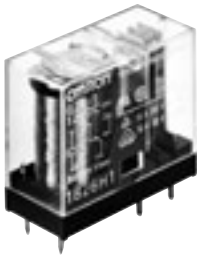
G2R
PCB Power Relay

The Best Seller G2R

- 1General purpose power Relays of single-pole10 A and double-pole 5 A.
- Safety-oriented design with dielectric strength of 5,000 V between coil and contacts, and surge resistance of 10,000 V.
- AC and DC types are both available for operational coils.

RoHS Compliant



■Model Number Legend

G2R-□-□□□□-□□

1. Relay Function
None: Single-side stable
K : Double-winding latching

2. Number of poles
1: 1-pole
2: 2-pole

3. Contact Form
None: NO/NC
A : NO

4. Contact Type
None: Single
Z : Bifurcated contact

5. Enclosure rating
None: Flux protection (T-type is an enclosed relay)
4 : Fully sealed

6. Terminal Shape
None: PCB terminals
T : Quick-connect (upper bracket mounting #187)

7. Classification
None: Standard
E : High-capacity
H : High-sensitivity
U : For ultrasonically cleanable
Z : Full-wave rectifier

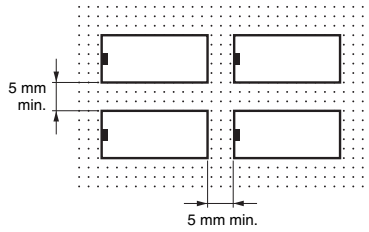
■Precautions

●Please refer to "PCB Relays Common Precautions" for correct use.

Correct Use

●Mounting

• When mounting a number of relays on a PCB, be sure to provide a minimum mounting space of 5 mm between the two juxtaposed relays as shown below.



●Handling

• The terminals are compatible with Faston receptacle #187 and are suitable for positive-lock mounting. Use only Faston terminals with the specified numbers.
Select leads for connecting Faston receptacles with wire diameters that are within the allowable range for the load current.
Do not apply excessive force to the terminals when mounting or dismounting the Faston receptacle. Also, do not insert terminals at an angle, or insert/remove multiple terminals at the same time. Be sure to insert and remove terminals carefully one at a time.
Refer to the following table for examples of positive-lock connectors made by AMP. Contact the manufacturer directly for details on connectors including availability.

Type	Receptacle terminals	Positive housing
#187 (Width 4.75)	AMP170330-1 (170324-1) AMP170331-1 (170325-1) AMP170332-1 (170326-1)	AMP172074-1 (natural color) AMP172074-4 (yellow) AMP172074-5 (green) AMP172074-6 (blue)

Note: The numbers shown in parentheses are for air-feeding.

●Minimum Pulse Width of Double-winding Latching Relays

• The minimum pulse width shown in the table of characteristics are values measured under conditions of ambient temperature at 23°C with rated operating voltage imposed on coil. The Relay may not provide a satisfactory performance as its holding ability decreases depending on the operating circuit conditions and ambient temperature, or decreases due to degradation over time.
In actual operation, impose to the coil a rated operating voltage with a pulse width that is suitable to the actual load, and reset the setting at least once a year, to correspond to the degradation over time.

• When using the Relay in a strong magnetic field environment, the magnetic body may be demagnetized due to the influence of environment, causing the Relay to malfunction. Therefore, do not use the Relay in a strong magnetic field environment.

●Degradation over Time of Double-winding Latching Relays Holding Ability

• If a double-winding latching Relay is used left set for an extended period, changes over time will degrade the magnetic force, and the reduction in holding ability may cause the set status to be released. This is also because of the properties of semi-hard magnetic material, and the rate of degradation over time depends on the ambient environment (e.g., temperature, humidity, vibration, and presence or absence of external magnetic fields).Perform maintenance at least once a year by resetting, applying the rated voltage again, and then setting.

●Wiring High Capacity (-E) Models

• High-capacity models (-E) have a structure that connects two terminals from one contact.
When designing the circuit, use both terminals.
If you use only one terminal, the relay may be unable to satisfy specified performance.
