## ◆ Coupling Combination

## ◆ Termination procedure

### ● Plug side (HA16 type, jack side connector follows the same assembly procedure)

## ○ Operation procedure

1. Please choose a cable of which the outside diameter is 4-6mm.
2. Strip insulation of the cable end in the size as shown above.
3. Solder the cable to plug shell.
4. Crimp cable clamper, which holds cable, with a tool.
5. Fit the P shell unit to the cord tube, and tighten the locking screw with a Torque of 0.3-0.4N·m(3.5-4kg·cm) to complete the work.

For details, contact our sales or engineering department before using the model HA16 plugs.

### ● Receptacle side

## ○ Precautions

If heat shrink tubing is applied to the solder terminating section for insulation purposes, overheating could reduce the torque of the screw tightness.

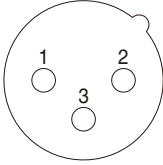

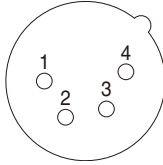

Such overheating may result in loosening and possible loss of the screw. It is advised to confirm that a minimum torque of at least 0.1 N·m is obtained after termination.

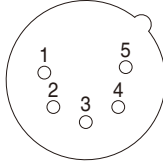

If a torque of at least 0.1 N·m is not realized, the screw should be tightened to between 0.3 and 0.4 N·m.

For details on usage, please contact our Sales or Engineering Department.
