

General Description

The MAX14502 evaluation kit (EV kit) provides a proven design to evaluate the MAX14502 Hi-Speed USB-to-SD card reader. The EV kit includes Windows® 2000/XPand Windows Vista®-compatible software that provides a simple graphical user interface (GUI) for exercising the features of the MAX14502.

The MAX14502 EV kit has a built-in USB-to-I²C bridge, allowing a PC to access the internal I2C registers of the MAX14502, as well as providing the power for the EV kit.

The MAX14502 EV kit PCB comes with a MAX14502AETL+ installed. The EV kit can also be used to evaluate the MAX14500AETL+, MAX14501AETL+, and MAX14503AETL+ by replacing the MAX14502AETL+, and changing the crystal oscillator frequency according to the device used or by applying an appropriate external clock on the SMA connector. Contact the factory for free samples of the MAX14500AETL+, MAX14501AETL+, and MAX14503AETL+.

Windows and Windows Vista are registered trademarks of Microsoft Corp.

Features

- ♦ Simple and I²C Control Modes
- ♦ On-Board SD Card Socket, USB Type-A, and USB **Type-B Connectors**
- ♦ Default 19.2MHz Input Clock, Alternative Input **Clock Connector Provided**
- **♦** External Microprocessor Connections Provided
- ♦ Windows 2000/XP- and Windows Vista (32-Bit)-Compatible Software
- ♦ On-Board USB-to-I²C Bridge
- ♦ USB Powered (Cable Included)
- **♦ Lead(Pb)-Free and RoHS Compliant**
- ♦ Proven PCB Layout
- **♦ Fully Assembled and Tested**

MAX14502 EV Kit Files

FILE	DESCRIPTION
INSTALL.EXE	Installs the EV kit files on your computer
MAX14502.EXE	Application program
UNINST.INI	Uninstalls the EV kit software

. ______NIXI/N

Quick Start

Required Equipment

Before beginning, the following equipment is needed:

- MAX14502 EV kit (USB cables included)
- A user-supplied Windows 2000-/XP-/Vista-compatible PC with two spare USB ports
- A user-supplied SD card
- A user-supplied USB mouse (or other low-/fullspeed USB device)

Note: In the following sections, software-related items are identified by bolding. Text in **bold** refers to items directly from the EV kit software. Text in **bold and underlined** refers to items from the Windows operating system.

Procedure

The MAX14502 EV kit is fully assembled and tested. Follow the steps below to verify board operation:

- Visit <u>www.maxim-ic.com/evkitsoftware</u> to download the latest version of the EV kit software, 14502Rxx.ZIP. Save the EV kit software to a temporary folder and uncompress the ZIP file.
- Install the EV kit software on your computer by running the INSTALL.EXE program inside the temporary folder. The program files are copied and icons are created in the Windows <u>Start I Programs</u> menu.
- 3) Verify that all jumpers are in their default positions, as shown in Table 1.
- 4) Move slider switch SW1 to the on position.

- 5) Insert the SD card into the SD card socket (J1).
- 6) Connect the USB type-B connector (J6) to one of the PC USB ports.
- 7) Verify that the D2 green LED and the D4 yellow LED on the EV kit board are lit.
- 8) Connect the USB mouse to the type-A USB connector (J3).
- Connect the USB type-B connector (J2) to another PC USB port.
- 10) Verify that the PC recognizes the USB mouse.
- 11) Start the MAX14502 EV kit software by opening its icon in the **Start I Programs** menu.
- 12) The EV kit software main window appears, as shown in Figure 1. Verify that **Hardware: Connected** is displayed on the status bar at the bottom of the software main window.
- 13) In the **Bridge Mode** group box, select the **Pass Thru** radio button to set the MAX14502 in pass thru
 mode. Verify that **MAX14502: Simple Control/Pass Thru Mode** is displayed on the status bar.
- 14) In the Bridge Mode group box, select the Card Reader radio button to set the MAX14502 in card reader mode. Verify that MAX14502: Simple Control/Card Reader Mode is displayed on the status bar.
- 15) Verify that the PC recognizes the SD card.
- 16) On the EV kit board, verify that the D1 green LED is lit, indicating that the internal microcontroller in the MAX14502 is activated in card reader mode.

Figure 1. MAX14502 Software Main Window (Simple Control Mode)

Figure 2. MAX14502 Software Main Window (Graphical View Tab)

- 17) Press the Change To I2C Control button to set the MAX14502 in I²C control mode. Verify that MAX14502 Connected on Address: 0xE0 is displayed on the status bar. All the I²C register controls are available on the GUI, as shown in Figure 2.
- 18) Verify that the PC recognizes the USB mouse.

Detailed Description of Software

The software sets the MAX14502 in either simple or I²C control mode.

In simple control mode, the user can set the device in either pass thru or card reader mode. When the EV kit is connected correctly, the software automatically monitors the status of the BERR pin.

There are two tabs when the software works in I²C control mode.

______/N/XI/N

Graphical View Tab

When the **Graphical View** tab (Figure 2) is selected, a user has access to all of the I²C registers through the on-board USB-to-I²C bridge.

The embedded picture shows the current mode of the device. A command log window displays the read and write operations on the MAX14502.

The status register (0x12) bit values are displayed in the **Status** group box. When the solid circle is green, it indicates a value of 1. When the solid circle is gray, it indicates a value of 0.

When the INT pin is asserted, the solid circle beside the **INT Pin** label turns red. Otherwise, it is gray.

When the on-board USB-to-I²C bridge detects the presence of the MAX14502, the solid circle beside the **Ready** label turns green. If the EV kit is not connected correctly, the circle is gray.

Press the **Query** button to read all the register values.

Press the **Load...** button to load the register settings from a text file.

Press the **Save...** button to save the current register settings to a text file.

Press the **Reset EVKIT** button to reset the EV kit, including the USB re-enumeration on J6. The MAX14502 is reset to its power-on-reset (POR) state.

Register View Tab

On the **Register View** tab (Figure 3), detailed names and values of the registers are displayed.

Refer to the MAX14500-MAX14503 IC data sheet for the detailed descriptions of all the registers available in I²C control mode.

Software Menu Bar

Select **File I Exit** to exit the application.

The **Help** menu item gives information about this EV kit software.

Detailed Description of Hardware

The MAX14502 operates in pass thru and card reader mode. The device can be controlled in two ways: simple control method and I²C control method.

The MAX14502 EV kit board provides a proven layout for evaluating the device. The EV kit comes with one MAX14502AETL+ installed.

Power Supplies

By default, the EV kit is powered by USB (J6). The different power supplies for the MAX14502 can be applied according to user requirements. See Table 1 for possible power-supply configurations.

Alternative Input Clock

By default, the MAX14502 uses the on-board 19.2MHz crystal oscillator output as the input clock. The user can apply alternative clocks on the SMA connector (J5) and set the shunt of jumper JU2 in the 2-3 position.

Reset MAX14502

The MAX14502 is reset by pressing and releasing switch SW2.

JU13 Ju13 1-2* VTM connected to on-board +3.3V power supply	11.110	1-2*	VCC connected to on-board +3.3V power supply		
JU13 Open VTM applied externally on the VTM test point 1-2* On-board crystal oscillator powered by on-board +3V power supply Open On-board crystal oscillator powered externally on the VOSC test point 1-2* VSD connected to on-board +3.3V power supply Open VSD applied externally on the VSD test point 1-2* SD card powered by on-board +3.3V power supply Open SD card powered externally on the VSD_C test point 1-2* VIO connected to on-board +3.3V power supply JU17 2-3 VIO connected to MAXQ2000 VDDIO Open VIO applied externally on the VIO test point 1-2* VIO_U1 connected to on-board +3.3V power supply JU18 2-3 VIO_U1 connected to MAXQ2000 VDDIO	JU 12	Open	VCC applied externally on the VCC test point		
JU14 1-2* On-board crystal oscillator powered by on-board +3V power supply Open On-board crystal oscillator powered externally on the VOSC test point JU15 1-2* VSD connected to on-board +3.3V power supply Open VSD applied externally on the VSD test point JU16 1-2* SD card powered by on-board +3.3V power supply Open SD card powered by on-board +3.3V power supply JU17 1-2* VIO connected to on-board +3.3V power supply JU17 2-3 VIO connected to MAXQ2000 VDDIO Open VIO applied externally on the VIO test point 1-2* VIO_U1 connected to on-board +3.3V power supply JU18 2-3 VIO_U1 connected to MAXQ2000 VDDIO	11.11.2	1-2*	VTM connected to on-board +3.3V power supply		
Open On-board crystal oscillator powered externally on the VOSC test point 1-2* VSD connected to on-board +3.3V power supply Open VSD applied externally on the VSD test point 1-2* SD card powered by on-board +3.3V power supply Open SD card powered externally on the VSD_C test point 1-2* VIO connected to on-board +3.3V power supply JU17 2-3 VIO connected to MAXQ2000 VDDIO Open VIO applied externally on the VIO test point 1-2* VIO_U1 connected to on-board +3.3V power supply JU18 2-3 VIO_U1 connected to MAXQ2000 VDDIO	3013	Open	VTM applied externally on the VTM test point		
JU15 Open On-board crystal oscillator powered externally on the VOSC test point 1-2* VSD connected to on-board +3.3V power supply Open VSD applied externally on the VSD test point 1-2* SD card powered by on-board +3.3V power supply Open SD card powered externally on the VSD_C test point 1-2* VIO connected to on-board +3.3V power supply JU17 2-3 VIO connected to MAXQ2000 VDDIO Open VIO applied externally on the VIO test point 1-2* VIO_U1 connected to on-board +3.3V power supply JU18 2-3 VIO_U1 connected to MAXQ2000 VDDIO	11.14.4	1-2*	On-board crystal oscillator powered by on-board +3V power supply		
JU16 Open VSD applied externally on the VSD test point 1-2* SD card powered by on-board +3.3V power supply Open SD card powered externally on the VSD_C test point 1-2* VIO connected to on-board +3.3V power supply JU17 2-3 VIO connected to MAXQ2000 VDDIO Open VIO applied externally on the VIO test point 1-2* VIO_U1 connected to on-board +3.3V power supply JU18 2-3 VIO_U1 connected to MAXQ2000 VDDIO	3014	Open	On-board crystal oscillator powered externally on the VOSC test point		
JU16 Open VSD applied externally on the VSD test point 1-2* SD card powered by on-board +3.3V power supply Open SD card powered externally on the VSD_C test point 1-2* VIO connected to on-board +3.3V power supply JU17 2-3 VIO connected to MAXQ2000 VDDIO Open VIO applied externally on the VIO test point 1-2* VIO_U1 connected to on-board +3.3V power supply JU18 2-3 VIO_U1 connected to MAXQ2000 VDDIO	11.115	1-2*	VSD connected to on-board +3.3V power supply		
JU16 Open SD card powered externally on the VSD_C test point 1-2* VIO connected to on-board +3.3V power supply JU17 2-3 VIO connected to MAXQ2000 VDDIO Open VIO applied externally on the VIO test point 1-2* VIO_U1 connected to on-board +3.3V power supply JU18 2-3 VIO_U1 connected to MAXQ2000 VDDIO	3013	Open	VSD applied externally on the VSD test point		
JU18 SD card powered externally on the VSD_C test point 1-2* VIO connected to on-board +3.3V power supply VIO connected to MAXQ2000 VDDIO Open VIO applied externally on the VIO test point 1-2* VIO_U1 connected to on-board +3.3V power supply JU18 2-3 VIO_U1 connected to MAXQ2000 VDDIO	11.116	1-2*	SD card powered by on-board +3.3V power supply		
JU17 2-3 VIO connected to MAXQ2000 VDDIO Open VIO applied externally on the VIO test point 1-2* VIO_U1 connected to on-board +3.3V power supply JU18 2-3 VIO_U1 connected to MAXQ2000 VDDIO	Open		SD card powered externally on the VSD_C test point		
Open VIO applied externally on the VIO test point 1-2* VIO_U1 connected to on-board +3.3V power supply JU18 2-3 VIO_U1 connected to MAXQ2000 VDDIO		1-2*	VIO connected to on-board +3.3V power supply		
JU18 2-3 VIO_U1 connected to on-board +3.3V power supply VIO_U1 connected to MAXQ2000 VDDIO	JU17	2-3	VIO connected to MAXQ2000 VDDIO		
JU18 2-3 VIO_U1 connected to MAXQ2000 VDDIO		Open	VIO applied externally on the VIO test point		
		1-2*	VIO_U1 connected to on-board +3.3V power supply		
Open VIO_U1 applied externally on the VIO_U1 test point	JU18	2-3			
		Open	VIO_U1 applied externally on the VIO_U1 test point
