## Miniature Basic Switch

### Highly reliable Miniature Basic Switch in spite of its Ultra-low Load action

- Twin crossbar contact employed for exceptionally high contact reliability.
- Unique internal mechanism that ensures high contact reliability even in micro load operations. Applicable for detection of light objects.

RoHS Compliant

30 VDC		1A	0.1A

## Characteristics

Item	Model	D2MV-1 models	D2MV-01 models
Permissible operating speed		1 mm to 1 m/s (for pin plunger models)	
Permissible operating frequency	Mechanical	300 operations/min (for pin plunger models)	
	Electrical	60 operations/min	
Insulation resistance		100MΩ min. (at 500 VDC with insulation tester)	
Contact resistance (initial value)		30 mΩ max.	50 mΩ max.
Dielectric strength * 1	Between terminals of the same polarity	1,000 VAC 50/60 Hz 1min	
	Between current-carrying metal parts and ground	1,500 VAC 50/60 Hz 1min	
	Between each terminal and non-current-carrying metal parts	1,500 VAC 50/60 Hz 1min	
Vibration resistance * 2	Malfunction	10 to 55 Hz, 1.5 mm double amplitude	
Shock resistance	Durability	Models with OF of 0.10N	150 m/s <sup>2</sup> (approx. 15G) max.
		Models with OF between 0.25 to 0.49N	400 m/s <sup>2</sup> (approx. 40G) max.
	Malfunction * 2	100 m/s <sup>2</sup> (approx. 10G) max.	
Durability * 3	Mechanical	10,000,000 operations min. (60 operations/min)	
	Electrical	500,000 operations min. (30 operations/min)	1,000,000 operations min. (30 operations/min)
Degree of protection		IEC IP40	
Ambient operating temperature		-25°C to +80°C (at ambient humidity of 60% max.) (with no icing or condensation)	
Ambient operating humidity		85% max. (for +5°C to +35°C)	
Weight		Approx. 6g (pin plunger models)	

Note. The data given above are initial values.

- \*1. The values for dielectric strength shown are for models with a Separator (refer to "Micro Switch Common Accessories").
- \*2. The values are at Free Position and Total Travel Position values for pin plunger, and Total Travel Position value for lever. Close or open circuit of the contact is 1ms max.

## Precautions

★Please refer to "Basic Switches Common Precautions" for correct use.

### Cautions

#### ●Handling

Do not apply excessive shock. Doing so may cause damage to the Switch's internal components because they designed for a small load.

#### ●Soldering

- Terminal connections

Complete the soldering at the iron tip temperature between 250 to 350°C (60W) within 5 seconds, and do not apply any external force for 1 minute after soldering.

Apply minimum amount of flux required. It may result in contact failure once the flux penetrates into the internal part of the Switch.

### Correct Use

#### ●Mounting

Use M3 mounting screw with plane washers or spring washers to securely mount the Switch. Tighten the screws to a torque of 0.39 to 0.59 N·m {4 to 6 kgf·cm}.

#### ●Mounting Direction

For a Switch with an actuator, mount the Switch in a direction where the actuator weight will not be applied to the Switch. Since the Switch is designed for a low operating force, its release force is low. Therefore, release failure may occur if unnecessary force is applied to the Switch.

#### ●Using Micro Loads

Using a model for ordinary loads to open or close the contact of a micro load circuit may result in faulty contact. Use models that operate in the following range. However, even when using micro load models within the following operating range, if inrush current occurs when the contact is opened or closed, it may increase the contact wear and so decrease durability. Therefore, insert a contact protection circuit where necessary. The minimum applicable load is the N-level reference value. This value indicates the malfunction reference level for the reliability level of 60% ( $\lambda_{60}$ ).

(JIS C5003)

The equation,  $\lambda_{60}=0.5 \times 10^{-6} / \text{operations}$  indicates that the estimated malfunction rate is less than  $\frac{1}{2,000,000}$  operations with a reliability level of 60%.

- Application examples provided in this document are for reference only. In actual applications, confirm equipment functions and safety before using the product.
- Consult your OMRON representative before using the product under conditions which are not described in the manual or applying the product to nuclear control systems, railroad systems, aviation systems, vehicles, combustion systems, medical equipment, amusement machines, safety equipment, and other systems or equipment that may have a serious influence on lives and property if used improperly. Make sure that the ratings and performance characteristics of the product provide a margin of safety for the system or equipment, and be sure to provide the system or equipment with double safety mechanisms.
