

## Slim type safety relays

# SF RELAYS

### Slim type

RoHS compliant

### FEATURES

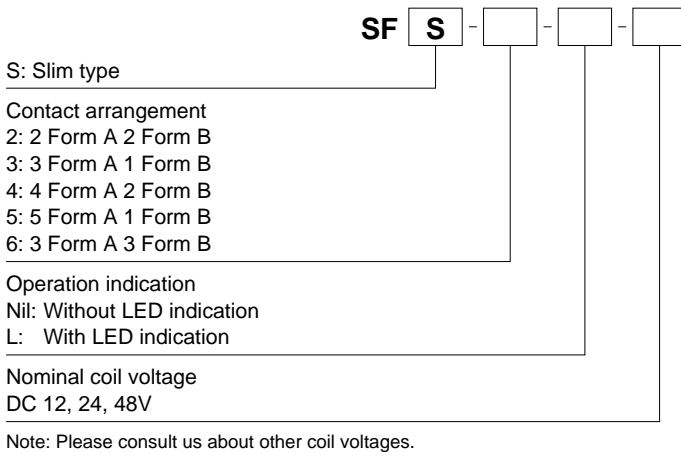

- 1. Forcibly guided contact structure**  
(EN50205 ClassA TÜV recognized)
- 2. Slim profile (mm inch)**  
Compact size with slim profile relay reduces substrate size.  
[4-poles type] 40 (L)×13 (W)×24 (H)  
1.575 (L)×.512 (W)×.945 (H)  
[6-poles type] 50 (L)×13 (W)×24 (H)  
1.969 (L)×.512 (W)×.945 (H)
- 3. Built-in LED indication type available**  
Built-in LED eliminates need for design and mounting of separate LED circuit. This cuts costs and saves labor.

- 4. Fast response time is achieved (8 ms or less).**  
Circuit is quickly opened to ensure safety.
- 5. Sockets and terminal sockets are available.**

### TYPICAL APPLICATIONS

1. Machine tools
2. Robots
3. Safety PLCs
4. Circuits with stringent safety standard requirements such as those in motor vehicle production equipment.

	Max. Operating speed	20 times/min. (at max. rating)			
Unit weight		Approx. 20 g .71 oz	Approx. 23 g .81 oz		

Notes: \*1. This value can change due to the switching frequency, environmental conditions, and desired reliability level, therefore it is recommended to check this with the actual load.

\*2. Response time is the time after the coil voltage turns off until the time when "a" contact turns off.

\*3. The upper limit of the ambient temperature is the maximum temperature that can satisfy the coil temperature rise value. Refer to Usage, transport and storage conditions in NOTES.

REFERENCE DATA

1. Operate/response/release time

Tested sample: SFS4-DC24V (4 Form A/2 Form B), 20pcs. (a contacts: 80, b contacts: 40)

2. Coil temperature rise

Tested sample: SFS4-DC24V (4 Form A/2 Form B), 3pcs.  
Measured portion: Inside the coil  
Ambient temperature: Room temperature  
(27°C 80.6°F), 70°C 158°F, 85°C 185°F

3. Malfunctional shock

Tested sample: SFS4-DC24V (4 Form A/2 Form B), 3pcs.

Other contact gaps when contacts are welded

Sample: SFS4-DC24V (4 Form A/2 Form B)

The table below shows the state of the other contacts.

In case of form "NO" contact weld the coil applied voltage is 0 V.

In case of form "NC" contact weld the coil applied voltage is nominal.

		State of other contacts					
		3-4 (NC)	5-6 (NC)	7-8 (NO)	9-10 (NO)	11-12 (NO)	13-14 (NO)
Welded contact No.	3-4 (NC)			>0.5	>0.5	>0.5	>0.5
	5-6 (NC)			>0.5	>0.5	>0.5	>0.5
	7-8 (NO)	>0.5	>0.5				
	9-10 (NO)	>0.5	>0.5				
	11-12 (NO)	>0.5	>0.5				
	13-14 (NO)	>0.5	>0.5				

>0.5: contact gap is kept at min. 0.5 mm .020inch

Empty cells: either ON or OFF

Note: Contact gaps are shown at the initial state.

If the contact transfer is caused by load switching, it is necessary to check the actual loading.

## NOTES

**1. Coil operating power**

Pure DC current should be applied to the coil. The wave form should be rectangular. If it includes ripple, the ripple factor should be less than 5%. However, check it with the actual circuit since the characteristics may be slightly different.

**2. Coil connection**

When connecting coils, refer to the wiring diagram to prevent mis-operation or malfunction.

**3. Cleaning**

This relay is not sealed, therefore, immersion may cause failure. Be careful that flux does not overflow onto the PC board or penetrate inside the relay.

**4. Soldering**

When using automatic soldering, the following conditions are recommended

- 1) Preheating: 120°C 248°F, within 120 Sec (PC board solder surface)
- 2) Soldering: 260°C±5°C 500°F±41°F, within 6 Sec

**5. Installation**

1) Attach directly to the chassis or use a DIN rail.

(1) When attaching directly to chassis

- Use a M3.5 screw, spring washer, and hex nut.
- For the mounting pitch, refer to the dimensions.

(2) When installing on a DIN rail

- Use a 35 mm 1.378 inch wide DIN rail (DIN46277).
- Install and remove as shown in the figures below.

<When installing>

<When removing>

2) Refer to the figure below for applicable wire-pressed terminals.

(You cannot use round type wire-pressed terminals.)

**6. Other**

1) If the relay has been dropped, the appearance and characteristics should always be checked before use.

2) The switching lifetime is defined under the standard test condition specified in the JIS\* C 5442-1996 standard (temperature 15 to 35°C 59 to 95°F, humidity 25 to 75%). Check this with the actual product as it is affected by the coil driving circuit, load type, activation frequency, activation phase, ambient conditions and other factors.

Also, be especially careful with loads such as those listed below.

(1) When used for AC load-operation and the operating phase is synchronous. Rocking and fusing can easily occur due to contact shifting.

(2) During high frequency on/off operation with certain loads, arcing may occur at the contacts. This can cause fusion to Oxygen and Nitrogen gas in the air creating Nitric Acid (HNO<sub>3</sub>) which can cause corrosion to the contacts. Please see the following countermeasure examples:

1. Incorporate an arc-extinguishing circuit.
2. Lower the operating frequency
3. Lower the ambient humidity

3) For secure operations, nominal coil voltage should be applied. In addition, please note that pick-up and drop-out voltage will vary according to the ambient temperature and operating conditions.

4) Heat, smoke, and/or fire may occur if the relay is used outside the allowable ranges for the coil ratings, contact ratings, operating cycle lifetime, and other specifications. Therefore, do not use the relay if these ratings are exceeded. Also, make sure that the relay is wired correctly.

5) Incorrect wiring may cause false operation or generate heat or flames.

6) Check the ambient conditions when storing or transporting the relays and devices containing the relays. Freezing or condensation may occur in the relay causing damage. Avoid exposing the relays to heavy loads, or strong shock and vibration.

**7. Usage, transport and storage conditions**

1) Ambient temperature, humidity, and atmospheric pressure during usage, transport, and storage of the relay:

(1) Temperature:

–40 to +85°C –40 to +185°F

(When the temperature is 70 to 80°C, reduce the 6 A max. switching current by 0.1 A/°C.)

(2) Humidity: 5 to 85% RH

(Avoid freezing and condensation.)

The humidity range varies with the temperature. Use within the range indicated in the graph below.

(3) Atmospheric pressure: 86 to 106 kPa  
Temperature and humidity range for usage, transport, and storage

2) Condensation

Condensation forms when there is a sudden change in temperature under high temperature and high humidity conditions. Condensation will cause deterioration of the relay insulation.

3) Freezing

Condensation or other moisture may freeze on the relay when the temperatures is lower than 0°C 32°F. This causes problems such as sticking of movable parts or operational time lags.

4) Low temperature and low humidity  
At low temperature, low humidity environments, the plastic becomes brittle. Please note corrections.

**8. Please connect DC coil types with LED and built-in diode correctly by verifying the coil polarity (“+” and “–”). Connecting with reverse polarity will cause the LED not to light and damage the built-in diode due to its specification.**

**For Cautions for Use.**
