

Anaren Integrated Radio (AIR)

Low-power RF modules, firmware & development tools that make it easy to 'go wireless'

BoosterPack Series

The A2541R24A-ADB1 B-SMART BoosterPack kit is a development tool designed for use with the TI MSP430™ Value Line, TIVA-C, C2000 and other LaunchPad kits. The kit eases development of products that wirelessly communicate with devices incorporating *Bluetooth*® SMART technology per the *Bluetooth* 4.0 core specification*. The BoosterPack features an A2541R24A20 AIR module (based on TI's CC2541 low-power SoC) and is pre-loaded with Em-Ware firmware from Emmoco (based on TI's BLE-Stack).

A2541R24A-ADB1

Features

Kit:

- Includes one A2541R24A AIR Module BoosterPack, for connection to TI's MSP430, TIVA-C, C2000, and other LaunchPad development tools (not included)
- Each BoosterPack includes indicator LEDs, current monitoring circuitry, and provision for an on-board MSP430 Value Line microprocessor
- Includes B-SMART breakout cable for easy connection to a wide variety of processors

AIR Module:

- Incorporates TI's CC2541 SoC
- Tiny 11x19x2.5 mm footprint
- Pre-certified to FCC/IC and ETSI compliant
- Low power consumption

Firmware:

- Comes with Emmoco firmware (based on TI BLE Stack), designed for easy implementation of embedded-mobile-connectivity. Emmoco software and tools enable easy communication between an embedded device and *Bluetooth* SMART Ready phones and tablets
- Emmoco's Em-Builder tools and Schema concept generate code that makes sharing data between embedded and mobile devices easy

Benefits

- Provides "out of the box" wireless connectivity for easier development of applications based on the *Bluetooth* SMART standard
- Includes Emmoco firmware solution (based on TI's BLE-Stack), which compresses time to market by greatly reducing the development time
- Provides an excellent learning/development tool for all levels of *Bluetooth* SMART expertise— as well as a clear, easy-to-understand migration path from development to production
- Part of the *AIR Support—for Bluetooth* SMART, a total solution from Anaren that includes development tools, firmware, applications support, and more

Applications

Industrial controls and monitoring, remote controls, home/building automation, lighting systems, low power wireless sensor networks, and consumer electronics, sports monitoring, health & wellness, among many others

Applications are written in an easy-to-use schema format, and then pushed to a handheld device which interacts with the BoosterPack

The A2541R24A-ADB1 BoosterPack snaps onto the TI LaunchPad (sold separately) or connects to other processors via the included cable.

Anaren Integrated Radio (AIR)

Low-power RF modules, firmware & development tools that make it easy to 'go wireless'

Module family overview

General:

- 2.4-GHz RF transceiver incorporating *Bluetooth* SMART technology per the *Bluetooth* 4.0 core specification
- Excellent receiver sensitivity and robustness to interference (-89/-94dBm typical in BLE LGM/HGM mode with <0.1% BER)
- Wide input voltage range (2.0V – 3.6V)
- Features TI TPS62730 step-down converter for optimal power usage
- Features 32.768kHz crystal for enabling ultra-low power sleep timer
- Choice of integral antenna or U.FL connector
- 100% RF tested in production
- Module weight approximately 0.7 grams

Current Consumption: (Typ @ TC = 25°C, VDD = 3.0V)

- Active mode RX (CPU Idle): 14 mA
- Active mode TX (CPU Idle): 13 mA @0dBm, with 3 low power/sleep modes from 0.5uA to 270 uA

Microcontroller:

- High-performance and low-power 8051 Microcontroller core with code prefetch
- 256KB in-system programmable flash and 8KB RAM with retention in all power modes

Firmware:

- Preloaded with Emmoco firmware featuring *Bluetooth* SMART technology, designed for easy implementation of embedded-mobile-connectivity

Layout information

BoosterPack features shown below; see User's Manual for more information.

- | | | | |
|---|---------------------------------|---|--------------------------|
| A | AIR Radio Module | G | Administrative UART |
| B | External MCU connection | H | LEDs |
| C | Launchpad configuration jumpers | I | Control switches |
| D | SoC reset switch | J | Switch |
| E | MSP430 MCU provision | K | Voltage regulator bypass |
