Table 4-1 – JP1 Pinout

A red LED (Led1) will illuminate after the 5V power supply is applied. This supply will also drive a fixed 3.3V LDO regulator which will provide power to all peripherals of the FT900 microcontroller.

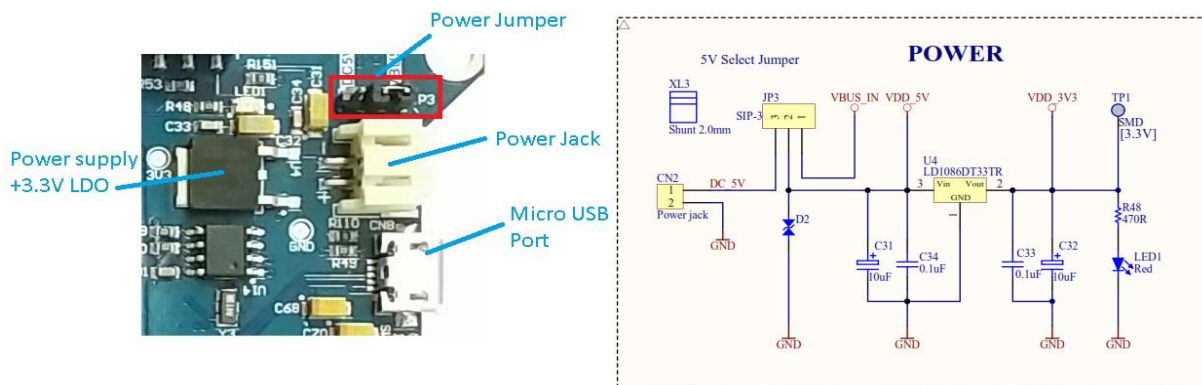

Figure 4-2– Power supply

4.2 Microcontroller

The FT900 100-pin QFN microcontroller (U1) provided on the board belongs to the 32-bit FT90x Microcontroller family from FTDI Chip. For details of the FT900 Microcontroller, refer to the [FT90x datasheet](#).

Figure 4-3– FT900 Microcontroller

There is a crystal used on the MM900EV LITE development board. The 12MHz crystal is the primary system clock frequency supplying the FT900 IC.

The FT900 IC on this board is operated with a single supply of 3.3V. The FT900 Core 1.2V (VOUT1) and Ethernet Regulator 1.2V (VOUT2) sources are unused. These power output pins have decoupling capacitors as specified in the datasheet.

4.3 Micro SD Connector

The FT900 Microcontroller has a SD3.0 controller to support different speed classes, physical sizes and capacities of Secure Digital (SD) cards. There is a Micro SD connector on the MM900EV LITE development module for inserting Micro SD cards (11 x15 x1.0 mm).

There are three standard capacity cards supported:
