2.5 V/3.3 V Differential 1:2 Clock/Data Fanout Buffer/Translator with CML Outputs and Internal Termination

Description

The NB7L11M is a differential 1-to-2 clock/data distribution chip with internal source termination and CML output structure, optimized for low skew and minimal jitter. The device is functionally equivalent to the EP11, LVEP11, or SG11 devices. Device produces two identical output copies of clock or data operating up to 8 GHz or 12 Gb/s, respectively. As such, NB7L11M is ideal for SONET, GigE, Fiber Channel, Backplane and other clock/data distribution applications.

Inputs incorporate internal 50 Ω termination resistors and accept LVPECL, CML, LVCMOS, LVTTTL, or LVDS (See Table 6). Differential 16 mA CML output provides matching internal 50 Ω terminations, and 400 mV output swings when externally terminated, 50 Ω to V_{CC} (See Figure 14).

The device is offered in a low profile 3x3 mm 16-pin QFN package. Application notes, models, and support documentation are available at www.onsemi.com.

1. Measured by forcing V_{INPP} (TYP) from a 50% duty cycle clock source. All loading with an external $R_L = 50\ \Omega$ to V_{CC} . Input edge rates 40 ps (20% – 80%).
2. Duty cycle skew is measured between differential outputs using the deviations of the sum of T_{pw-} and T_{pw+} @1 GHz.
3. Device to device skew is measured between outputs under identical transition @ 1 GHz.
4. Additive RMS jitter with 50% duty cycle clock signal at 8 GHz & 10 GHz.
5. Additive peak-to-peak data dependent jitter with input NRZ data at PRBS $2^{23}-1$.
6. V_{INPP} (MAX) cannot exceed $V_{CC} - V_{EE}$. Input voltage swing is a single-ended measurement operating in differential mode.

Application Information

All NB7L11M inputs can accept PECL, CML, LVTTTL, LVC MOS and LVDS signal levels. The limitations for differential input signal (LVDS, PECL, or CML) are

minimum input swing of 75 mV and the maximum input swing of 2500 mV. Within these conditions, the input voltage can range from V_{CC} to 1.2 V. Examples interfaces are illustrated below in a 50 Ω environment ($Z = 50 \Omega$).
