NB6L11M

2.5V / 3.3V 1:2 Differential CML Fanout Buffer

Multi−Level Inputs w/ Internal Termination

ON Semiconductor®

http://onsemi.com

Description

The NB6L11M is a differential 1:2 CML fanout buffer. The differential inputs incorporate internal 50 Ω termination resistors that are accessed through the V_T pins and will accept LVPECL, LVCMOS, LVTTL, CML, or LVDS logic levels.

The V_{REFAC} pin is an internally generated voltage supply available to this device only. V_{REFAC} is used as a reference voltage for single−ended PECL or NECL inputs. For all single−ended input conditions, the unused complementary differential input is connected to V_{REFAC} as a switching reference voltage. V_{REFAC} may also rebias capacitor−coupled inputs. When used, decouple V_{REFAC} with a 0.01 μF capacitor and limit current sourcing or sinking to 0.5 mA. When not used, V_{REFAC} output should be left open.

The device is housed in a small 3x3 mm 16 pin QFN package.

The NB6L11M is a member of the ECLinPS MAX™ family of high performance clock products.
