

**3-PIN MICROPROCESSOR RESET CIRCUITS****AZ809/AZ810****General Description**

The AZ809/810 microprocessor supervisory circuits can be used to monitor the power supplies in microprocessor and digital systems. They provide a reset to the microprocessor in power-up, power-down and brown-out conditions. The function of the AZ809/810 is to monitor the  $V_{CC}$  supply voltage, and assert a reset signal whenever this voltage declines below the factory-programmed reset threshold. The reset signal remains asserted for 240ms after  $V_{CC}$  rises above the threshold. The AZ809 has an active-low RESET output, while the AZ810 has an active-high RESET output. Seven standard reset voltage options are available, suitable for monitoring 3.0V, 3.3V and 5.0V supply voltages. With a typical supply current of only 8 $\mu$ A when  $V_{CC}$  is 3.3V, the AZ809/810 are ideal for use in portable equipment.

These ICs are available in SOT-23 package.

**Features**

- Precise Monitoring of 3.0V, 3.3V and 5.0V Supply Voltages
- Improved Maxim MAX809/MAX810 Replacement
- 140ms Min. Reset Pulse Width
- Active-low Reset Output (AZ809)
- Active-high Reset Output (AZ810)
- No External Components
- Specified Over Full Temperature Range: -40 to 105°C

**Applications**

- Embedded Controllers
- Battery Operated Systems
- Intelligent Instruments
- Wireless Communication Systems
- PDAs and Handheld Equipment

Figure 1. Package Type of AZ809/810

**Pin Configuration**

Figure 2. Pin Configuration of AZ809/810 (Top View)

**Pin Description**

Pin Number		Pin Name	Function
AZ809	AZ810		
1	1	GND	Ground pin
2		$\overline{\text{RESET}}$	$\overline{\text{RESET}}$ is asserted LOW if $V_{CC}$ falls below the reset threshold and remains LOW for the 240ms typical reset timeout period (140ms minimum) after $V_{CC}$ exceeds the threshold
	2	RESET	RESET is asserted HIGH if $V_{CC}$ falls below the reset threshold
3	3	$V_{CC}$	Power supply input voltage (3.0V, 3.3V, 5.0V)

BCD Semiconductor's Pb-free products, as designated with "E1" suffix in the part number, are RoHS compliant. Products with "G1" suffix are available in green packages.

**Absolute Maximum Ratings (Note 1)**

Parameter	Symbol	Value	Unit
Supply Voltage	$V_{CC}$	-0.3 to 6	V
$\overline{\text{RESET}}$ , RESET		-0.3 to $V_{CC}+0.3$	V
Input Current, $V_{CC}$ Pin		20	mA
Output Current, $\overline{\text{RESET}}$ , RESET Pin		20	mA
Rate of Rise, $V_{CC}$		100	V/ $\mu$ s
Continuous Power Dissipation		320	mW
Junction Temperature	$T_J$	125	°C
Storage Temperature	$T_{STG}$	-65 to 150	°C
Lead Temperature (Soldering, 10sec)	$T_{LEAD}$	300	°C

Note 1: Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "Recommended Operating Conditions" is not implied. Exposure to "Absolute Maximum Ratings" for extended periods may affect device reliability.

**Operating Diagram**

Note: The reset signal is asserted LOW for the AZ809 and HIGH for the AZ810 when the  $V_{CC}$  signal falls below the threshold trip voltage and remains asserted for 240ms typical after the  $V_{CC}$  has risen above the threshold.
