**Notes:**

- 50 A rating refer to models with pressure wire connectors only.
- Resistive AC load ratings are based on a power factor of 0.85 to 1.0.
- Motor horsepower ratings are based on a power factor of 0.4 to 0.5, and an initial inrush current not in excess of six times the full load current.
- All ratings are based on applying the rated nominal power to the relay coil in such a manner as to provide a "clean" make and break, and does not result in any contact chatter or multiple actuation of the contacts.
- The tungsten rating is based on cold filament inrush current not exceeding 15 times the rated steady state lamp current.
