

**Relay for control panel of
1c 10A, 2c 5A and 1a 16A**

HN RELAYS (AHN)

RoHS compliant

FEATURES

- 1. Slim and compact size**
20% smaller (width and height) than existing model* (with the condition of screw terminal socket for DIN rail)
*Compared with our HC/HJ relay.
- 2. High-capacity**
Max. switching current:
16 A (for 1 Form C type at AC load)
- 3. Slim screw terminal sockets and PC board terminal sockets are available**

TYPICAL APPLICATIONS

Control panels
Power supply units
Molding machines
Machine tools
Welding equipment
Agricultural equipment
Office equipment
Vending machines
Communications equipment
Amusement machines, etc.

NOTES

1. For cautions for use, please read “General Application Guidelines”.

2. Coil applied voltage

To ensure proper operation, the voltage applied to both terminals of the coil should be $\pm 5\%$ (at 20°C 68°F) the rated operating voltage of the coil.

Also, be aware that the pick-up and drop-out voltages will fluctuate depending on the ambient temperature and operating conditions.

3. LED indications

The light of the light emitting diode is what displays operation. If voltage remains after relay dropout, the LED might illuminate briefly.

4. Switching lifetime

The switching lifetime is defined under the standard test condition specified in the JIS C 5442(*2) standard (temperature 15 to 35°C 59 to 95°F , humidity 25 to 75% R.H.). Check this with the real device as it is affected by coil driving circuit, load type, activation frequency, activation phase, ambient conditions and other factors.

Also, be especially careful of loads such as those listed below.

1) When used for AC load-operating and the operating phase is synchronous. Rocking and fusing can easily occur due to contact shifting.

2) High-frequency load-operating
When high-frequency opening and closing of the relay is performed with a load that causes arcs at the contacts, nitrogen and oxygen in the air is fused by the arc energy and HNO_3 is formed. This can corrode metal materials.

Three countermeasures for these are listed here.

(1) Incorporate an arc-extinguishing circuit.

(2) Lower the operating frequency

(3) Lower the ambient humidity

5. Direct mount type (TM type)

If the current to the connection terminal will exceed 10 A , we recommend connecting with solder. If you are going to use a tab terminal when the current will exceed 10 A , make sure to verify the temperature rise on the receptacle side under actual conditions before using. Please be careful, because excessive stress on the TM terminal can cause fluctuations in characteristics and damage.

6. Conditions for operation, transport and storage

1) Ambient temperature, humidity, and atmospheric pressure during usage, transport, and storage of the relay:

(1) Temperature:

-40 to $+70^{\circ}\text{C}$ -40 to $+158^{\circ}\text{F}$

(2) Humidity: 5 to 85% RH

(Avoid freezing and condensation.)

The humidity range varies with the temperature. Use within the range indicated in the graph below.

Temperature and humidity range for usage, transport, and storage

(3) Atmospheric pressure: 86 to 106 kPa

2) Condensation

Condensation forms when there is a sudden change in temperature under high temperature and high humidity conditions. Condensation will cause deterioration of the relay insulation.

3) Freezing

Condensation or other moisture may freeze on the relay when the temperatures is lower than 0°C 32°F . This causes problems such as sticking of movable parts or operational time lags.

4) Low temperature, low humidity environments

The plastic becomes brittle if the relay is exposed to a low temperature, low humidity environment for long periods of time.

7. Diode characteristics

1) Reverse breakdown voltage:

Min. $1,000\text{V}$ (with diode type)

Min. 400V (with diode and LED indication type)

8. Diode type

Since the diode inside the relay coil are designed to absorb the counter emf, the element may be damaged if a large surge, etc., is applied to the diode.

If there is the possibility of a large surge voltage from the outside, please implement measures to absorb it.

9. Please connect DC coil types with LED and built-in diode correctly by verifying the coil polarity (“+” and “-”). Connecting with reverse polarity will cause the LED not to light and damage the built-in diode due to its specification.

10. Installation

If you will be installing adjacent to other relays, please keep a distance of at least 5 mm from the relay.

NOTES

About the relay-securing hook

• Screw terminal socket

1) Installation of the securing hook is easily performed by pressing upward in the direction of the arrows.

2) Removal of the securing hook is easily performed by releasing the hook and pressing down, as shown in the figure.

• Screw terminal socket (Finger protect type)

1) Install the securing hook by pressing the parts with arrows after inserting the relay.

2) Removal of the relay is easily performed by pressing the parts with arrows.

• PC board terminal socket

1) Installation of the securing hook is easily performed by pressing upward in the direction of the arrows.

2) Removal of the securing hook is easily performed by releasing the hook and pressing down, as shown in the figure.

* To prevent damage and deformity, please use the relay-securing hook at 10 N or less.
