1.0 GENERAL

Scope

This specification covers the insulation piercing Quickie™ Connector designed for printed wiring board-to-flat cable (round conductor) interconnection in low power applications. In all applications the mated system (header to receptacle) plating should be gold to gold or tin to tin. The specification is composed of the following sections.

3.0 REQUIREMENTS

3.1 Qualification

Connectors furnished under this specification shall be products capable of meeting the qualification test requirements specified herein.

3.2 Material

The material for each part shall be as specified herein, or equivalent. Substitute material shall meet the performance requirements of this specification.

3.2.1 Contact. Both the header and receptacle contact shall be full-hard phosphor bronze in accordance with QQ-B-750, Composition A.

3.2.2 Latch. The standard Quickie shall have a plastic molded-in latch.

	TYPE	PRODUCT SPECIFICATION		NUMBER	BUS-12-082			
	TITLE	Quickie™ Connector System			PAGE	3 of 20	REVISION	F
				AUTHORIZED BY	M.Barrios		DATE	31 Jul 06
				CLASSIFICATION	UNRESTRICTED			

3.2.3 **Plastic Parts.** Except as subsequently specified, all molded plastic parts of the receptacle connector and the mating header shall be filled polyester in accordance with MIL-M-24519, Type GPT-30F. Except as noted, all plastic material shall be rated flame retardant 94V-0 in accordance with UL-94.

3.2.3.1 **Header Locking Latches (Optional).** The latches shall be polyester in accordance with MIL-M-24519, Type PT-F.

3.2.3.2 **Strain Relief (Optional).** The strain relief shall be unfilled thermoplastic material.

3.2.3.3 **Keys (Optional).** The keys shall be unfilled Type 6-6 Nylon; the material shall be rated flame retardant 94V-2 in accordance with UL-94.

3.3 Finish

The finish for each part shall be as specified herein. Substitute finishes shall meet the performance requirements of this specification.

3.3.1 Both the header and receptacle contacts shall be plated with either gold per MIL-45204B, GXT, or with tin-lead. Nickel shall be plated per QQ-N-290, Class 2.

3.4 Design and Construction

	TYPE	NUMBER	
	PRODUCT SPECIFICATION	BUS-12-082	
TITLE Quickie™ Connector System	PAGE	REVISION	
	6 of 20	F	
	AUTHORIZED BY	DATE	
M.Barrios	31 Jul 06		
CLASSIFICATION		UNRESTRICTED	

The connector system shall be of two-piece design, consisting of: a molded, straight or right-angle, shielded header having .64/0.025 diameter or .64/0.025 square header contacts arranged for printed wiring board termination on a 2.54/0.100 square grid; and a multi-piece receptacle connector having self-stripping contact terminations for flat, flexible, round conductor cable on a 1.27/0.050 inch center and either one single-ended or two single-ended cantilever members for interfacing with the header contact.

NOTE: While the receptacle connector will mate with any .64/0.025 diameter or .64/0.025 square header contacts on an appropriate grid, performance of such a combination must be determined by actual test. Minimum pin length is 4.32/.170", maximum pin length is 6.35/.250". Recommended pin length is 5.84/.230".

3.4.1 Installation.

3.4.1.1 **Header.** The header shall mount on single- or double-sided or multi-layered printed wiring board of any thickness to $\pm .08/.003$ inch (Size 4) having $.89/0.035 \pm 0.003$ diameter holes (Round Pin) or $1.02/.040 \pm .08/.003$ diameter holes (square pin) on a 2.54/0.0100 square grid. The termination layout shall be in accordance with the printed wiring requirements of MIL-STD-275 and MIL-P-55110.

3.4.1.2 **Receptacle.** The receptacle shall simultaneously terminate up to 60 wires size AWG #28 (stranded) or AWG #30 (solid) on 1.27/0.050 inch centers without pre-stripping the PVC (polyvinylchloride) cable insulation. The cable shall conform to the requirements of specifications BUS-12-001.

3.4.2 Latching Mechanism. An optional latching mechanism shall be available for locking the plug into the receptacle to withstand service conditions without disconnecting.

3.4.3 Strain Relief. An optional strain relief shall be available to protect the receptacle terminations against pull and flexing forces.

3.4.4 Polarizing Feature. An optional molded-in polarizing feature shall be available to insure correct orientation of the receptacle connector and its mating header.

	PRODUCT SPECIFICATION	BUS-12-082	
TITLE Quickie™ Connector System	PAGE	7 of 20	REVISION F
	AUTHORIZED BY M.Barrios	DATE 31 Jul 06	
	CLASSIFICATION UNRESTRICTED		

- 3.4.5 Keying. An optional key(s) shall be available for installation in individual positions in the receptacle connector to permit selective identification or programming.
- 3.4.6 Mating. The connector shall be capable of mating and unmating by hand without the use of special tools within the specified temperature range.
- 3.4.7 Workmanship. Connectors shall be uniform in quality and shall be free from burrs, scratches, cracks, voids, chips, blisters, pin holes, sharp edges, and other defects that will adversely affect life or serviceability.
- 3.4.8 Interchangeability. Any header shall be capable of mating with any receptacle of the same contact population without degradation in performance.

3.5 Electrical Characteristics

- 3.5.1 Current Rating. The maximum current rating of the connector shall be 1.0 ampere DC.
- 3.5.2 Contact Resistance. The contact resistance shall not exceed 10 milliohms (15 milliohms after exposure to the environments described in paragraphs 3.6.5 and 3.7.1 to 3.7.7) when measured in accordance with MIL-STD-202, Method 307. The following details shall apply:
 - (a) Method of Connection - attach current and voltage leads as shown in Figure 1.
 - (b) Test Current - 1.0 ampere DC.
- 3.5.3 Low Level Circuit Resistance. The low level circuit resistance shall not exceed 10 milliohms (15 milliohms after exposure to the environments described in paragraphs 3.6.5 and 3.7.1 to 3.7.7) when measured in accordance with MIL-STD-1344, Method 3002. The following details shall apply.
 - (a) Method of Connection - see Figure 2
 - (b) Test Current - 1 milliampere DC
 - (c) Maximum Open Circuit Voltage-20 millivolts DC

3.5.4 Insulation Resistance. The insulation resistance of mated connectors shall be not less than 50,000 megohms (20,000 megohms after exposure to the humidity environment described in paragraph 3.7.1) when measured in accordance with MIL-STD-202, Method 302. The following details shall apply:

- (a) Test Condition - B (500 volts DC)
- (b) Special Preparation* - the header and receptacle shall not be terminated.
- (c) Points of Measurement - between adjacent contact positions.

- NOTES:**
1. Current connected to first and last conductor; adjacent intermediate leads shorted.
 2. Berg Stik used to short alternate terminals in complementary pattern to cable conductors.
 3. Voltmeter lead piercing cable insulation.

- 3.5.5 Dielectric Withstanding Voltage. There shall be no evidence of arc-over, insulation breakdown, or excessive leakage current (> 1 milliampere) when the mated connectors are tested in accordance with MIL-STD-202, Method 301. The following details shall apply:
- (a) Test Potential - 1,000 volts RMS, 60 Hz at sea-level pressure 450 volts RMS, 60 Hz at 50,000 feet simulated altitude.
 - (b) Test Duration - 60 seconds
 - (c) Special Preparation* - the header and receptacle shall not be terminated.
 - (d) Points of Measurement - between adjacent contact positions.

3.6 Mechanical Characteristics

- 3.6.1 Cable Retention. The strain relief on the receptacle shall withstand an evenly distributed force of 10 pounds per-inch-of-cable-width (.146 Newtons per-millimeter-of-cable-width) applied to the cable in a direction parallel to the contact axis.

- 3.6.2 Cable Flex Resistance**. With strain relief installed, the receptacle shall withstand 100 cycles of cable flexing. The following details shall apply:

- (a) Tension on Cable - 2 pounds per-inch-of-cable-width (0.029 Newtons per-millimeter-of-cable width)
- (b) Flex Angle - 140° as shown in Figure 3.

* The layout of land areas on printed wiring boards and the proximity of adjacent conductors at the cut end of flexible cables can affect this characteristic and, therefore, are necessarily excluded in its specification.

** Stranded wire only; solid conductors will not withstand flexing, whether or not a connector is installed.

- 3.6.3 Total Mating Force. The total force to mate the header and receptacle shall not exceed the values shown in Table I.

3.6.4 Individual Contact Separation Force. When measured using a gage configured as shown in Figure 4, the individual contact separation force shall be not less than 25 grams.

FIGURE 4 - SEPARATION FORCE GAGE

3.6.5 Durability. After 100 mating cycles of the header and receptacle, the individual contact separation force shall be not less than specified above (see paragraph 3.6.4) and the contact resistance shall not exceed 15 milliohms (see paragraph 3.5.2).

3.6.6 Contact to Housing Retention. The force required to dislodge the receptacle terminal from its housing cavity shall be 1 Lb. minimum prior to cable termination or assembly of strain reliefs.

3.7 Environmental Conditions

3.7.1 Humidity. Within 1 hour after exposure of the mated connector to a high humidity environment, the insulation resistance of an unterminated connector shall be not less than 20,000 megohms (see paragraph 3.5.4); the contact resistance of a terminated connector shall not exceed 15 milliohms (see paragraph 3.5.2). The test shall be in accordance with MIL-STD-202, Method 103; the following details shall apply:

- (a) Test Duration - 96 hours
- (b) Relative Humidity - 90% minimum
- (c) Temperature - 40°C

- 3.7.2 Thermal Shock. After exposure of the mated connector to alternate periods of extreme high and low temperature, there shall be no evidence of cracking or crazing of the insulator or other physical damage to the connector; the dielectric withstanding voltage of an unterminated connector shall be not less than 1,000 volts RMS, 60 Hz (see paragraph 3.5.5). The test shall be in accordance with MIL-STD-202, Method 107; the following details shall apply:
- (a) Test Condition - B (1 hour cycles)
 - (b) Temperature Range* - -65 to +105°C
- 3.7.3 High Temperature Life. After exposure of the mated connector to a high temperature operating environment, the insulation resistance of an unterminated connector shall be not less than 100,000 megohms (see paragraph 3.5.4); the contact resistance of a terminated connector shall not exceed 15 milliohms (see paragraph 3.5.2). The test shall be in accordance with MIL-STD-202, Method 108; the following details shall apply:
- (a) Test Chamber Temperature - 85°C
 - (b) Test Condition (Duration)- B (250 hours)
 - (c) Operating Conditions - 1.0 ampere DC current (rated) through all contacts of terminated connector; duty cycle: 45 minutes ON and 15 minutes OFF.
- 3.7.4 Shock. There shall be no evidence of physical or mechanical damage when the mated connectors are subjected to transient accelerations. During and after each shock, the contacts shall evidence no discontinuity greater than 1 microsecond. The test shall be in accordance with MIL-STD-202, Method 213. The following details shall apply:
- (a) Test Condition - I (100G, 6ms sawtooth)
 - (b) Number of Shocks - 3 shocks in each direction along three orthogonal axes (18 total)
 - (c) Mounting - see Figure 5

	TYPE	PRODUCT SPECIFICATION		NUMBER	BUS-12-082		
	TITLE	Quickie™ Connector System		PAGE	13 of 20	REVISION	F

				CLASSIFICATION	UNRESTRICTED		

3.7.5 Vibration. There shall be no evidence of physical or mechanical damage when the mated connectors are subjected to prolonged mechanical vibration; during the vibration along each axis, the contacts shall evidence no discontinuity greater than 1 microsecond. At the completion of the test, the individual contact separation force shall be not less than specified in paragraph 3.6.4 and the contact resistance shall not exceed 15 milliohms (see paragraph 3.5.2). The test shall be in accordance with MIL-STD-202, Method 204; the following details shall apply:

- (a) Test Condition - B ($\pm 15G$, 10 to 2,000 Hz)
- (b) Test Duration - 4 hours along each of three orthogonal axes (12 hours total)
- (c) Mounting - see Figure 5

* The high temperature limit for polyester is $+150^{\circ}C$; however, the PVC insulation of the cable restricts the assembly to $+105^{\circ}C$.

3.7.6 Hydrogen Sulfide (H_2S) Exposure. After exposure of the mated connectors to an H_2S atmosphere, the low level circuit resistance shall not exceed 15 milliohms (see paragraph 3.5.3). The following details shall apply:

- (a) Test Medium - solution of 120 grams of $Na_2S \cdot 9H_2O$ in 500 ml of distilled water, with 14 grams of K_2HPO_4 added immediately prior to test.
- (b) Test Temperature - $40^{\circ}C$
- (c) Test Duration - 48 hours in a sealed 9000 cc glass container.

3.7.7 Salt Spray. After exposure of the mated connectors to a salt fog atmosphere, the low level circuit resistance and contact resistance shall not exceed 15 milliohms (see paragraphs 3.5.3 and 3.5.2, respectively) when measured in that order. The test all be in accordance with MIL-STD-202, Method 101; the following details shall apply:

- (a) Salt Solution - 5 percent by weight
- (b) Test Condition - B (48 hours)

4.0 QUALITY ASSURANCE PROVISIONS

4.1 Equipment Calibration

All test equipment and inspection facilities used in the performance of any test shall be maintained in a calibration system in accordance with MIL-C-45662.

4.2 Inspection Conditions

Unless otherwise specified herein, all inspections shall be performed under the following ambient conditions.

- (a) Temperature - $25^{\circ}\text{C} \pm 5^{\circ}\text{C}$
- (b) Relative Humidity - 30 to 80%
- (c) Barometric Pressure - Local Ambient

4.3 Qualification Inspection

Qualification inspection shall be performed on sample units produced with equipment and procedures normally used in production.

- 4.3.1 Sample. Six (6) of the largest and three (3) of the smallest population connectors shall be subjected to the qualification inspection.
- 4.3.2 Preparation of Samples. The various test samples shall be configured and terminated as shown in Table II.
- 4.3.3 Test Sequence. The sample connectors shall be subjected to the inspections specified in Table III in the order shown.

Visual & Mechanical	1.0%	4.0%

4.5.1 Inspection Lot. An inspection lot shall consist of all connectors produced under essentially the same conditions and offered for inspection at one time.

4.5.2 Sampling Plan. Statistical sampling and inspection shall be in accordance with MIL-STD-105 for General Inspection, Level II. The acceptable quality level (AQL) shall be as specified in Table VI. Major and minor defects shall be as defined in MIL-STD-105.

4.5.3 Rejected Lots. Rejected lots shall be reworked to correct the defects or screened to remove defective units and re-submitted for inspection.

4.5.4 Disposition of Sample Units. Sample units that have been subjected to the acceptance inspection shall be considered deliverable on the contract or purchase order.
