#### Description

The SFD1200-12BG is a 1200-watt, DC-input front-end which has a main 12 VDC output for datacom, distributed power, and server applications, and provides a 3.3 VDC standby output. Its compact size enables mounting in both 1U and 2U height racks. High efficiencies, advanced thermal management techniques, and an internal fan increase reliability over a broad range of operating conditions. Internal ORing FETs facilitate use in hot-swap, redundant configurations.

Status is provided with front panel LEDs, logic signals, and via an I<sup>2</sup>C management interface bus. In addition, the I<sup>2</sup>C bus can supply status information about the power supply including output current and voltage.

The SFD1200-12G meets international safety requirements for ITE and is CE marked to the Low Voltage Directive (LVD).
