EPCOS AG is a TDK Group Company.

## Inductors

RF chokes, BC+ series

B78108E, B78148E

### BC chokes

Rated inductance 0.1  $\mu\text{H}$  ... 100  $\mu\text{H}$

Rated current 640 mA .. 7300 mA

### Construction

- Ferrite drum core
- Winding: enamel copper wire
- Flame-retardant lacquer coating

### Features

- Very high rated current
- High saturation behaviour
- High self-resonance frequency
- Suitable for wave soldering
- RoHS-compatible

### Applications

- DC-DC converter
- Filtering of supply voltage & battery charger (EMI)
- RF blocking and filtering
- Decoupling and interference suppression
- For telecommunications, LED and energy-saving lamps, solar LED lamps, entertainment electronics

### Terminals

- Radially bent to 5mm lead spacing (B78148E)
- Central axial leads (B78108E)
- Base material Cu
- Electroplated with nickel and pure tin

### Marking

- Inductance indicated by color bands in accordance with IEC 60062

### Delivery mode and packing units

- Taped, Ammo and reel packing
- Packing units:

	Ammo (pcs./pack.)	Reel (pcs./reel)
Axial	2500	5000
Radial	2500	2000

B78108E

B78148E

## Inductors

RF chokes, BC+ series

B78108E, B78148E

### Dimensional drawings

**B78108E (axial leads, taped)** Dimensions in mm

IND0429-B-E **Minimum lead spacing 12.5 mm**

**B78148E (central radial leads, taped)**

Dimensions in mm

IND1244-N-E

IND0629-B

### Packing

Dimensions in mm

n (mm): axial  $72 + 1$ , radial  $42 + 1$   
w (mm): axial  $84$  max., radial  $54$  max.

L x W x H (max. mm):  
axial:  $275 \times 80 \times 140$ , radial:  $340 \times 50 \times 210$

**Inductors**
**RF chokes, BC+ series**
**B78108E, B78148E**
**Technical data and measuring conditions**

Rated inductance $L_R$	Measured with LCR meter Agilent 4284A or impedance analyzer Agilent 4294A Measuring current: 1 mA Measuring temperature: +20 °C
Q factor $Q_{\min}$	Measured with impedance analyzer Agilent 4294A, +20 °C
Rated temperature $T_R$	+40 °C
Rated current $I_R$	Maximum permissible DC current based on rated temperature of +40 °C and component temperature of max. +125 °C
Saturation current $I_{\text{sat}}$	Max. permissible DC with inductance decrease $\Delta L/L_0$ of approx. 10%, at +20 °C (Agilent 4284A and 42841A)
DC resistance $R_{\max}$	Measured at +20 °C
Resonance frequency $f_{\text{res},\min}$	Measured with Agilent 4294A or 8753ES, +20 °C
Solderability (lead-free)	Sn95.5Ag3.8Cu0.7: (+245 ±5) °C, (3 ±0.3) s Wetting of soldering area: ≥ 90% (to IEC 60068-2-20, test Ta)
Resistance to soldering heat	(+260 ±5)°C, 10 s (to IEC 60068-2-20, test Tb)
Tensile strength of leads	≥ 20 N (to IEC 60068-2-21, test Ua)
Climatic category	55/125/56 (to IEC 60068-1)
Storage conditions	Mounted: -55 °C ... +125 °C Packaged: -25 °C ... +40 °C, ≤ 75% RH
Weight	Approx. 0.38 g

**Mounting information:**

When bending the leads, take care that the start-of-winding areas at the face ends (protected by glue and lacquer) are not subjected to any mechanical stress.

**Inductors**
**RF chokes, BC+ series**
**B78108E, B78148E**

1) Replace the \* by code number "0" for axial taping or by "4" for radial taping.

2) For Ammo pack the last digit has to be a "9". Example: B78108E1223K009

## Inductors

RF chokes, BC+ series

B78108E, B78148E

### Impedance $|Z|$ versus frequency $f$

measured with impedance analyzer Agilent 4294A or S-parameter network analyzer Agilent 8753ES, typical values at +20 °C

### Inductance $L$ versus DC load current $I_{DC}$

measured with LCR meter Agilent 4284A and 42841A, typical values at +20 °C

### Q factor versus frequency $f$

measured with impedance analyzer Agilent 4294A, typical values at +20 °C

### Current derating $I_{op}/I_R$ versus ambient temperature $T_A$

(rated temperature  $T_R = +40$  °C)

### Cautions and warnings

- Please note the recommendations in our Inductors data book (latest edition) and in the data sheets.
  - Particular attention should be paid to the derating curves given there.
  - The soldering conditions should also be observed. Temperatures quoted in relation to wave soldering refer to the pin, not the housing.
- If the components are to be washed varnished it is necessary to check whether the washing varnish agent that is used has a negative effect on the wire insulation, any plastics that are used, or on glued joints. In particular, it is possible for washing varnish agent residues to have a negative effect in the long-term on wire insulation. Washing processes may damage the product due to the possible static or cyclic mechanical loads (e.g. ultrasonic cleaning). They may cause cracks to develop on the product and its parts, which might lead to reduced reliability or lifetime.
- The following points must be observed if the components are potted in customer applications:
  - Many potting materials shrink as they harden. They therefore exert a pressure on the plastic housing or core. This pressure can have a deleterious effect on electrical properties, and in extreme cases can damage the core or plastic housing mechanically.
  - It is necessary to check whether the potting material used attacks or destroys the wire insulation, plastics or glue.
  - The effect of the potting material can change the high-frequency behaviour of the components.
- Ferrites are sensitive to direct impact. This can cause the core material to flake, or lead to breakage of the core.
- Even for customer-specific products, conclusive validation of the component in the circuit can only be carried out by the customer.

### Display of ordering codes for EPCOS products

The ordering code for one and the same product can be represented differently in data sheets, data books, other publications and the website of EPCOS, or in order-related documents such as shipping notes, order confirmations and product labels. **The varying representations of the ordering codes are due to different processes employed and do not affect the specifications of the respective products.** Detailed information can be found on the Internet under [www.epcos.com/orderingcodes](http://www.epcos.com/orderingcodes).

## Important notes

The following applies to all products named in this publication:

1. Some parts of this publication contain **statements about the suitability of our products for certain areas of application**. These statements are based on our knowledge of typical requirements that are often placed on our products in the areas of application concerned. We nevertheless expressly point out **that such statements cannot be regarded as binding statements about the suitability of our products for a particular customer application**. As a rule, EPCOS is either unfamiliar with individual customer applications or less familiar with them than the customers themselves. For these reasons, it is always ultimately incumbent on the customer to check and decide whether an EPCOS product with the properties described in the product specification is suitable for use in a particular customer application.
2. We also point out that **in individual cases, a malfunction of electronic components or failure before the end of their usual service life cannot be completely ruled out in the current state of the art, even if they are operated as specified**. In customer applications requiring a very high level of operational safety and especially in customer applications in which the malfunction or failure of an electronic component could endanger human life or health (e.g. in accident prevention or life-saving systems), it must therefore be ensured by means of suitable design of the customer application or other action taken by the customer (e.g. installation of protective circuitry or redundancy) that no injury or damage is sustained by third parties in the event of malfunction or failure of an electronic component.
3. **The warnings, cautions and product-specific notes must be observed.**
4. In order to satisfy certain technical requirements, **some of the products described in this publication may contain substances subject to restrictions in certain jurisdictions (e.g. because they are classed as hazardous)**. Useful information on this will be found in our Material Data Sheets on the Internet ([www.epcos.com/material](http://www.epcos.com/material)). Should you have any more detailed questions, please contact our sales offices.
5. We constantly strive to improve our products. Consequently, **the products described in this publication may change from time to time**. The same is true of the corresponding product specifications. Please check therefore to what extent product descriptions and specifications contained in this publication are still applicable before or when you place an order. We also **reserve the right to discontinue production and delivery of products**. Consequently, we cannot guarantee that all products named in this publication will always be available. The aforementioned does not apply in the case of individual agreements deviating from the foregoing for customer-specific products.
6. Unless otherwise agreed in individual contracts, **all orders are subject to the current version of the "General Terms of Delivery for Products and Services in the Electrical Industry" published by the German Electrical and Electronics Industry Association (ZVEI)**.
7. The trade names EPCOS, Alu-X, CeraDiode, CeraLink, CeraPad, CeraPlas, CSMP, CSSP, CTVS, DeltaCap, DigiSiMic, DSSP, ExoCore, FilterCap, FormFit, LeaXield, MiniBlue, MiniCell, MKD, MKK, MotorCap, PCC, PhaseCap, PhaseCube, PhaseMod, PhiCap, PQSine, SIFERRIT, SIFI, SIKOREL, SilverCap, SIMDAD, SiMic, SIMID, SineFormer, SIOV, SIP5D, SIP5K, TFAP, ThermoFuse, WindCap are **trademarks registered or pending** in Europe and in other countries. Further information will be found on the Internet at [www.epcos.com/trademarks](http://www.epcos.com/trademarks).
