FEATURES

1. **Approved to the supplementary insulation class in the EN standards (EN60950).**
   The insulation distance between the contact and coil meet the supplementary insulation class of the EN60950 standards as required for equipment connected to the telephone lines in Europe.
   Satisfies the following conditions:
   - Clearances: 2.0 mm .079 inch or more
   - Creepage distance: 2.5 mm .098 inch or more
2. **3,000 V breakdown voltage between contact and coil.**
3. **Nominal operating power: High sensitivity of 200mW**
4. **High contact capacity: 2 A 30 V DC**
5. **High contact reliability**
   High contact reliability is achieved by the use of gold-clad twin crossbar contacts, low-gas formation materials, mold sealing the coil section, and by controlling organic gas in the coil.
   ***We also offer a range of products with AgPd contacts suitable for use in low level load analog circuits (Max. 10V DC 10 mA).**

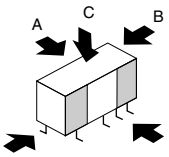
3) Ambient temperature when transporting and during storage with the product in its original packaging:
–40 to +70°C –40 to +158°F

2. Automatic insertion

To maintain the internal function of the relay, the chucking pressure should not exceed the values below.



Chucking pressure in the direction A:
4.9 N {500gf} or less
Chucking pressure in the direction B:
9.8 N {1 kgf} or less
Chucking pressure in the direction C:
9.8 N {1 kgf} or less
Please chuck the ▭ portion.
Avoid chucking the center of the relay.
In addition, excessive chucking pressure to the pinpoint of the relay should be avoided.

3. M.B.B. type

A small OFF time may be generated by the contact bounce during contact switching. Check the actual circuit carefully.

If the relay is dropped accidentally, check the appearance and characteristics including M.B.B. time before use.
