

## **SMT inductors**

SIMID series, SIMID 0805-F

**Series/Type:**            **B82498F**

**Date:**                    **October 2012**

© EPCOS AG 2015. Reproduction, publication and dissemination of this publication, enclosures hereto and the information contained therein without EPCOS' prior express consent is prohibited.

EPCOS AG is a TDK Group Company.

### SMD

**Size 0805 (EIA) and/or 2012 (IEC)**

**Rated inductance 2.7 ... 6800 nH**

**Rated current 80 ... 1000 mA**

#### Construction

- Cubic coil with ceramic or ferrite core
- Epoxy-molded flat top for vacuum pickup
- Winding ends welded to terminals

#### Features

- High resonance frequency
- Close inductance tolerance
- Suitable for lead-free reflow soldering
- RoHS-compatible

#### Applications

Resonant circuits, impedance matching for

- Antenna amplifiers
- Multimedia
- Wireless communication systems
- Car access systems
- TPMS (Tire Pressure Monitoring System)
- GPS (Global Positioning System)

#### Terminals

- Standard version:
  - Base material Al<sub>2</sub>O<sub>3</sub> ceramic and ferrite
  - Thick-film coating of Ag/Pd/Pt
- Gold-plated terminals:
  - Base material Al<sub>2</sub>O<sub>3</sub> ceramic
  - Layer composition W/Ni/Au
  - Electro-plated
  - Qualified to AEC-Q200
  - Suitable for lead-free reflow soldering as referenced in JEDEC J-STD 020D

#### Marking

- No marking on component
- Minimum data on reel:
  - Manufacturer, ordering code, L value, quantity, date of packing

#### Delivery mode and packing unit

- 8-mm blister tape, wound on 180-mm reel
- Packing unit: 3000 pcs./reel

Dimensions in mm

**SMD**
**Technical data and measuring conditions**

Rated inductance $L_R$	Measured with impedance analyzer Agilent E4991A at frequency $f_L$ , 0.1 V, +20 °C
Q factor $Q_{\min}$	Measured with impedance analyzer Agilent E4991A at frequency $f_Q$ , +20 °C
Rated temperature $T_R$	+105 °C
Rated current $I_R$	Maximum permissible DC with inductance decrease $\Delta L/L_0 \leq 10\%$ and temperature increase of $\leq 20$ K at rated temperature
Self-resonance frequency $f_{\text{res},\min}$	Measured with network analyzer Agilent E8362B, +20 °C
DC resistance $R_{\max}$	Measured at +20 °C
Solderability (lead-free)	Sn95.5Ag3.8Cu0.7: +(245 ±5) °C, (5 ±0.3) s Wetting of soldering area $\geq 90\%$ (based on IEC 60068-2-58)
Resistance to soldering heat	Standard version: +260 °C, 20 s Gold-plated terminals: +260 °C, 40 s (as referenced in JEDEC J-STD 020D)
Climatic category	55/125/56 (to IEC 60068-1)
Storage conditions	Mounted: -55 °C ... +125 °C Packaged: -25 °C ... +40 °C, $\leq 75\%$ RH
Weight	Approx. 10 mg

Higher currents possible at temperatures  $<T_R$  on request.

Sample kit for standard version available. Ordering code: B82498X001

For more information refer to chapter "Sample kits".

1) For gold-plated terminals the last digit has to be a "1". Example: B82498F3279K001

2) Replace the + by the code letter for the required inductance tolerance.

1) Replace the + by the code letter for the required inductance tolerance.

**SMD**

**Impedance |Z| vs. frequency f (ceramic core)**  
 measured with impedance analyzer  
 Agilent E4991A, typical values at +20 °C

**Impedance |Z| vs. frequency f (ferrite core)**  
 measured with impedance analyzer  
 Agilent E4991A, typical values at +20 °C

**Q factor versus frequency f (ceramic core)**  
 measured with impedance analyzer  
 Agilent E4991A, typical values at +20 °C

**Q factor versus frequency f (ferrite core)**  
 measured with impedance analyzer  
 Agilent E4991A, typical values at +20 °C

**SMD**

**Inductance L versus DC load current  $I_{DC}$**   
 measured with RF LCR meter  
 Agilent 4285A, typical values at +20 °C

**Current derating  $I_{op}/I_R$**   
 versus ambient temperature  $T_A$   
 (rated temperature  $T_R = +105$  °C)

## Cautions and warnings

- Please note the recommendations in our Inductors data book (latest edition) and in the data sheets.
  - Particular attention should be paid to the derating curves given there.
  - The soldering conditions should also be observed. Temperatures quoted in relation to wave soldering refer to the pin, not the housing.
- If the components are to be washed varnished it is necessary to check whether the washing varnish agent that is used has a negative effect on the wire insulation, any plastics that are used, or on glued joints. In particular, it is possible for washing varnish agent residues to have a negative effect in the long-term on wire insulation.

Washing processes may damage the product due to the possible static or cyclic mechanical loads (e.g. ultrasonic cleaning). They may cause cracks to develop on the product and its parts, which might lead to reduced reliability or lifetime.
- The following points must be observed if the components are potted in customer applications:
  - Many potting materials shrink as they harden. They therefore exert a pressure on the plastic housing or core. This pressure can have a deleterious effect on electrical properties, and in extreme cases can damage the core or plastic housing mechanically.
  - It is necessary to check whether the potting material used attacks or destroys the wire insulation, plastics or glue.
  - The effect of the potting material can change the high-frequency behaviour of the components.
- Ferrites are sensitive to direct impact. This can cause the core material to flake, or lead to breakage of the core.
- Even for customer-specific products, conclusive validation of the component in the circuit can only be carried out by the customer.

## Important notes

The following applies to all products named in this publication:

1. Some parts of this publication contain **statements about the suitability of our products for certain areas of application**. These statements are based on our knowledge of typical requirements that are often placed on our products in the areas of application concerned. We nevertheless expressly point out **that such statements cannot be regarded as binding statements about the suitability of our products for a particular customer application**. As a rule, EPCOS is either unfamiliar with individual customer applications or less familiar with them than the customers themselves. For these reasons, it is always ultimately incumbent on the customer to check and decide whether an EPCOS product with the properties described in the product specification is suitable for use in a particular customer application.
2. We also point out that **in individual cases, a malfunction of electronic components or failure before the end of their usual service life cannot be completely ruled out in the current state of the art, even if they are operated as specified**. In customer applications requiring a very high level of operational safety and especially in customer applications in which the malfunction or failure of an electronic component could endanger human life or health (e.g. in accident prevention or life-saving systems), it must therefore be ensured by means of suitable design of the customer application or other action taken by the customer (e.g. installation of protective circuitry or redundancy) that no injury or damage is sustained by third parties in the event of malfunction or failure of an electronic component.
3. **The warnings, cautions and product-specific notes must be observed.**
4. In order to satisfy certain technical requirements, **some of the products described in this publication may contain substances subject to restrictions in certain jurisdictions (e.g. because they are classed as hazardous)**. Useful information on this will be found in our Material Data Sheets on the Internet ([www.epcos.com/material](http://www.epcos.com/material)). Should you have any more detailed questions, please contact our sales offices.
5. We constantly strive to improve our products. Consequently, **the products described in this publication may change from time to time**. The same is true of the corresponding product specifications. Please check therefore to what extent product descriptions and specifications contained in this publication are still applicable before or when you place an order.

We also **reserve the right to discontinue production and delivery of products**. Consequently, we cannot guarantee that all products named in this publication will always be available. The aforementioned does not apply in the case of individual agreements deviating from the foregoing for customer-specific products.

6. Unless otherwise agreed in individual contracts, **all orders are subject to the current version of the “General Terms of Delivery for Products and Services in the Electrical Industry” published by the German Electrical and Electronics Industry Association (ZVEI)**.
7. The trade names EPCOS, BAOKE, Alu-X, CeraDiode, CeraLink, CSMP, CSSP, CTVS, DeltaCap, DigiSiMic, DSSP, FilterCap, FormFit, MiniBlue, MiniCell, MKD, MKK, MLSC, MotorCap, PCC, PhaseCap, PhaseCube, PhaseMod, PhiCap, SIFERRIT, SIFI, SIKOREL, SilverCap, SIMDAD, SiMic, SIMID, SineFormer, SIOV, SIP5D, SIP5K, ThermoFuse, WindCap are **trademarks registered or pending** in Europe and in other countries. Further information will be found on the Internet at [www.epcos.com/trademarks](http://www.epcos.com/trademarks).
