

**For NEW designs consider this replacement product:**

- LUXEON CoB Core Range (Gen 3)

# LUXEON K

Plug and play matrix platform solution with precise flux,  $V_f$  and color

LUXEON K delivers high flux at high efficacy in a small, easy-to-use package. The high lumen density enables high light output in thermally and space constrained systems (like retrofit lamps) and high efficiency in systems aiming for high energy efficiency (such as downlights). The small size bolt-down package enables simple assembly in space constrained systems. With *Freedom from Binning*, every LUXEON K white product falls within a single 3-step MacAdam ellipse positioned around the center point of the ANSI nominal CCT bins to deliver tight CCT control to ensure consistency in system color point. In addition, these parts deliver the lumen maintenance and reliability that all LUXEON LEDs are renowned for.

## FEATURES AND BENEFITS

- 300–5000 lumen packages for a range of options
- 3-step MacAdam ellipse color binning for exceptional lamp to lamp consistency
- L2 design for a reduction in design costs
- Full range of CCTs and CRIs including Royal Blue
- LM-80 test report available

## PRIMARY APPLICATIONS

- Downlights
- Lamps

# General Information

## Product Nomenclature

LUXEON K products are specified and binned “hot” ( $T_j = 85^\circ\text{C}$ ) under conditions comparable to those found in “real-world” lighting products.

The part number designation is explained as follows:

L X K A - P B C D - E F G H J

Where:

- A — designates minimum CRI performance (value 8 = 80 minimum, value 9 = 90 minimum, value 0 for Royal Blue)
- B — designates color (value W = White, value R = Royal Blue)
- C, D — designates nominal ANSI CCT (value 27 = 2700K, 30 = 3000K, 35 = 3500K, 40 = 4000K, 50 = 5000K, and 04 = Royal Blue 447.5nm - 452.5nm peak wavelength)
- E, F — custom spec designation or multi-junction designation (F - Number of strings, H number of emitters, for example 0206, 2 strings of 3 = total emitters of 6)
- G, H — emitter count
- J — denotes a flux upgrade (e.g, A, B, C, etc)

Therefore, 3000K products specified at 350mA 85°C follow the part numbering scheme:

- L X K 8 - P W 3 0 - 0 0 0 4 for LUXEON K White 3000K 4-up
- L X K 8 - P W 3 0 - 0 0 0 8 for LUXEON K White 3000K 8-up
- L X K 0 - P R 0 4 - 0 0 0 8 for LUXEON K Royal Blue 8-up

## Average Lumen Maintenance Characteristics

Lumen maintenance for solid-state lighting devices (LEDs) is typically defined in terms of the percentage of initial light output remaining after a specified period of time. Lumileds projects that LUXEON K products will deliver, on average, 70% lumen maintenance (L70) at 50,000 hours of operation at a forward current of up to 700mA. This projection is based on constant current operation with junction temperature maintained at or below 125°C. This performance is based on independent test data, Lumileds historical data from tests run on similar material systems, and internal LUXEON reliability testing. Observation of design limits included in this data sheet is required in order to achieve this projected lumen maintenance.

## Environmental Compliance

Lumileds is committed to providing environmentally friendly products to the solid-state lighting market. LUXEON K is compliant to the European Union directives on the restriction of hazardous substances in electronic equipment, namely the RoHS directive. Lumileds will not intentionally add the following restricted materials to the LUXEON K: lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE).

# Product Selection

## Product Selection Guide for LUXEON K White, Junction Temperature = 85°C

Notes for Table 1:

1. Lumileds maintains a tolerance of  $\pm 6.5\%$  on luminous flux and  $\pm 2$  on CRI measurements.
2. \* = High voltage multi-junction.
3. \*\* = Parts with original flux performance (before flux upgrade).

## Product Selection Guide for LUXEON K Royal Blue, Junction Temperature = 85°C, Test Current = 350mA

Table 2.

Color	Emitter Count	Part Number	Minimum Radiometric Power (mW)	Typical Radiometric Power (mW)	Maximum Radiometric Power (mW)	Typical Radiant Efficiency (%)
Royal Blue	8	LXK0-PR04-0008	4500	4670	5400	62%
Royal Blue	16	LXK0-PR04-0016	9000	9350	10800	62%

# Optical Characteristics

## LUXEON K White at Test Current, Junction Temperature = 85°C

Table 3.

Part Number	Nominal CCT	Color Temperature CCT	Typical Total Included Angle <sup>[2]</sup> (degrees) $\theta_{90V}$	Typical Viewing Angle <sup>[2]</sup> (degrees) $2\theta_{1/2}$
		Typical		
LXKx-PW27-xxxx(A)	2700K	2725K	125	100
LXKx-PW30-xxxx(A)	3000K	3045K	125	100
LXKx-PW35-xxxx	3500K	3465K	125	100
LXKx-PW40-xxxx(A)	4000K	3985K	125	100
LXKx-PW50-xxxx	5000K	5028K	125	100

Notes for Table 3:

1. Total angle at which 90% of total luminous flux is captured.
2. Viewing angle is the off axis angle from lamp centerline where the luminous intensity is 1/2 of the peak value.

## LUXEON K Royal Blue (LXK0-PRxx) at Test Current <sup>[1]</sup>, Junction Temperature = 85°C

Table 4.

Part Color	Peak Wavelength, $\lambda_p$ <sup>[2]</sup>			Typical Spectral Half-width (nm) <sup>[3]</sup> $\Delta\lambda_{1/2}$	Typical Temp Coefficient of Peak Wavelength (nm/°C) $\Delta\lambda_{1/2}$	Typical Total Included Angle <sup>[4]</sup> (degrees) $\theta_{90V}$	Typical Viewing Angle <sup>[5]</sup> (degrees) $2\theta_{1/2}$
	Min	Typ	Max				
Royal Blue	447.5nm	450nm	452.5nm	20	0.05	140	116

Notes for Table 4:

1. Test current is 350mA for all LXK0-PRxx products.
2. Royal Blue product has single peak wavelength bin.
3. Spectral half-width is 1/2 of the peak intensity.
4. Total included angle at which 90% of total radiometric power is captured.
5. Viewing angle is the off-axis angle from lamp centerline where the luminous intensity is 1/2 of the peak value.

# Electrical Characteristics

Electrical Characteristics at Test Current for LUXEON K White and Royal Blue, Junction Temperature = 85°C

Table 5.

Part Number	Forward Voltage $V_f$ <sup>(1)</sup> (V)			Typical Temperature Coefficient of Forward Voltage (mV/°C) $\Delta V_f / \Delta T_J$	Typical Thermal Resistance Junction to Case (°C/W) $R_{\theta J-c}$
