

# LUXEON Q

Standard ceramic 3535 footprint delivering high efficacy at high-drive current

LUXEON Q delivers superior performance in a high-power LED that serves as a drop-in replacement for products that use the standard 3535 surface mount package. LUXEON Q is the first high-power LED based on the Lumileds FlipChip Technology chip-scale package (CSP) device architecture. LUXEON Q takes advantage of a fully developed ecosystem for 3535 components, including optics, to speed the time-to-market for indoor and outdoor luminaires.

## FEATURES AND BENEFITS

Industry standard 3535 package for optimization with existing designs

Lumileds FlipChip Technology for industry leading performance

High efficacy at high drive current enables high lumen and lm/\$ at high lm/W

# General Information

## Product Nomenclature

LUXEON Q emitters are specified and binned “hot” under conditions comparable to those found in “real-world” lighting products. The test conditions for LUXEON Q are 350mA DC with junction temperature at 85°C.

The part number designation is explained as follows:

L1Q0 - x x y y 0 0 0 0 0 z z z 0

Where:

- xx — designates nominal ANSI CCT (27 for 2700K, 30 for 3000K)
- yy — designates minimum CRI performance (70 for 70CRI, 80 for 80CRI)
- zzz — designates minimum flux performance at standard binning current and temperature (e.g., 090 for 90 lumens, 110 for 110 lumens, etc). 000 designates full distribution flux performance.

Therefore, 80CRI products tested and binned at 3000K with a 110lm minimum flux at binning current and temperature will have the part numbering scheme:

L1Q0-3080000001100

Therefore, 70CRI products tested and binned at 5700K with a 130lm minimum flux at binning current and temperature will have the following part numbering scheme:

L1Q0-5770000001300

## Average Lumen Maintenance Characteristics

LUXEON Q products are tested in compliance with LM-80. Please contact your local Lumileds Technical Solutions Manager for TM-21 extrapolations or other support.

## Environmental Compliance

Lumileds is committed to providing environmentally friendly products to the solid-state lighting market. LUXEON Q is compliant to the European Union directives on the restriction of hazardous substances in electronic equipment, namely the RoHS and REACH directives. Lumileds will not intentionally add the following restricted material to the LUXEON Q: lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE).

Reverse Voltage (Vr) <sup>[4][5]</sup>	LUXEON Q LEDs are not designed to be driven in reverse bias

Notes for Table 4:

1. Proper current derating must be observed to maintain junction temperature below the maximum. For additional information on thermal measurement guidelines please refer to Application Brief AB118 (not available yet).
2. Residual periodic variations due to power conversion from alternating current (AC) to direct current (DC), also called "ripple", with frequencies  $\geq 100$  Hz and amplitude  $\leq 150mA$  are acceptable, assuming the average current throughout each cycle does not exceed 1050mA.
3. Pulsed operation with a peak drive current of 1200mA is acceptable if the pulse on-time is  $\leq 5$  ms per cycle and the duty cycle is  $\leq 50\%$ .
4. Transient reverse voltages and surge currents due to electrical switching or supply interruptions are acceptable if these events do not last for more than 10ms, the amplitude of the reverse voltage does not exceed 5V and the reverse current is less than 200 $\mu A$ .
5. Max 5V reverse for up to 10s is an acceptable beginning of life, one time test condition.

# Product Binning and Labeling

## Purpose of Product Binning

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical data sheets. For this reason, Lumileds bins the LED components for luminous flux and forward voltage ( $V_f$ ). Color is offered in a single 3-step or 5-step MacAdam ellipse color space centered on the ANSI CCT color bins. For additional information please review the MacAdam ellipse technical definition section.

## Decoding Product Bin Labeling

LUXEON Q emitters are labeled using a four digit alphanumeric code (CAT code) depicting the bin values for emitters packaged on a single reel. All emitters packaged within a reel are of the same 3-variable bin combination.

Reels of LUXEON Q emitters are labeled with a four digit alphanumeric CAT code following the format below:

ABCD

A = Flux/Radiometric power bin (D, E, etc.)

B, C = Color bin (30, 3U, 3L, 5A, 5B, 5C, 5D etc.)

D =  $V_f$  bin (Q, R, S)

# Luminous Flux and Forward Voltage Bins

Table 7 lists the standard photometric luminous flux bins for LUXEON Q emitters (tested and binned at 350mA and  $T_j = 85^\circ\text{C}$ ). Although several bins are outlined, product availability in a particular bin varies by production run and by product performance. Not all bins are available in all colors.

Table 7. Flux Bins

Bin Code	Minimum Photometric Flux (Lm)	Maximum Photometric Flux (Lm)
