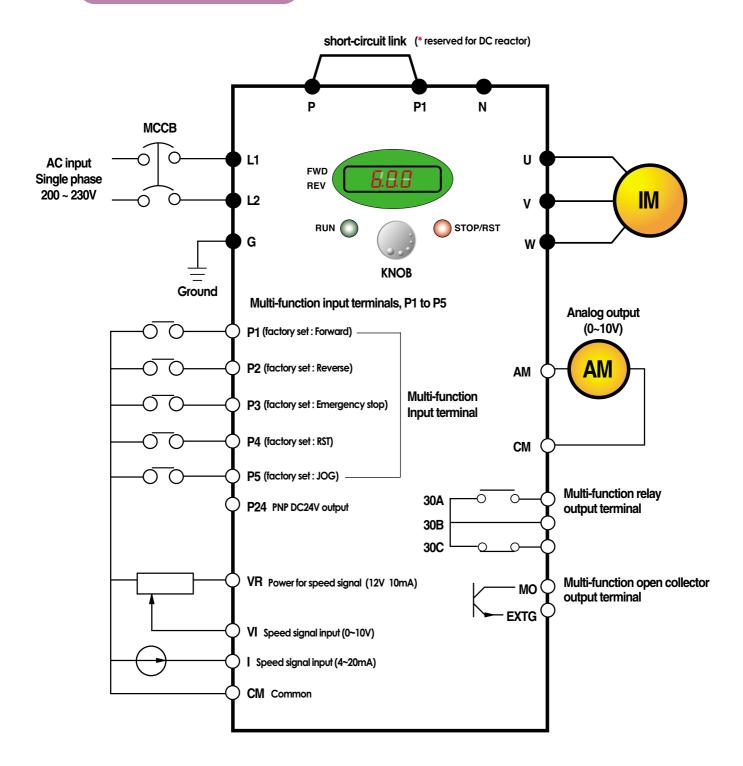

### ■ Display keypad

| Operation information | Output frequency, current and voltage, Set frequency value, Operation speed, DC voltage       |  |  |
|-----------------------|---|--|--|
| Trip information      | Display the trip cause when the protection function activates. Recent 5 faults records stored |  |  |

#### **■ Environment**

| Operating ambient temp. | -10°C ~50°C                                       |
|-------------------------|---|
| Storage temperature     | -20°C ~65°C                                       |
| Humidity                | 90%Rh max.(non condensing)                        |
| Altitude & Vibration    | 1000m max, 5.9m/sec²(0.6g) max.                   |
| Atmosphere              | No corrosive gas, flammable gas, oil mist or dust |
| Pressure                | 70~106k Pa  |

- Note: 1. = Main circuit terminal = Control circuit terminal
  - 2. Analog output voltage is adjustable upto 12V.
  - 3. Speed command can be set by Voltage, Current, Voltage+Current, Keypad, Keypad knob+Voltage, and Keypad knob+current.

## Terminal configuration

## L1 L2 P P1 N U V W G

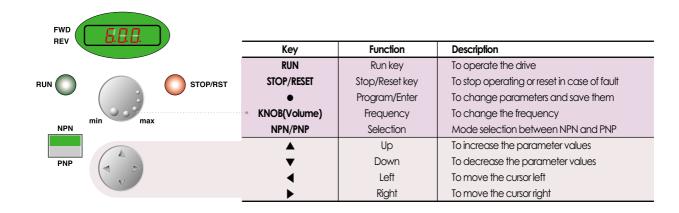

| Terminal | Signal        | Description                       |
|----------|---------------|-----------------------------------|
| L1, L2   | AC line input | Single phase AC line input        |
| U, V, W  | Drive output  | 3 phase output terminals to motor |
| P, P1    | DC reactor    | Connecting DC reactor             |
| G        | Ground        | Chassis ground                    |

| 30A 30B 30C MO EXTG P24 P1 | P2 | CM P3 |
|----------------------------|----|-------|
|----------------------------|----|-------|

| Term   | inal   | Signal                     | Description  |
|--------|--|----------------------------|--|
| Input  | P1, P2   | Multi-function input       | Used for multi-function input. Factory default settings are as follows. P1 = FX, Forward   |
|        | P3, P4, P5   |                            | P2 = RX, Reverse P3 = BX, Emergency stop P4=RST, Fault reset P5=JOG, Jog Operation Command |
|        | P24  | PNP DC24V output           | DC24V power supply in case of PNP mode   |
|        | VR   | Frequency setting power    | Power for Analog frequency setting, Maximum output is +12V 10mA                            |
|        | VI   | Frequency setting(Voltage) | Input DC 0 to 10V to set frequency. Input resistance is 20k $oldsymbol{arrho}$             |
|        | I  | Frequency setting(Current) | Input DC 4 to 20mA to set frequency. Input resistance is 250 $m{arrho}$                    |
|        | CM   | Common                     | Common terminal for the analog frequency setting signal and the FM(for monitoring)         |
| Output | Output AM-CM For monitoring Output one out of Output frequency, Output current, Output voltage |                            | Output one out of Output frequency, Output current, Output voltage and DC voltage.         |
|        |  |                            | Factory default set is to Output frequency.  |
|        |  |                            | Maximum output voltage = 0 to 12V, output current = 10mA                                   |
|        | 330A, 30C  | Multi-function relay and   | To interrupt the output when the protection function activates                             |
|        | 30B  | Open collector output      | or output multi-function signal.   |
|        | MO-EXTG  | Terminal                   | Multi-function relay terminal: Max. AC250V/1A, DC30V/1A                                    |
|        |  |                            | Open collector output terminal: Max. DC24V 50mA  |

## Keypad

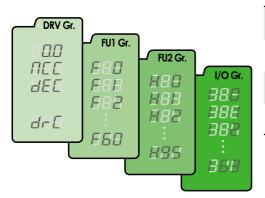

#### ■ Parameter group

There are 4 parameter groups to set parameters properly for the operation.

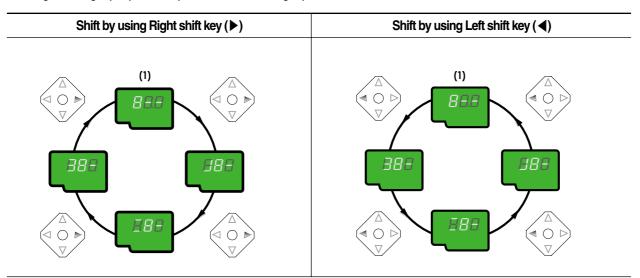

| Group              | Description  |
|--------------------|--|
| Drive group        | Basic parameters such as Command frequency, Accel/Decel time, etc.                                 |
| Function 1 group   | Basic functional parameters such as Max. frequency, Torque boost, etc.                             |
| Function 2 group   | Application parameters such as Frequency jump, Max./Min. of limit of frequency, etc.               |
| Input/Output group | Parameters to construct the sequence such as Multi-function terminal setting, Auto operation, etc. |

#### ■ Parameter group navigation

| Drive group        | Basic operation parameters such as Command frequency,       |
|--------------------|---|
|                    | Accel/Decel time, etc.                                      |
| Function 1 group   | Basic functional parameters for adjusting Output frequency, |
|                    | Voltage, etc.   |
| Function 2 group   | Application parameters of PID operation, The 2nd motor      |
|                    | setting, etc.   |
| Input/Output group | Parameters to construct the sequence such as Multi-function |
|                    | terminal setting, etc                                       |

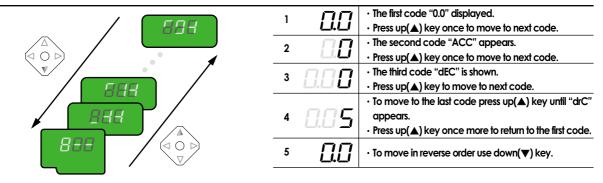

#### • Shifting between groups is possible only in the first code of each group.

(1) The value of the Command frequency will be displayed in the first code of the Drive group. It will show the value set by the operator. The factory set value is 0.0.

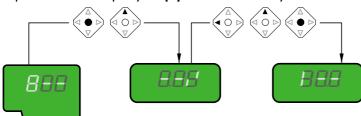

#### ■ Parameter navigation in Drive group

#### ■ Procedure to set command frequency in Drive group

To input new command frequency 30.05[Hz] from 0.0 set in the factory

| _ |          |  |
|---|----------|--|
| 1 |          | • The first code "0.0" displayed.                              |
|   | <u> </u> | · Press pro/ent(•) key.  |
| 2 | ,        | The digit of the first decimal place can be changed.           |
|   |          | · Press right (▶) key.   |
| 3 |          | The digit of the second decimal place can be changed.          |
|   |          | <ul> <li>Press up(▲) key until the digit becomes 5.</li> </ul> |
| 4 | 0.05     | • Press leff(◀) key.   |
|   | ППП      | • The left digit can be set.                                   |
|   |          | · Press left(◀) key.   |
| 6 | 0.05     | • Press leff(◀) key.   |
| 7 |          | Though 00.0 is displayed, the actual value remains at 0.05.    |
|   |          | · Make 3 by pressing up(▲) key.                                |
|   |          | · Press pro/ent(●) key.  |
| 8 | 30.0     | · 30.0 is flickering.  |
|   |          | · Press pro/ent( • ) key to stop the flickering.               |
| 9 | 30.0     | Command frequency 30.0 is stored.                              |

Note: (1) The LCD on the keypad of Drive iC5 displays only 3 digits.

Use the shift keys (◀ ▶) to monitor and set the parameters.

(2) To cancel the parameter setting press the shift keys

( $\blacktriangleleft$  or  $\blacktriangleright$ ) while 30.0 is flickering in the procedure no. 8.

**Warning:**If protection function activates due to error/fault in the inverter, corresponding alarm is displayed on the keypad as shown below.

Correct the error/fault before restarting or it may decrease the inverter's life expectancy.

| Display | Fault/Error                  | Description   |
|---------|------------------------------|---|
| 888     | Overcurrent                  | Output current has been greater than 200% of the rated current. The inverter output is interrupted.   |
| 888     | Ground fault                 | Ground fault has been occurred at the load side of the inverter. The inverter output is interrupted.  |
| 888     | Inverter overload            | Output current greater than 150% of the rated current has been flowed over 1 min.<br>The inverter output is interrupted.  |
| 888     | Overload trip                | Output current has been greater than the set value (F57) of the rated current.  The inverter output is interrupted.   |
| 888     | Coolingpin overheat          | Cooling pin has been overheated due to high ambient temperature.  The inverter output is interrupted.   |
| 888     | DC link condenser overload   | If the DC condenser of Inverter is in need of replacement the inverter output is interrupted.   |
| 888     | Output phase loss            | One or more of output line U, V and W lost.  The inverter output is interrupted.  |
| 888     | Overvoltage                  | The inverter main voltage has been risen above the permissible limit 400V.  Check if deceleration time has been set too short or line input voltage is too high.  |
| 888     | Undervoltage                 | The inverter output is interrupted.   |
| 888     | Electronic thermal           | The inverter output is interrupted according to the set time-inverse curve to prevent the overtemperature of the motor due to overloads.  |
| 888     | Parameter store error        | Error has been occurred on the storing of the changed parameters.  It is displayed when power is on.  |
| 888     | Hardware error               | It is displayed in case of software error.  It is not possible to reset by STOP/RST key on the keypad or reset terminals.  Open the inverter power and make sure the keypad power is off and close the power again.         |
| 888     | Communication error          | Communication error between controller and keypad.  It is not possible to reset by STOP/RST key on the keypad or reset terminals.  Open the inverter power and make sure the keypad power is off and close the power again. |
| 888     | Coolingfan error             | Error has been occurred on the coolingfan.  |
| 858     | Output instant interrupting  | The inverter output is interrupted in the case that BX terminal is ON.  Warning: To restart the drive make BX terminal OFF during the FX /RX is ON.   |
| 888     | A contact fault signal input | If 120/21/22/23/24 set to 18 is ON, the inverter output is interrupted.   |
| 888     | B contact fault signal input | If I20/21/22/23/24 set to 19 is ON, the inverter output is interrupted.   |
| 888     | Frequency command loss       | If signal input is failed for the driving by using analog input or option(RS485), try to drive according to the setting at I62.   |

| Parameter store error HEE Output instant interrupting EBB Communication error | Refer to LS or distributors  |  |

### Warning:

Carefully read the instruction for installation and wiring of inverters and relevant devices. Normal operation is impossible in case of the improper system design and wiring. These can shorten the life of the inverter and damage it at the worst.

## INDUCTORS FOR VARIABLE SPEED DRIVES

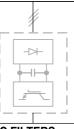

The inductors manufactured with special magneticcores are advisable for location: BETWEEN MAINS AND VARIABLE SPEED DRIVE, in order to protect the equipment from overvoltages, voltage surges and also to limit the line current and the harmonics generated by VSD. BETWEEN VARIBLE SPEED DRIVE AND MOTOR, to absorb the voltage peaks in the motor terminals, when the connection cables are long or there are more than one motor in parallel, for having a better efficiency and to eliminate the humming noise of the motor.

The family of filters manufactured by LIFASA has been specially developed and approved for its application with variable speed drives, to assure the compliance of the EMC (Electro Magnetic Compatibility) and the LV safety European Directives, in both industrial and domestic environments.

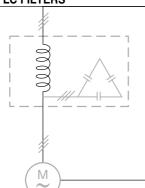

VARIABLE SPEED DRIVES

- Powers from 0.37 to 375 kW
- Sngle/three phase voltages 220/230 Vac
- Three phase voltages 380/460 Vac
- Sensorless vector control, V/F closed loop
- Removable console with copy function
- RS485 communication facilities as standard
- Autotuning
- Special parameters for special applications

**OUTPUT LC FILTERS** 

The commutation of the IGBT's at high frequency (PWM) provokes an output voltage with peaks up to 1300 V The LC filter - low pass - reduce the dV/dt converting the voltage in a sinus waveform, eliminating all the isolation problems in the motor and the emission of interference from the cables.

#### \* Filter for use of LS Inverters:

Vector Motor Control Ib'erica (VMC)

### Leading Innovation, Creating Tomorrow

- · For your safety, please read user's manual thoroughly before operating.
- Contact the nearest authorized service facility for examination, repair, or adjustment.
- Please contact qualified service technician when you need maintenance. Do not disassemble or repair by yourself!
- Any maintenance and inspection shall be performed by the personnel having expertise concerned.
