3 Hardware Description

Please refer to section 3.2.2 for connector settings. Some VM800C jumpers must be set to work properly with your system.

3.1 VM800C board

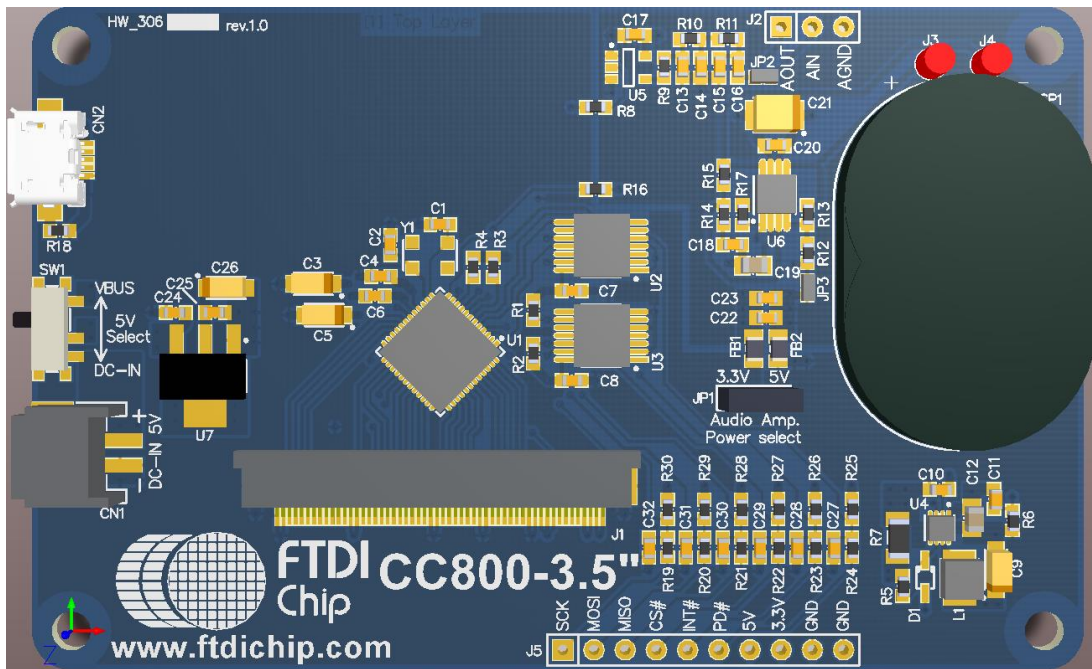

Figure 3-1 – VM800C board profile 3.5" display version

Figure 3-2 - VM800C board profile 4.3"/5" display version

The VM800C module is intended for direct use into existing applications that require a display. This module is suitable for interfacing with an external microcontroller that has a SPI Master channel.

The VM800C module PCB comes in 2 types, 3.5 inch as well as a 4.3/5 inch model. The difference between the 2 models is the flex cable receptacle of the LCD. The 3.5 inch LCD uses a 54 pin receptacle, whereas the 4.3/5 inch model uses a 40 pin receptacle.

The main functions of the VM800C are as follows:

- Micro USB, SPI connector or 2-pin connector for power supply
- 3.3V regulator : Takes 5V input and outputs 3.3V for on-board circuits
- LCD touch screen panel
- LCD backlight driver. On board back light driver has over voltage protection (OVP).

5.2 MPSSE Setup

To give a quick start with the VM800C development board, a Windows based Sample Application and demo applications are provided for users to experiment and experience the FT800 in the VM800C system. The following paragraphs provide a short description for development procedures.

MPSSE is a "multi purpose synchronous serial engine" interface available in some FTDI device (e.g. FT2232D, FT232H, FT2232H and FT4232H). This engine allows users to bridge from a USB port on a PC to an I²C or SPI interface. Sample code is available for driving the FT800 over this interface with a FT232H device that has been integrated into a cable. This device is available in the VA800A-SPI board, or C232HM-EDHSL-0(5V) cable or C232HM-DDHSL-0(3.3V) cable.

VA800A-SPI is a MPSSE module accessory which can connect to the VM800C modules directly. Detailed information of VA800A-SPI can be found at:

<http://www.ftdichip.com/VM800B.htm>.

More information about MPSSE cables may be found at:

http://www.ftdichip.com/Support/Documents/DataSheets/Cables/DS_C232HM_MPSSE_CABLE.pdf.

In this section it is assumed the 5V version of the MPSSE cable (FTDI part no C232HM-EDHSL-0) is used. In case a 3.3V version of the MPSSE cable (FTDI part no C232HM-DDHSL-0) is available, the setup is similar except for the power pin connection. Refer to table 5-1 for board power configuration.

Figure 5-1 – VM800C connects to PC via VA800A-SPI or MPSSE cable.

Hardware Setup VA800A-SPI

- Solder a 10 position single row pin header to J5 footprint of the VM800C board
- Connect VA800A-SPI to the VM800C module in the correct orientation.
- Connect USB cable (e.g. FTDI accessory **VA-FC-1M-BKW** or **VA-FC-1M-BLW**) from the VA800A-SPI to the PC USB host port.
- VA800A-SPI will supply power to VM800C after MPSSE driver is properly loaded and the USB host completed USB device configuration.

Hardware Setup MPSSE Cable

- Solder a 10 position single row pin header to J5 footprint of the VM800C board
- Configure JP1 to either 3.3V or 5V
 - Power Audio Amp by 3.3V : JP1 pin1 and pin 2 close
 - Power Audio Amp by 5V : JP1 pin2 and pin 3 close (5V board supply must be provided)
- Connect MPSSE leads to VM800C board's J5(SPI interface) in accordance with Table 5-2
- Plug MPSSE cable to PC USB port

Software Setup

- Download PC Base MPSSE software. MPSSE cable and driver information can be found at <http://www.ftdichip.com/Products/Cables/USBMPSSE.htm>.
- Launch the Sample Application based on MPSSE from PC
- For more information on utilizing the VM800C development system with the MPSSE cable and Sample Application, refer to AN_245.
