## 1/4 and 1/3-Duty General-Purpose LCD Display Driver

### Overview

The LC75809PT is the 1/4 duty and 1/3 duty general-purpose microprocessor-controlled LCD driver that can be used in applications such as frequency display in products with electronic tuning. In addition to being able to drive up to 352 segments directly, the LC75809PT can also control up to 12 general-purpose output ports. Because it has the PWM output of a maximum of 6ch, the brightness control of the LED backlight of RGB×2 can be done. Incorporation of an oscillation circuit helps to reduce the number of external resistors and capacitors required.

### Features

- Support for 1/4-duty 1/3-bias or 1/3-duty 1/3-bias drive techniques under serial data control.
  - When 1/4-duty : Capable of driving up to 352 segments
  - When 1/3-duty : Capable of driving up to 267 segments
- Serial data input supports CCB format communication with the system controller. (Support 3.3V and 5V operation)
- Serial data control of the power-saving mode based backup function and the all segments forced off function.
- Serial data control of switching between the segment output port and general-purpose output port function. (Support for up to 12 general-purpose output ports)
- Support for the PWM output function of a maximum of 6ch. (It can output from the general-purpose output port).
- Support for clock output function of 1ch. (It can output from the general-purpose output port).
- Serial data control of the frame frequency of the common and segment output waveforms.
- Serial data control of switching between the internal oscillator operating mode and external clock operating mode.
- High generality, since display data is displayed directly without the intervention of a decoder circuit.
- Built-in display contrast adjustment circuit.
- The  $\overline{\text{INH}}$  pin allows the display to be forced to the off state.
- Incorporation of an oscillator circuit. (Incorporation of resistor and capacitor for an oscillation)

• CCB is ON Semiconductor® 's original format. All addresses are managed by ON Semiconductor® for this format.

- CCB is a registered trademark of Semiconductor Components Industries, LLC.

# LC75809PT

## Specifications

**Absolute Maximum Ratings** at Ta = 25°C, VSS = 0V

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	V <sub>DD</sub> max	V <sub>DD</sub>	-0.3 to +6.8	V
Input voltage	V <sub>IN1</sub>	CE, CL, DI, $\overline{\text{INH}}$	-0.3 to +6.8	V
	V <sub>IN2</sub>	OSCI, V <sub>DD1</sub> , V <sub>DD2</sub>	-0.3 to V <sub>DD</sub> +0.3	
Output voltage	V <sub>OUT</sub>	S1 to S89, COM1 to COM4, P1 to P12	-0.3 to V <sub>DD</sub> +0.3	V
Output current	I <sub>OUT1</sub>	S1 to S88	300	μA
	I <sub>OUT2</sub>	COM1 to COM4, S89	3	mA
	I <sub>OUT3</sub>	P1 to P12	5	
Allowable power dissipation	Pd max	Ta=85°C	200	mW
Operating temperature	Topr		-40 to +85	°C
Storage temperature	Tstg		-55 to +125	°C

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

**Allowable Operating Ranges** at Ta = -40 to +85°C, VSS = 0V

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Supply voltage	V <sub>DD</sub>	V <sub>DD</sub>	4.5		6.3	V
Input voltage *1	V <sub>DD1</sub>	V <sub>DD1</sub>		2/3V <sub>DD0</sub>	V <sub>DD0</sub>	V

## 3. 1/4 duty (Simple mode transfer)

### (1) When CL is stopped at the low level

Note: DD is the direction data.

# LC75809PT

(2) When CL is stopped at the high level

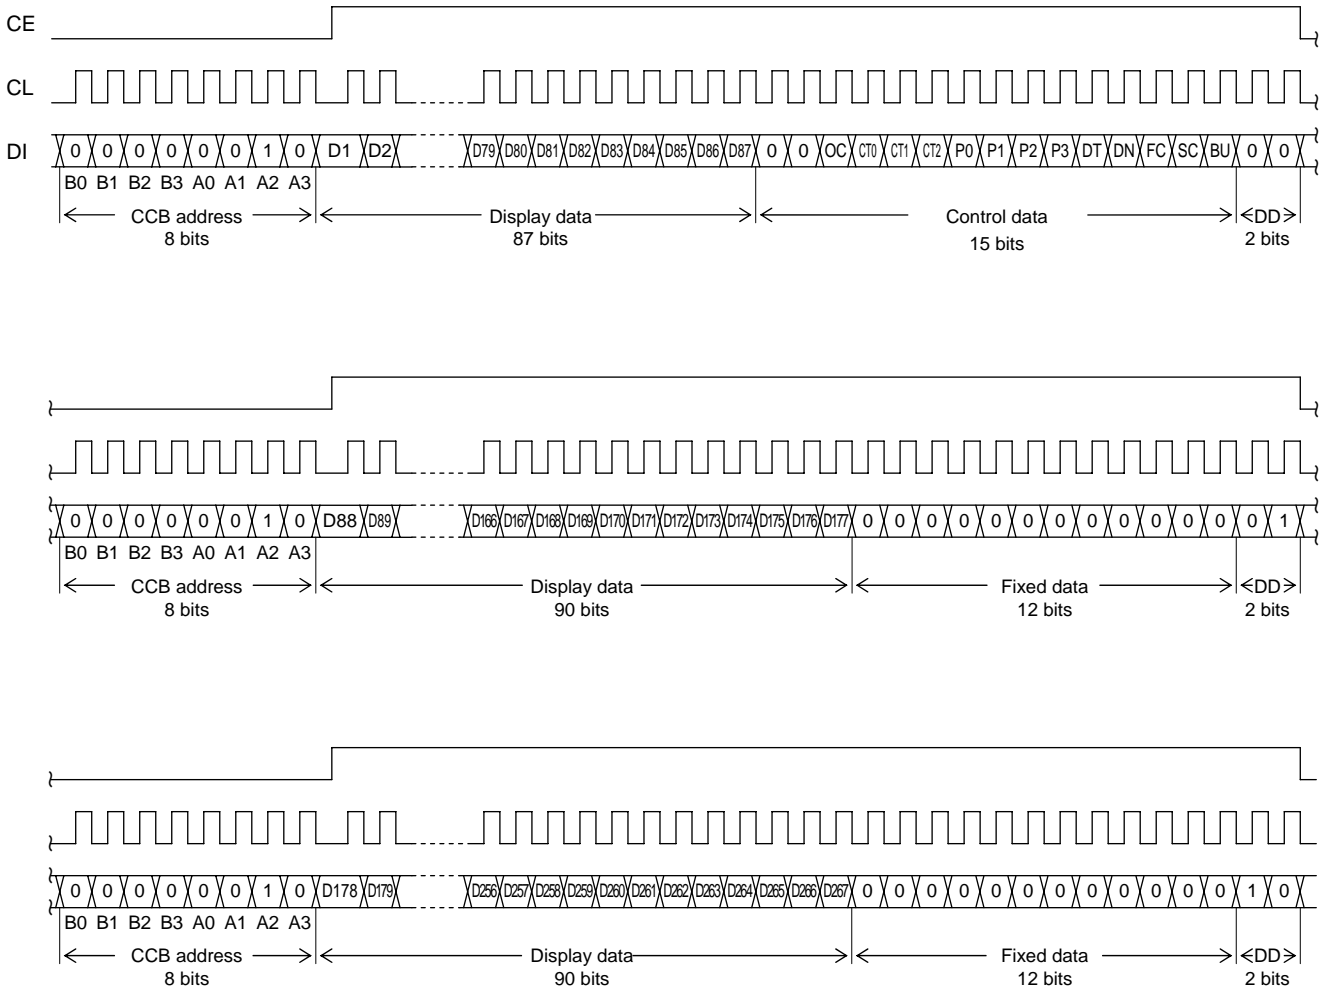

Note: DD is the direction data

- CCB address ..... “40H”
- D1 to D352 ..... Display data
- OC ..... Internal oscillator operating mode/external clock operating mode switching control data
- CT0 to CT2 ..... Display contrast setting control data
- P0 to P3 ..... Segment output port/general-purpose output port switching control data
- DT ..... 1/4-duty 1/3-bias drive or 1/3-duty 1/3-bias drive switching control data
- DN ..... S88 pin and S89/OSCI pin state setting control data
- FC ..... Common/segment output waveform frame frequency setting control data
- SC ..... Segment on/off control data
- BU ..... Normal mode/power-saving mode control data

# LC75809PT

4. 1/3 duty (Simple mode transfer)  
 (1) When CL is stopped at the low level

Note: DD is the direction data.

# LC75809PT

(2) When CL is stopped at the high level

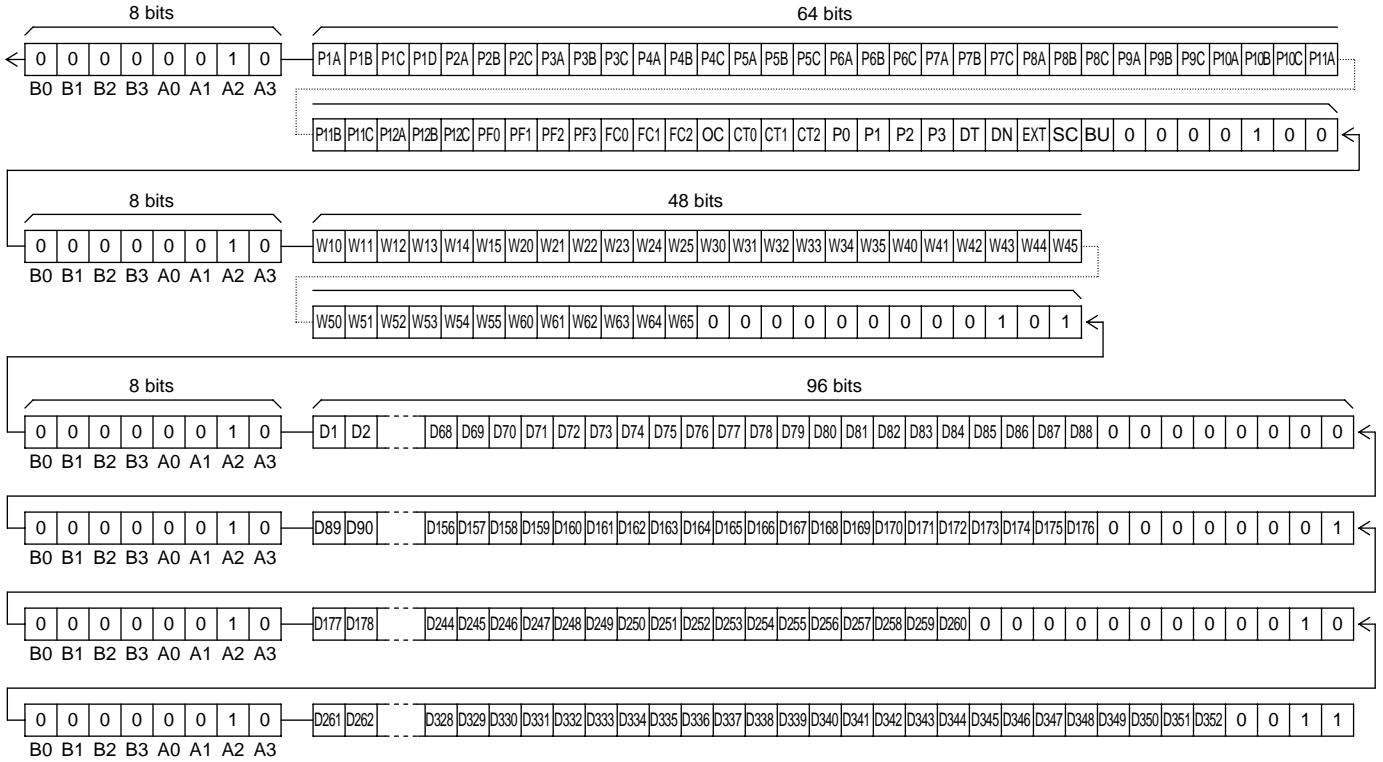

Note: DD is the direction data

- CCB address ..... “40H”
- D1 to D267 ..... Display data
- OC ..... Internal oscillator operating mode/external clock operating mode switching control data
- CT0 to CT2 ..... Display contrast setting control data
- P0 to P3 ..... Segment output port/general-purpose output port switching control data
- DT ..... 1/4-duty 1/3-bias drive or 1/3-duty 1/3-bias drive switching control data
- DN ..... S88 pin and S89/OSCI pin state setting control data
- FC ..... Common/segment output waveform frame frequency setting control data
- SC ..... Segment on/off control data
- BU ..... Normal mode/power-saving mode control data

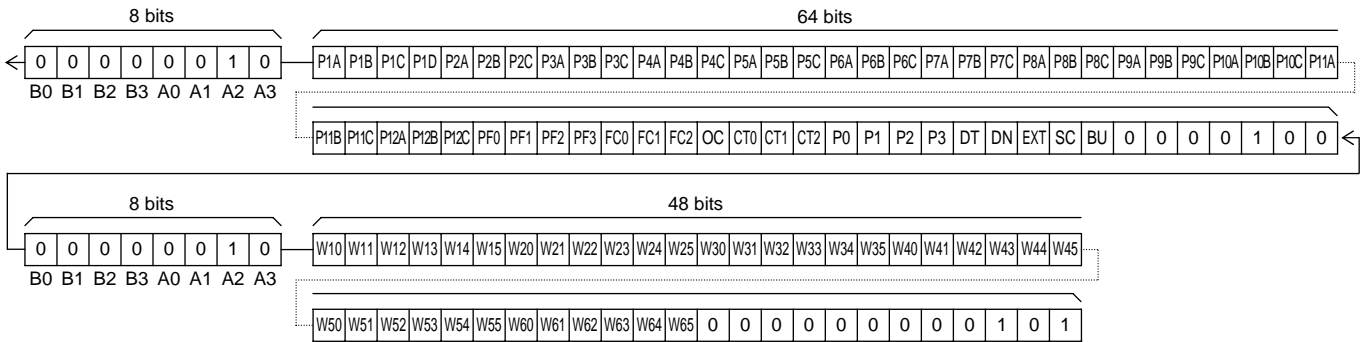

**Serial Data Transfer Example**

1. 1/4 duty

- When 261 or more segments are used  
All 496 bits of serial data must be sent.

- When fewer than 261 segments are used  
The serial data shown below (the control data) must always be sent.

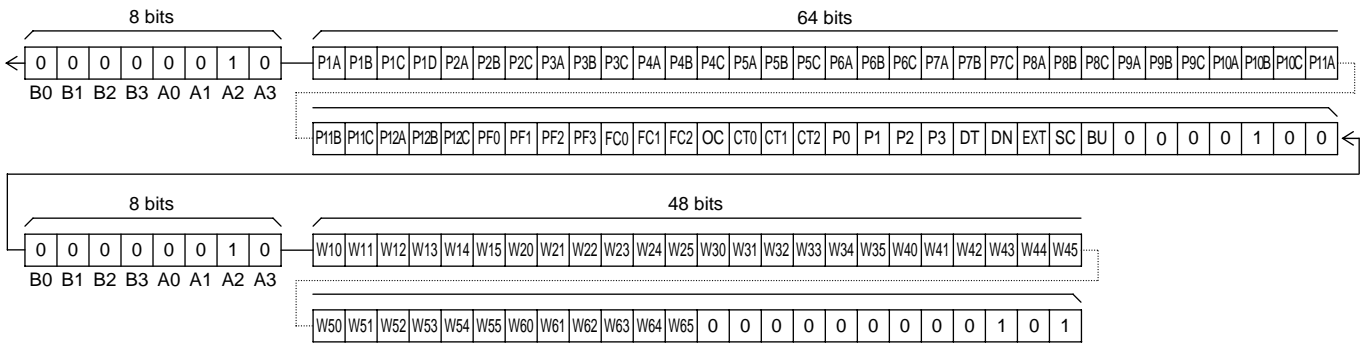

# LC75809PT

## 2. 1/3 duty

- When 178 or more segments are used  
All 400 bits of serial data must be sent.

- When fewer than 178 segments are used  
The serial data shown below (the control data) must always be sent.

# LC75809PT

### 3. 1/4 duty (Simple mode transfer)

- When 261 or more segments are used  
All 416 bits of serial data must be sent.

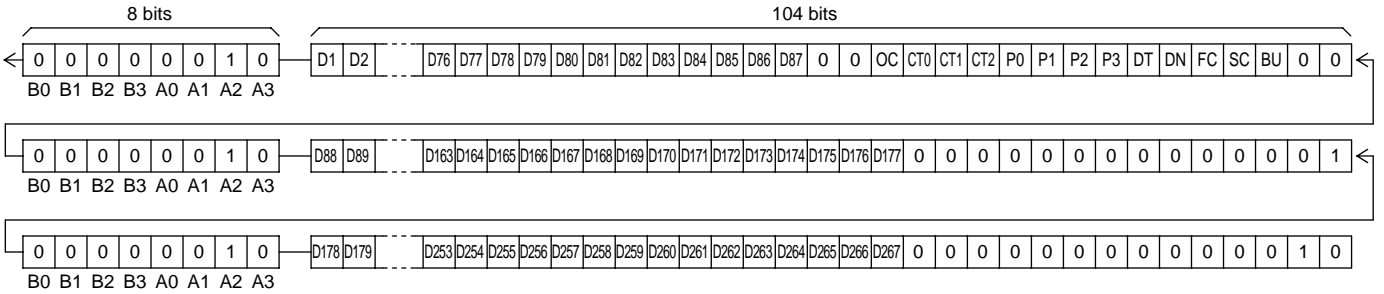

- When fewer than 261 segments are used  
Either 104, 208 or 312 bits of serial data must be sent, depending on the number of segments to be used.  
However, the serial data shown below (the D1 to D88 display data and the control data) must always be sent.

### 4. 1/3 duty (Simple mode transfer)

- When 178 or more segments are used  
All 312 bits of serial data must be sent.

- When fewer than 178 segments are used  
Either 104 or 208 bits of serial data must be sent, depending on the number of segments to be used.  
However, the serial data shown below (the D1 to D87 display data and the control data) must always be sent.

**Control Data Functions**

(1) P1A,P1B,P1C,P1D ..... General-purpose output port (P1) function setting control data  
 P2A,P2B,P2C to P12A,P12B,P12C ... General-purpose output port (P2 to P12) function setting control data

These control data bits set the general-purpose output function (High or low level output), PWM output function or clock output function of the P1 output pin, and the general-purpose output function (High or low level output) or PWM output function of the P2 to P12 output pins.

However, be careful of being unable to set a PWM output function when the external clock operating frequency is set the  $f_{CK2}=38[\text{kHz}]_{\text{typ}}$  (EXF="1") in external clock operating mode (OC= "1").

In addition, be careful of setting of the general-purpose output function (High or low level output) in the case of the simple mode transfer forcibly.

P1A	P1B	P1C	P1D	General-purpose output port (P1) function
0	0	0	0	General-purpose output function (High or low level output)
1	0	0	0	PWM output function (Ch1) (Support for PWM data W10 to W15)
0	1	0	0	PWM output function (Ch2) (Support for PWM data W20 to W25)
1	1	0	0	PWM output function (Ch3) (Support for PWM data W30 to W35)
0	0	1	0	PWM output function (Ch4) (Support for PWM data W40 to W45)
1	0	1	0	PWM output function (Ch5) (Support for PWM data W50 to W55)
0	1	1	0	PWM output function (Ch6) (Support for PWM data W60 to W65)
1	1	1	0	Clock output function (Clock frequency : $f_{osc}/2, f_{CK}/2$ )
0	0	0	1	Clock output function (Clock frequency : $f_{osc}/8, f_{CK}/8$ )

Note : When are setting (P1A,P1B,P1C,P1D)=(1,X,X,1), (X,1,X,1), and (X,X,1,1), the function of general-purpose output ports P1 is set the general-purpose output function (High or low level output). X: don't care

PnA	PnB	PnC	General-purpose output port (P2 to P12) function
0	0	0	General-purpose output function (High or low level output)
1	0	0	PWM output function (Ch1) (Support for PWM data W10 to W15)
0	1	0	PWM output function (Ch2) (Support for PWM data W20 to W25)
1	1	0	PWM output function (Ch3) (Support for PWM data W30 to W35)
0	0	1	PWM output function (Ch4) (Support for PWM data W40 to W45)
1	0	1	PWM output function (Ch5) (Support for PWM data W50 to W55)
0	1	1	PWM output function (Ch6) (Support for PWM data W60 to W65)

Note1 : The data PnA, PnB and PnC (Note : n=2 to 12) are the control data switching the general-purpose output function or PWM output function of the general-purpose output ports Pn (Note : n=2 to 12).

For example, if the S10/P10 output pin is set the general-purpose output port, the general-purpose output port P10 pin is selected the PWM output function (Ch1) when (P10A,P10B,P10C)=(1,0,0).

Note2 : When are setting (PnA,PnB,PnC)=(1,1,1) / (Note : n=2 to 12), the function of general-purpose output ports Pn (Note : n=2 to 12) is set the general-purpose output function (High or low level output).

## LC75809PT

### (2) PF0 to PF3 ... PWM output waveform frame frequency setting control data

These control data bits set the frame frequency of the PWM output waveforms. However, when the PWM output function isn't used, these control data bits become invalid. In addition, when the external clock operating frequency is set the  $f_{CK2}=38[\text{kHz}]$  typ (EXF="1") in external clock operating mode (OC="1") or when the serial data transfer is the simple mode transfer, these control data bits become invalid.

Control data				PWM output waveform frame frequency fp[Hz]	
PF0	PF1	PF2	PF3	Internal oscillator operating mode (The control data OC is 0, $f_{osc}=300[\text{kHz}]$ typ)	External clock operating mode (The control data OC is 1 and EXF is 0, $f_{CK1}=300[\text{kHz}]$ typ)
0	0	0	0	$f_{osc}/1536$	$f_{CK1}/1536$
1	0	0	0	$f_{osc}/1408$	$f_{CK1}/1408$
0	1	0	0	$f_{osc}/1280$	$f_{CK1}/1280$
1	1	0	0	$f_{osc}/1152$	$f_{CK1}/1152$
0	0	1	0	$f_{osc}/1024$	$f_{CK1}/1024$
1	0	1	0	$f_{osc}/896$	$f_{CK1}/896$
0	1	1	0	$f_{osc}/768$	$f_{CK1}/768$
1	1	1	0	$f_{osc}/640$	$f_{CK1}/640$
0	0	0	1	$f_{osc}/512$	$f_{CK1}/512$
1	0	0	1	$f_{osc}/384$	$f_{CK1}/384$
0	1	0	1	$f_{osc}/256$	$f_{CK1}/256$

Note : When is setting (PF0,PF1,PF2,PF3)=(1,1,0,1) and (X,X,1,1), the frame frequency is same as frame frequency at the time of the (PF0,PF1,PF2,PF3)=(1,0,1,0) setting ( $f_{osc}/896$ ,  $f_{CK1}/896$ ). X: don't care

### (3) FC0 to FC2 ... Common/segment output waveform frame frequency control data

These control data bits set the frame frequency of the common and segment output waveforms.

Control data			Common/segment output waveform frame frequency fo[Hz]		
FC0	FC1	FC2	Internal oscillator operating mode (The control data OC is 0, $f_{osc}=300[\text{kHz}]$ typ)	External clock operating mode (The control data OC is 1 and EXF is 0, $f_{CK1}=300[\text{kHz}]$ typ)	External clock operating mode (The control data OC is 1 and EXF is 1, $f_{CK2}=38[\text{kHz}]$ typ)
0	0	0	$f_{osc}/6144$	$f_{CK1}/6144$	$f_{CK2}/768$
0	0	1	$f_{osc}/4608$	$f_{CK1}/4608$	$f_{CK2}/576$
0	1	0	$f_{osc}/3072$	$f_{CK1}/3072$	$f_{CK2}/384$
0	1	1	$f_{osc}/2304$	$f_{CK1}/2304$	$f_{CK2}/288$
1	0	0	$f_{osc}/1536$	$f_{CK1}/1536$	$f_{CK2}/192$
1	0	1	$f_{osc}/1152$	$f_{CK1}/1152$	$f_{CK2}/144$
1	1	0	$f_{osc}/768$	$f_{CK1}/768$	$f_{CK2}/96$

Note : When is setting (FC0,FC1,FC2)=(1,1,1), the frame frequency is same as frame frequency at the time of the (FC0,FC1,FC2)=(0,1,0) setting ( $f_{osc}/3072$ ,  $f_{CK1}/3072$ ,  $f_{CK2}/384$ ).

However, in the case of the simple mode transfer, the frame frequency of the common and segment output waveforms is set as following by the control data FC.

Control data	Common/segment output waveform frame frequency fo[Hz]	
FC	Internal oscillator operating mode (The control data OC is 0, $f_{osc}=300[\text{kHz}]$ typ)	External clock operating mode (The control data OC is 1 $f_{CK1}=300[\text{kHz}]$ typ)
0	$f_{osc}/3072$	$f_{CK1}/3072$
1	$f_{osc}/1536$	$f_{CK1}/1536$

## LC75809PT

(4) OC ... Internal oscillator operating mode/external clock operating mode switching control data

This control data bit selects either the internal oscillator operating mode or external clock operating mode.

OC	Fundamental clock operating mode	I/O pin (S89/OSCI) state
0	Internal oscillator operating mode	S89
1	External clock operating mode	OSCI

Note : S89 : Segment output

OSCI : External clock input

(5) CT0 to CT2 ... Display contrast setting control data

These control data bits set display contrast.

CT0 to CT2 : Sets the display contrast (7 steps)

CT0	CT1	CT2	LCD drive 3/3 bias voltage $V_{DD0}$ level
0	0	0	$1.00V_{DD}=V_{DD}-(0.05V_{DD}\times 0)$
1	0	0	$0.95V_{DD}=V_{DD}-(0.05V_{DD}\times 1)$
0	1	0	$0.90V_{DD}=V_{DD}-(0.05V_{DD}\times 2)$
1	1	0	$0.85V_{DD}=V_{DD}-(0.05V_{DD}\times 3)$
0	0	1	$0.80V_{DD}=V_{DD}-(0.05V_{DD}\times 4)$
1	0	1	$0.75V_{DD}=V_{DD}-(0.05V_{DD}\times 5)$
0	1	1	$0.70V_{DD}=V_{DD}-(0.05V_{DD}\times 6)$

Note : When is setting (CT0,CT1,CT2)=(1,1,1), the LCD drive 3/3 bias voltage  $V_{DD0}$  level is  $1.00V_{DD}$ .

Note that although the display contrast can be adjusted by operating the built-in display contrast adjustment circuit, it can also be adjusted by modifying the supply pin  $V_{DD}$  voltage level.

(6) P0 to P3 ... Segment output port/general-purpose output port switching control data

These control data bits switch the segment output port/general-purpose output port functions of the S1/P1 to S12/P12 output pins.

Control data				Output pin state											
P0	P1	P2	P3	S1/P1	S2/P2	S3/P3	S4/P4	S5/P5	S6/P6	S7/P7	S8/P8	S9/P9	S10/P10	S11/P11	S12/P12
0	0	0	0	S1	S2	S3	S4	S5	S6	S7	S8	S9	S10	S11	S12
0	0	0	1	P1	S2	S3	S4	S5	S6	S7	S8	S9	S10	S11	S12
0	0	1	0	P1	P2	S3	S4	S5	S6	S7	S8	S9	S10	S11	S12
0	0	1	1	P1	P2	P3	S4	S5	S6	S7	S8	S9	S10	S11	S12
0	1	0	0	P1	P2	P3	P4	S5	S6	S7	S8	S9	S10	S11	S12
0	1	0	1	P1	P2	P3	P4	P5	S6	S7	S8	S9	S10	S11	S12
0	1	1	0	P1	P2	P3	P4	P5	P6	S7	S8	S9	S10	S11	S12
0	1	1	1	P1	P2	P3	P4	P5	P6	P7	S8	S9	S10	S11	S12
1	0	0	0	P1	P2	P3	P4	P5	P6	P7	P8	S9	S10	S11	S12
1	0	0	1	P1	P2	P3	P4	P5	P6	P7	P8	P9	S10	S11	S12
1	0	1	0	P1	P2	P3	P4	P5	P6	P7	P8	P9	P10	S11	S12
1	0	1	1	P1	P2	P3	P4	P5	P6	P7	P8	P9	P10	P11	S12
1	1	0	0	P1	P2	P3	P4	P5	P6	P7	P8	P9	P10	P11	P12

Note1 : Sn(n=1 to 12) : Segment output ports

Pn(n=1 to 12) : General-purpose output ports

Note2 : When are setting (P0,P1,P2,P3)=(1,1,0,1), (1,1,1,0), and (1,1,1,1), the all P1/S1 to P12/S12 output pins selects the segment output port.

## LC75809PT

The table below lists the correspondence between the display data and the output pins when these pins are selected to be general-purpose output ports (general-purpose output function).

Output pin	Correspondence display data	
	1/4 duty	1/3 duty
S1/P1	D1	D1
S2/P2	D5	D4
S3/P3	D9	D7
S4/P4	D13	D10
S5/P5	D17	D13
S6/P6	D21	D16
S7/P7	D25	D19
S8/P8	D29	D22
S9/P9	D33	D25
S10/P10	D37	D28
S11/P11	D41	D31
S12/P12	D45	D34

For example, if the circuit is operated in 1/4 duty and the S4/P4 output pin is selected to be a general-purpose output port and is set general-purpose output function, the S4/P4 output pin will output a high ( $V_{DD}$ ) level when the display data D13 is 1, and will output a low ( $V_{SS}$ ) level when D13 is 0.

(7) DT ... 1/4-duty 1/3-bias drive or 1/3-duty 1/3-bias drive switching control data

This control data bit selects either 1/4-duty 1/3-bias drive or 1/3-duty 1/3-bias drive.

DT	Drive scheme	The COM4/S87 pin state
0	1/4-duty 1/3-bias drive	COM4
1	1/3-duty 1/3-bias drive	S87

Note : COM4 : Common output

S87 : Segment output

(8) DN ... S88 pin and S89/OSCI pin state setting control data

This control data bit sets state of the S88 pin and the S89/OSCI pin.

DN	Number of display segments		Pin state	
	1/4 duty	1/3 duty	S88	S89/OSCI
0	Up to 344 segments	Up to 261 segments	"L"( $V_{SS}$ )	"L"( $V_{SS}$ )/OSCI
1	Up to 352 segments	Up to 267 segments	S88	S89/OSCI

Note : "L" ( $V_{SS}$ ) : Low ( $V_{SS}$ ) level output

S88 : Segment output

"L" ( $V_{SS}$ )/OSCI : Low ( $V_{SS}$ ) level output in internal oscillator operating mode (OC=0)  
External clock input in external clock operating mode (OC=1)

S89/OSCI : Segment output in internal oscillator operating mode (OC=0)

External clock input in external clock operating mode (OC=1)

(9) EXF ... External clock operating frequency setting control data

This control data bit sets the operating frequency of the external clock which input into the OSCI pin, when the external clock operating mode (OC="1") is set. However, be careful of setting the  $f_{CK1}=300[\text{kHz}]$  typ when the external clock operating mode (OC="1") is set in the case of the simple mode transfer forcibly. In addition, this data is effective only when external clock operating mode (OC="1") is set.

EXF	External clock operating frequency $f_{CK}[\text{kHz}]$
0	$f_{CK1}=300[\text{kHz}]$ typ
1	$f_{CK2}=38[\text{kHz}]$ typ

## LC75809PT

### (10) SC ... Segment on/off control data

This control data bit controls the on/off state of the segments.

SC	Display state
0	On
1	Off

Note that when the segments are turned off by setting SC to 1, the segments are turned off by outputting segment off waveforms from the segment output pins.

### (11) BU ... Normal mode/power-saving mode control data

This control data bit selects either normal mode or power-saving mode.

BU	Mode
0	Normal mode
1	Power saving mode ( In this mode, the internal oscillator circuit stops oscillation (the S89/OSCI pin is configured for segment output) if the IC is in the internal oscillator operating mode (OC=0) and the IC stops receiving external clock signals (the S89/OSCI pin is configured for external clock input) if the IC is in the external clock operating mode (OC=1). The common and segment output pins go to the $V_{SS}$ level. However, the S1/P1 to S12/P12 output pins can be used as general-purpose output ports under the control of the data bits P0 to P3. (The general-purpose output port P1 to P12 can not be used as PWM output or clock output).

## LC75809PT

(12) W10 to W15, W20 to W25, W30 to W35, W40 to W45, W50 to W55, W60 to W65 ... PWM data of the PWM output  
 These control data bits set the pulse width of the PWM output P1 to P12. However, when the PWM output function isn't used, these control data bits become invalid. In addition, when the external clock operating frequency is set the  $f_{CK2}=38[\text{kHz}]_{\text{typ}}$  (EXF="1") in external clock operating mode (OC="1") or when the serial data transfer is the simple mode transfer, these control data bits become invalid.

Wn0	Wn1	Wn2	Wn3	Wn4	Wn5	Pulse width of PWM output

## LC75809PT

---

For example, the table below lists the output states for the S21 output pin.

Display data			Output pin (S21) state
D61	D62	D63	
0	0	0	The LCD segments corresponding to COM1, COM2, and COM3 are off.
0	0	1	The LCD segment corresponding to COM3 is on.
0	1	0	The LCD segment corresponding to COM2 is on.
0	1	1	The LCD segment corresponding to COM2 and COM3 are on.
1	0	0	The LCD segment corresponding to COM1 is on.
1	0	1	The LCD segment corresponding to COM1 and COM3 are on.
1	1	0	The LCD segment corresponding to COM1 and COM2 are on.
1	1	1	The LCD segments corresponding to COM1, COM2, and COM3 are on.

# LC75809PT

## Output waveforms (1/4-Duty 1/3-Bias Drive Scheme)

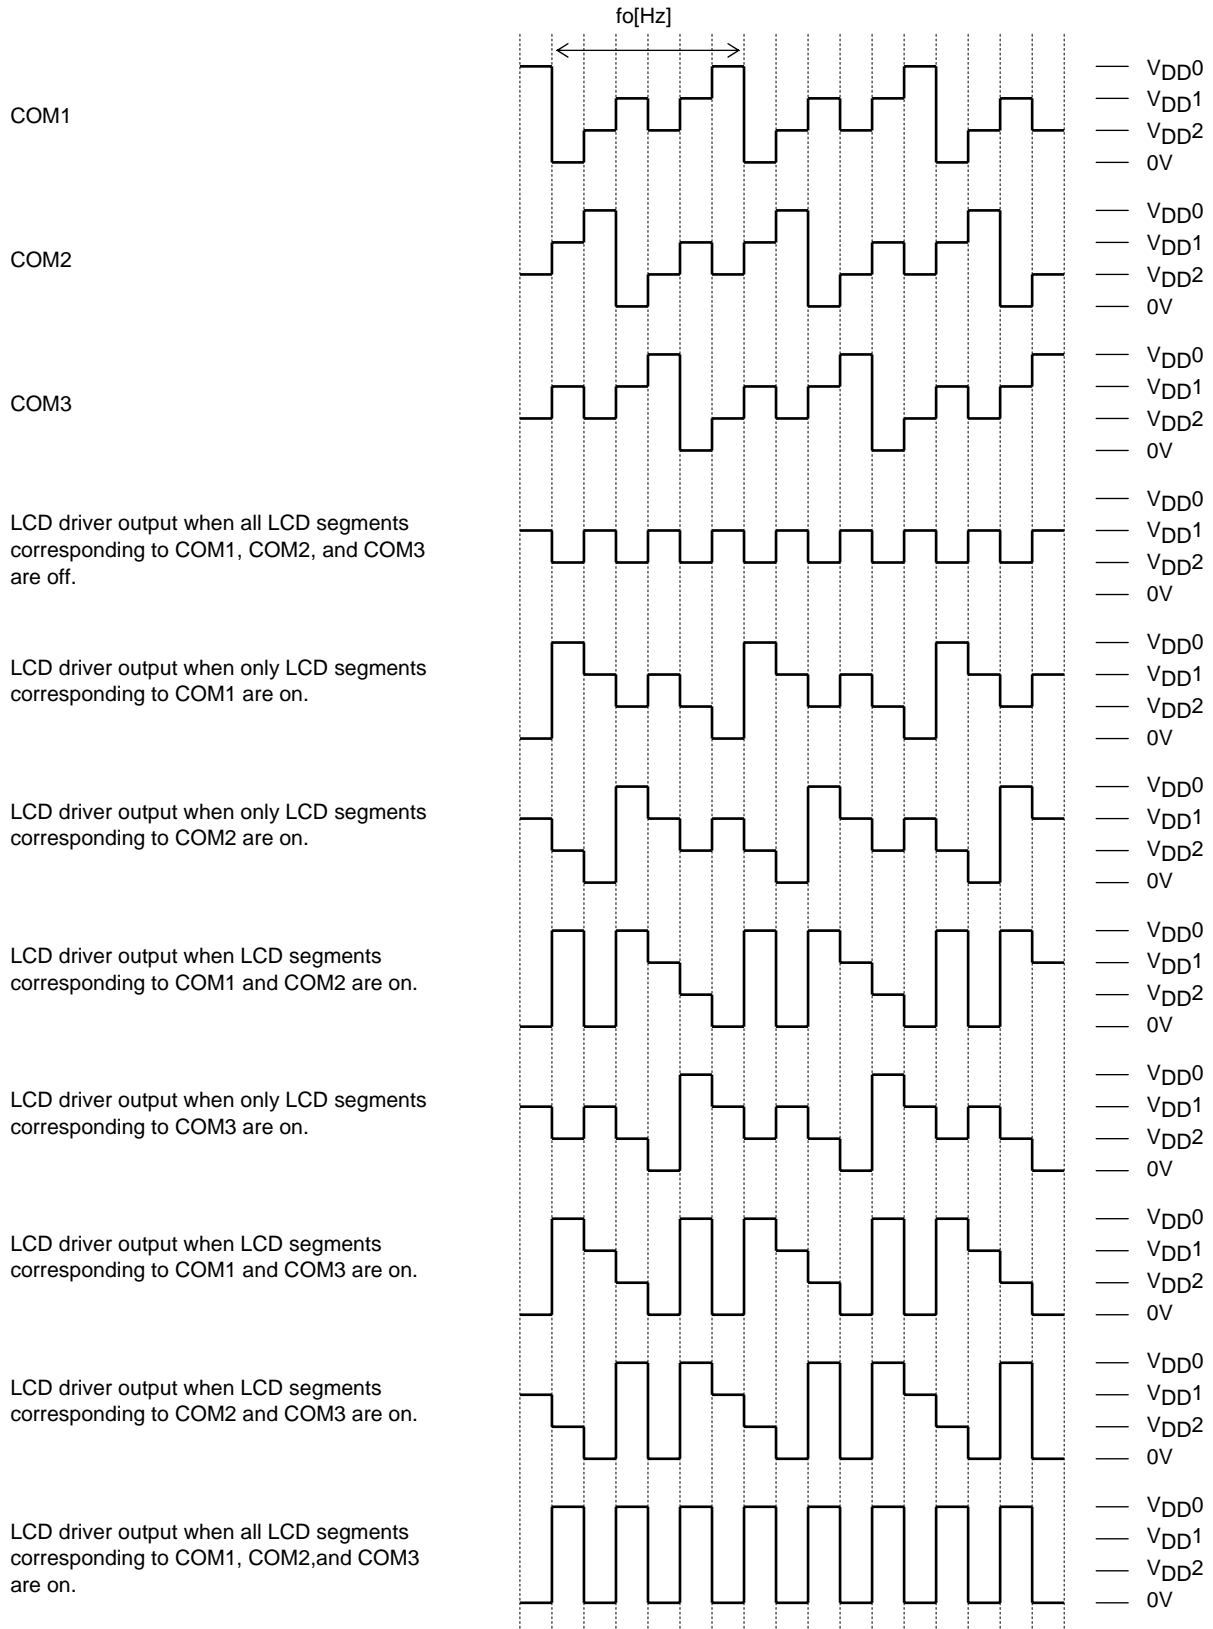

## LC75809PT

Control data			Common/segment output waveform frame frequency fo[Hz]		
FC0	FC1	FC2	Internal oscillator operating mode (The control data OC is 0, fosc=300[kHz] typ)	External clock operating mode (The control data OC is 1 and EXF is 0, f <sub>CK1</sub> =300[kHz] typ)	External clock operating mode (The control data OC is 1 and EXF is 1, f <sub>CK2</sub> =38[kHz] typ)
0	0	0	fosc/6144	f <sub>CK1</sub> /6144	f <sub>CK2</sub> /768
0	0	1	fosc/4608	f <sub>CK1</sub> /4608	f <sub>CK2</sub> /576
0	1	0	fosc/3072	f <sub>CK1</sub> /3072	f <sub>CK2</sub> /384
0	1	1	fosc/2304	f <sub>CK1</sub> /2304	f <sub>CK2</sub> /288
1	0	0	fosc/1536	f <sub>CK1</sub> /1536	f <sub>CK2</sub> /192
1	0	1	fosc/1152	f <sub>CK1</sub> /1152	f <sub>CK2</sub> /144
1	1	0	fosc/768	f <sub>CK1</sub> /768	f <sub>CK2</sub> /96

Note : When is setting (FC0,FC1,FC2)=(1,1,1), the frame frequency is same as frame frequency at the time of the (FC0,FC1,FC2)=(0,1,0) setting (fosc/3072, f<sub>CK1</sub>/3072, f<sub>CK2</sub>/384).

In addition, if the serial data transfer is the simple mode transfer, the frame frequency is set the fosc/3072 or f<sub>CK1</sub>/3072 when the control data FC is 0, and is set the fosc/1536 or f<sub>CK1</sub>/1536 when FC is 1.

Output waveforms (1/3-Duty 1/3-Bias Drive Scheme)

## LC75809PT

Control data			Common/segment output waveform frame frequency fo[Hz]		
FC0	FC1	FC2	Internal oscillator operating mode (The control data OC is 0, fosc=300[kHz] typ)	External clock operating mode (The control data OC is 1 and EXF is 0, f <sub>CK1</sub> =300[kHz] typ)	External clock operating mode (The control data OC is 1 and EXF is 1, f <sub>CK2</sub> =38[kHz] typ)
0	0	0	fosc/6144	f <sub>CK1</sub> /6144	f <sub>CK2</sub> /768
0	0	1	fosc/4608	f <sub>CK1</sub> /4608	f <sub>CK2</sub> /576
0	1	0	fosc/3072	f <sub>CK1</sub> /3072	f <sub>CK2</sub> /384
0	1	1	fosc/2304	f <sub>CK1</sub> /2304	f <sub>CK2</sub> /288
1	0	0	fosc/1536	f <sub>CK1</sub> /1536	f <sub>CK2</sub> /192
1	0	1	fosc/1152	f <sub>CK1</sub> /1152	f <sub>CK2</sub> /144
1	1	0	fosc/768	f <sub>CK1</sub> /768	f <sub>CK2</sub> /96

Note : When is setting (FC0,FC1,FC2)=(1,1,1), the frame frequency is same as frame frequency at the time of the (FC0,FC1,FC2)=(0,1,0) setting (fosc/3072, f<sub>CK1</sub>/3072, f<sub>CK2</sub>/384).

In addition, if the serial data transfer is the simple mode transfer, the frame frequency is set the fosc/3072 or f<sub>CK1</sub>/3072 when the control data FC is 0, and is set the fosc/1536 or f<sub>CK1</sub>/1536 when FC is 1.

PWM output waveforms

0	1	0	1	fosc/256	fCK1/256

Note: When is setting (PF0,PF1,PF2,PF3)=(1,1,0,1) and (X,X,1,1), the frame frequency is same as frame frequency at the time of the (PF0,PF1,PF2,PF3)=(1,0,1,0) setting (fosc/896, fCK1/896). X: don't care

### Clock output waveforms

Control data				Clock frequency of clock output P1 fc(=1/Tc)[Hz]
P1A	P1B	P1C	P1D	
1	1	1	0	Clock output function (fosc/2, fCK/2)
0	0	0	1	Clock output function (fosc/8, fCK/8)

Display Control and the  $\overline{\text{INH}}$  Pin

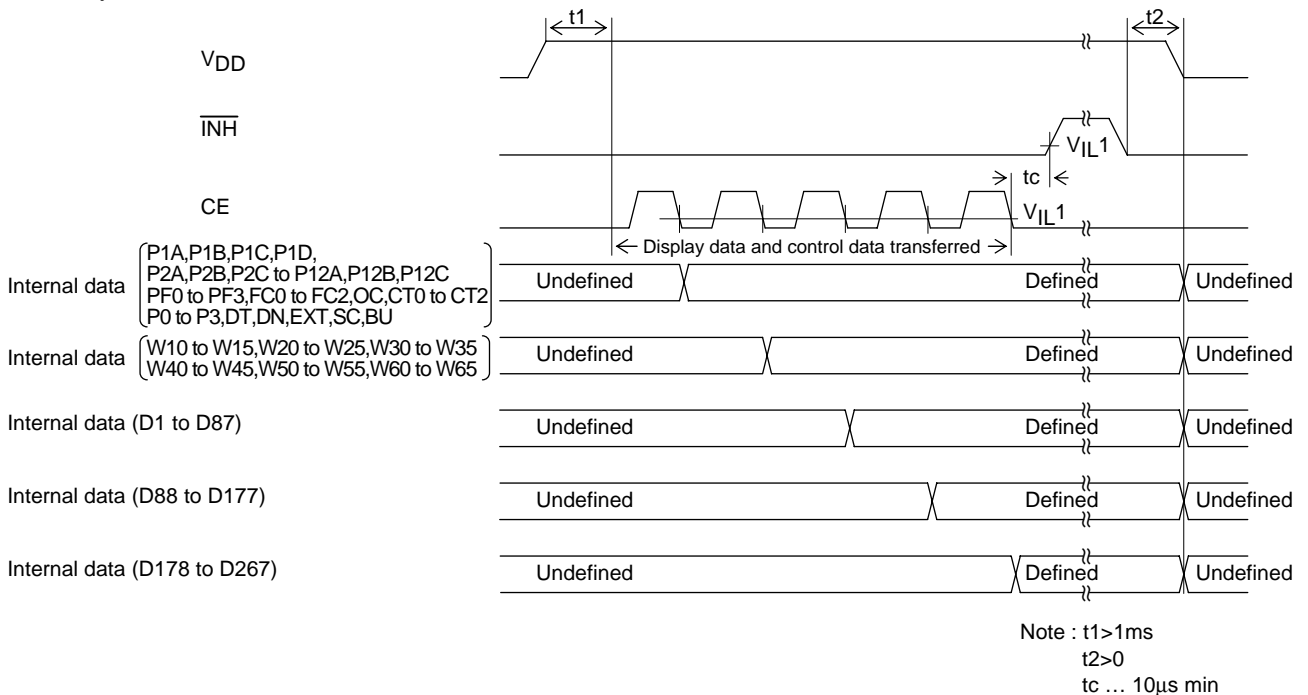

Since the LSI internal data (1/4 duty : the display data D1 to D352 and the control data, 1/3 duty : the display data D1 to D267 and the control data) is undefined when power is first applied, applications should set the  $\overline{\text{INH}}$  pin low at the same time as power is applied to turn off the display (This sets the S1/P1 to S12/P12, S13 to S86, COM1 to COM3, COM4/S87, S88, and S89/OSCI pins to the  $V_{SS}$  level.) and during this period send serial data from the controller. The controller should then set the  $\overline{\text{INH}}$  pin high after the data transfer has completed. This procedure prevents meaningless display at power on. (See Figure 5, Figure 6, Figure 7 and Figure 8.)

(1) 1/4 duty

[Figure 5]

(2) 1/3 duty

[Figure 6]

# LC75809PT

## (3) 1/4 duty (Simple mode transfer)

[Figure 7]

## (4) 1/3 duty (Simple mode transfer)

[Figure 8]

## Notes on Controller Transfer of Display Data

When using the LC75809PT in 1/4 duty, applications transfer the display data (D1 to D352) in four operations, and in 1/3 duty, they transfer the display data (D1 to D267) in three operations. In either case, applications should transfer all of the display data within 30 ms to maintain the quality of displayed image.

## S89/OSCI Pin Peripheral Circuit

(1) Internal oscillator operating mode (control data OC=0)

Connect the S89/OSCI pin to the LCD panel when the internal oscillator operating mode is selected.

(2) External clock operating mode (control data OC=1)

When the external clock operating mode is selected, insert a current protection resistor  $R_g$  (2.2 to 22k $\Omega$ ) between the S89/OSCI pin and external clock output pin (external oscillator). Determine the value of the resistance according to the allowable current value at the external clock output pin. Also make sure that the waveform of the external clock is not heavily distorted.

Note : Allowable current value at external clock output pin  $> \frac{V_{DD}}{R_g}$

(3) Unused pin treatment

When the S89/OSCI pin is not to be used, select the internal oscillator operating mode (setting control data OC to 0) to keep the pin open.

## P1 to P12 Pin Peripheral Circuit

It is recommended the circuit shown below be used to adjust the brightness of the LED backlight using the PWM output P1 to P12

# LC75809PT

## Sample Application Circuit 1

1/4 Duty, 1/3Bias

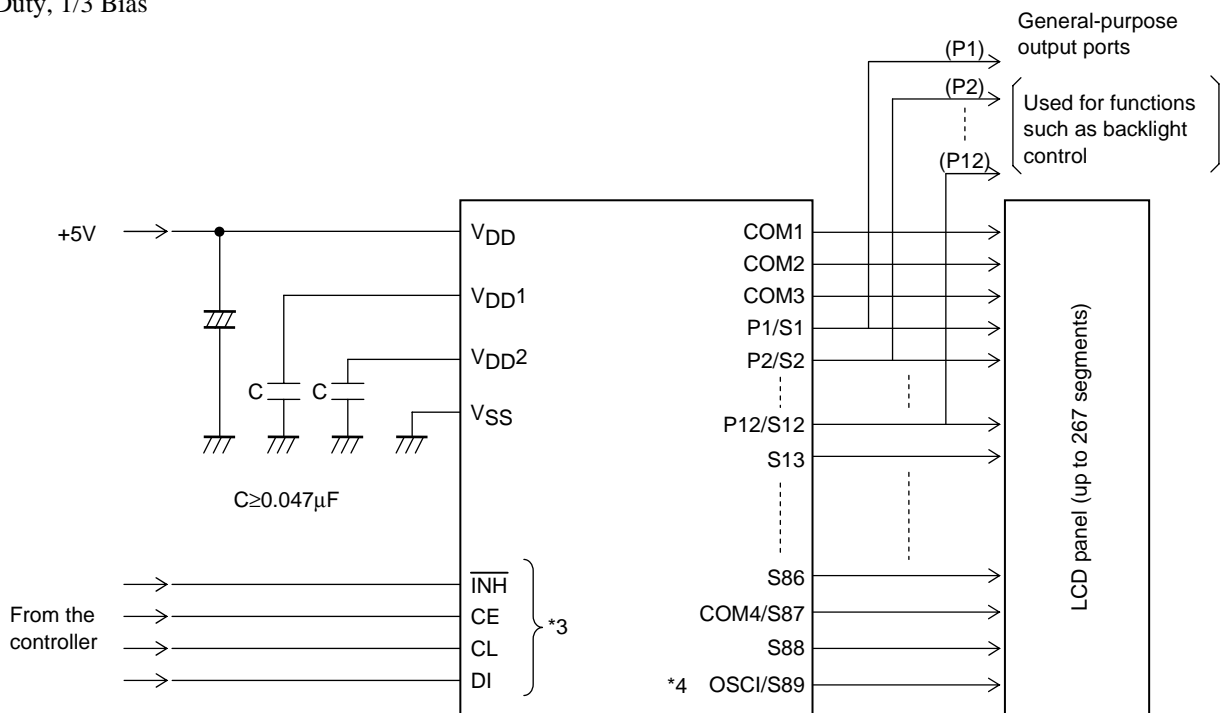

\*3 The pins to be connected to the controller (CE, CL, DI,  $\overline{\text{INH}}$ ) can handle 3.3V or 5V.

\*4 Connect the S89/OSCI pin to the LCD panel in the internal oscillator operating mode and insert a current protection resistor  $R_g$  (2.2 to 22k $\Omega$ ) between the S89/OSCI pin and external clock output pin (external oscillator) in the external clock operating mode (see "S89/OSCI Pin Peripheral Circuit")

## Sample Application Circuit 2

1/3 Duty, 1/3 Bias

\*3 The pins to be connected to the controller (CE, CL, DI,  $\overline{\text{INH}}$ ) can handle 3.3V or 5V.

\*4 Connect the S89/OSCI pin to the LCD panel in the internal oscillator operating mode and insert a current protection resistor  $R_g$  (2.2 to 22k $\Omega$ ) between the S89/OSCI pin and external clock output pin (external oscillator) in the external clock operating mode (see "S89/OSCI Pin Peripheral Circuit")
