## - Contact Specifications

| Item | Specification |
| :--- | :--- |
| Specification | Rivet |
| Material | Silver |
| Gap (standard value) | 0.3 mm |
| Minimum applicable load (see note) | 1 mA at 5 VDC |

Note: Minimum applicable loads are indicated by N standard reference values. This value represents the failure rate at a $60 \%\left(\lambda_{60}\right)$ reliability level (JIS C5003).
The equation $\lambda_{60}=0.5 \times 10^{-6 /}$ operations indicates that a failure rate of $1 / 2,000,000$ operations can be expected at a reliability level of $60 \%$.

## Precautions

Refer to General Information.
Be sure to read the precautions and information common to all Snap Action and Detection Switches, contained in the Technical User's Guide, "Snap Action Switches, Technical Information" for correct use.

## - Correct Use

## Mounting

This product does not have a waterproof or drip-proof construction. Ensure that water does not enter the switch interior. In particular, do not use the switch in locations where water may be spilled or flow over the switch. Doing so may result in deterioration of the insulation.

## Wiring

Do not use the switch with a large force applied to the connector or lead wire. Doing so may result in rattling or contact failure.

## Storage Environment

Storing the switch in a plastic bag will help prevent discoloration due to sulfuration of the (silver-plated) terminals.
Do not use the switch in locations subject to harmful gases or to high temperatures or humidity levels. Depending on the location, it is recommended that Switches are inspected between 3 and 6 months after the date of manufacturer.

## Using Micro Loads

Using a model for ordinary loads to switch microloads may result in faulty operation. Instead, use the models that are designed for microloads and that operate in the following range.

However, even when using microload models within the operating range shown above, if inrush current or inductive voltage spikes occur when the contact is opened or closed, then contact wear may increase and decrease the service life. Therefore, insert a contact protection circuit where necessary.

## Cautions

## Handling

Do not expose the switch to shocks, such as by dropping it. Doing so may damage or deform the switch.
Do not apply lubrication to the sliding parts, such as pushbuttons or actuators. Doing so may result in faulty operation or contact failure.
In order to ensure stable contact force for contacts, actuate beyond the recommended operating point and release to free position.
