Low Profile "Swing-Lock" Board to Wire Connector for Power

DF57 Series

Features

1. Reinforced lock structure with swing lock

A swing-lock structure, featuring our own unique connection method, reinforces the lock structure of the electric cable side, with a structure resistant to tough electric cable routing and disengagement of cables under load.

In addition, the connection surface has a guide insertion to facilitate insertability (patented)

2.Header lock improves plug retention

When connecting, the header connector secures the molded-lance. Play of molded lance is prevented for added strength. (patented)

3. Highly reliable contact structure

Despite the low-profile design, with a stacking height of 1.4mm, an effective mating length of 0.42mm is achieved. The structure features two-point contact terminal geometry with high contact reliability.

4.Insert guide key prevents misalignment

Insert guide key guides the crimp socket to the correct mating position and prevents misalignment, which improves mating operation and prevents possible connector breakage with incorrect mating.

5.Solder wicking prevention

The integral molding eliminates any gap between the terminals and case to prevent solder wicking.

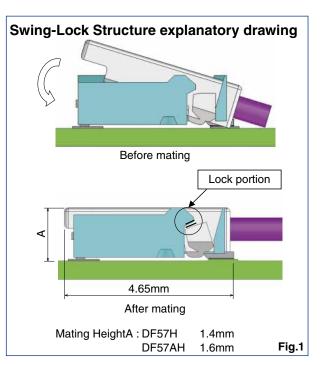

6.Case disengagement prevention

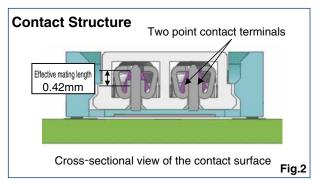

Reinforcing hardware (metal fittings) are integrated in the molding, which help prevent the case from disengaging with the terminals due to tough electric cable routing and load.

7.Cost effective

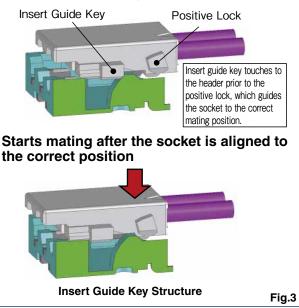

Terminals and metal fittings are collectively integrated into the molding to reduce assembly cost.

(Compliant with UL-CSA standards)

Incorrect Positioning

Item	Specification	Conditions
1.Insulation resistance	100 MΩ min.	100 V DC
2.Withstanding voltage	No flashover or insulation breakdown	500 V AC / 1 minute
3.Contact resistance	10 mΩ max.	20 mV max., at 1 mA.
4.Vibration	No electrical discontinuity of 1 μ s or longer No damage, cracks or parts dislocation.	Frequency: 10 to 55 Hz, single amplitude of 0.75 mm, 10 cycles, 3 direction
5.Shock	No electrical discontinuity of 1 μ s or longer No damage, cracks or parts dislocation.	Acceleration of 490 m/s ² , 11 ms duration, sine half- wave, 3 cycles in each of the 3 axis
6.Humidity	Contact resistance: 20 mΩ max., Insulation resistance: 500 MΩ min. No damage, cracks or parts dislocation.	96 hours at 40 $\pm 2^{\circ}$ C, and humidity of 90 to 95%
7.Temperature	Contact resistance: 20 mΩ max.,	$-55^{\circ}C \rightarrow 5$ to $35^{\circ}C \rightarrow 85^{\circ}C \rightarrow 5$ to $35^{\circ}C$ Times 20 min ~ 2 min to 2 min ~ 20 min ~ 20 min
cycle	Insulation resistance: 500 MΩ min. No damage, cracks or parts dislocation.	Times: 30 min. \rightarrow 2 min. to 3 min. \rightarrow 30 min. \rightarrow 2 min. to 3 min. 5 cycles
8.Durability	Contact resistance: 20 mΩ max., No damage, cracks or parts dislocation.	30 cycles
9.Resistance to soldering heat	No deformation of components affecting performance	Reflow: At the recommended temperature profile Manual soldering: 350°C for 3 seconds

Note 1. Includes temperature rise caused by current flow.

Note 2. The term "storage" refers to products stored for a long period prior to mounting and use. The operating temperature and humidity range covers the non-conducting condition of installed connectors in storage, shipment or during transportation.
