1. Application

This specification applies to color TFT-LCD module, LQ121S1LG42

These specification sheets are the proprietary product of SHARP CORPORATION("SHARP) and include materials protected under copyright of SHARP. Do not reproduce or cause any third party to reproduce them in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of SHARP.

The device listed in these specification sheets was designed and manufactured for use in general electronic equipment.

In case of using the device for applications such as control and safety equipment for transportation (aircraft, trains, automobiles, etc.), rescue and security equipment and various safety related equipment which require higher reliability and safety, take into consideration that appropriate measures such as fail-safe functions and redundant system design should be taken.

Do not use the device for equipment that requires an extreme level of reliability, such as aerospace applications, telecommunication equipment (trunk lines), nuclear power control equipment and medical or other equipment for life support.

SHARP assumes no responsibility for any damage resulting from the use of the device which does not comply with the instructions and the precautions specified in these specification sheets.

Confirm "12. Handling Precautions " item when you use the device.

Contact and consult with a SHARP sales representative for any questions about this device.

2. Overview

This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel, driver ICs, control circuit and power supply circuit and a backlight unit. Graphics and texts can be displayed on a 800 \times R G B \times 600 dots panel with 262,144 colors by using LVDS (Low Voltage Differential Signaling) system for interface and supplying +3.3V +5.0V DC supply voltage for TFT-LCD panel driving and supply voltage for backlight.

Backlight-driving DC/AC inverter is not built in this module.

Viewing angle is 6 o'clock direction.

3. Outline Specifications

Parameter	Specifications	Unit
Display size	31 (12.1") Diagonal	cm
Active area	246.0 (H) X 184.5 (V)	mm
Pixel format	800 (H) X 600 (V)	pixel
	(1 pixel=R+G+B dots)	
Number of colors	262, 144 colors	
(Number of gray scale level)	(64 gray scales per color)	
Pixel pitch	0.3075 (H) X 0.3075 (V)	mm
Pixel configuration	R,G,B vertical stripe	
Display mode	Normally white	
Unit outline dimensions *1	276.0(W)×209.0(H)×Max.11.0 (D) *Outline dimensions is shown in Fig.1	mm
Mass	MAX. 660	g
Surface treatment	Anti-glare and hard-coating 3H	

[Note] excluding backlight cables.

7-2. Backlight driving

The backlight system is an edge-lighting type with 2 CCFT (Cold Cathode Fluorescent Tube).

The characteristics of single tamp are snown in the following table.									
Parameter	Symbol	Min.	Тур.	Max.	Unit	Remar	k		
Lamp current range	IL	3.0	6.0	6.5	mArms	[Note1]			
Lamp power consumption	PL	-	3.5	-	W	[Note2]			
Lamp frequency	FL	40	60	80	kHz	[Note3]			
Kick-off voltage	Vs	-	-	1200	Vrms	Ta=25 °C	[Note4]		
		-	-	1400		Ta=0 °C			
		-	-	1500		Ta=-10 °C			

[Note1] Lamp current is measured with current meter for high frequency as shown below.

- [Note2] At the condition of IL=6.0mArms
 - The data don't include loss at inverter. (IL=6.0mArms)
- [Note3] Lamp frequency may produce interference with horizontal synchronous frequency, and this may cause beat on the display. Therefore lamp frequency shall be detached as much as possible from the horizontal synchronous frequency and from the harmonics of horizontal synchronous to avoid interference.
- [Note4] The voltage above this value should be applied to the lamp for more than 1 second to startup. Otherwise the lamp may not be turned on.
- [Note5] Lamp is consumables. In the following condition, the life time is 50,000 hour as the reference value and it is not guaranteed in this technical literature sheet by SHARP.

Above value is applicable when lamp is placed horizontally.

Lamp life time is defined that it applied either or under this condition (Continuous turning on at Ta=25 °C, IL=6.0mArms)

Brightness becomes 50% of the original value under standard condition.

Kick-off voltage at Ta=-10 °C exceeds maximum value,1500Vrms.

(Lamp life time may vary if lamp is in portrait position due to the change of mercury density inside the lamp.) Lamp life time shortens according to the state of mounting and use.

In case of operating under lower temp environment, the lamp exhaustion is accelerated and the brightness becomes lower. (Continuous operating under for around 1 month under lower temp condition may reduce the brightness to half of the original brightness.)

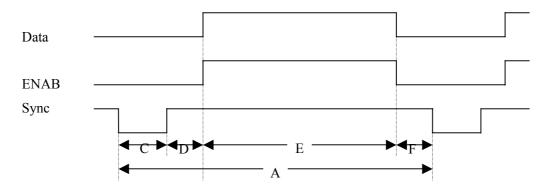

In case of such usage under lower temp environment, periodical lamp exchange is recommended. [Note6] The performance of the backlight, for example life time or brightness, is much influenced by the characteristics of the DC-AC inverter for the lamp. When you design or order the inverter, please make sure that a poor lighting caused by the mismatch of the backlight and the inverter (miss-lighting, flicker, etc.) never occur. When you confirm it, the module should be operated in the same condition as it is installed in your instrument. Be sure to use a back light power supply with the safety protection circuit such as the detection circuit for the excess voltage, excess current and or electric discharge waveform. Be sure to use the detect circuit by which one side of the CCFT lamps can be controlled independently. Otherwise, when one side of the CCFT is open, the excess current may possibly be applied to the other side of the lamp. Recommended inverter is "CXA-P1212B-WJL(TDK corporation)".

- [Note7] It is required to have the inverter designed so that to allow the impedance deviation of the two CCFT lamps and the capacity deviation of barast capacitor.
- [Note8] Under the environment of 10 lx or less, lamp may not turn on or it may take some time to turn on.

8. Timing characteristics of input signals

8-1. Timing characteristics

(These are specified at the digital inputs/outputs of LVDS transmitter/receiver.)

(Vertical timing)

Item(symbol)	Min.	Тур.	Max.	Unit	備考
Vsync cycle (T _{VA})	-	17.6	-	ms	Negative
	628	666	798	line	
Vsync pulse width (T _{VC})	2	4	6	line

Active display area (T_{VE})	600	600	600	line	
Front porch (T _{VF})	3	39	-	line	

(Horizontal timing)

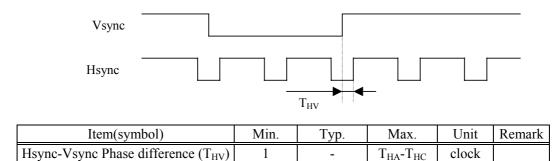

Item(symbol)	Min.	Тур.	Max.	Unit	Remark
Hsync cycle (T _{HA})	20.8	26.4	39.9	us	Negative
	832	1056	1395	clock	
Hsync pulse width (T _{HC})	2	128	200	clock	
Back porch (T _{HD})	0	-	-	clock	When ENAB
					signal is input.
	88	88	88	clock	When ENAB
					signal is fixed to
					low level.
Active display area (T _{HE})	800	800	800	clock	
Front porch (T _{HF})	0	40	-	clock	

(Clock signal)

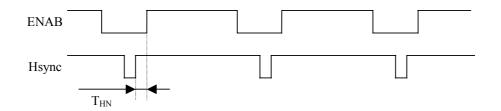

Item	Min.	Тур.	Max.	Unit	Remark
Frequency	35	40	42	MHz	[Note1]

[Note1] In case of lower frequency, the deterioration of display quality, flicker etc., may be occurred.

(Hsync-Vsync Phase difference)

(Hsync-ENAB Phase difference)

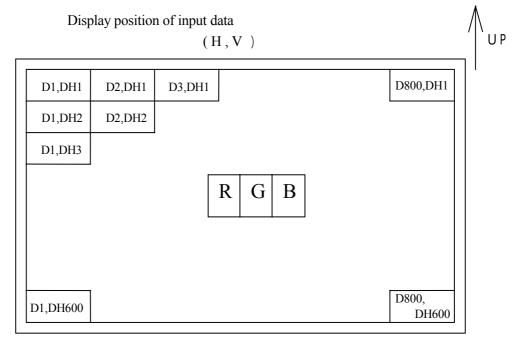

Item	Min.	Тур.	Max.	Unit	Remark
Hsync-ENAB Phase difference (T_{HN})	0	-	T _{HA} -T _{HC} -800	clock	

8-2 Display position

Item	Standards	Beginning	Ending	Unit	Remark
Horizontal	rising edge of ENAB	0	800	clock	
	rising edge of Hsync	88	888	clock	[Note1]
Vertical	rising edge of Vsync	23	623	line	

[Note1] In case that ENAB signal is fixed to low level. Do not keep ENAB signal high during operation.

8-3. Input Data Signals and Display Position on the screen

9. Input Signals, Basic Display Colors and Gray Scale of Each Color

[Note]

The measurement shall be executed 30 minutes after lighting at rating.

The optical characteristics shall be measured in a dark room or equivalent state with the method shown in Fig.3 below.

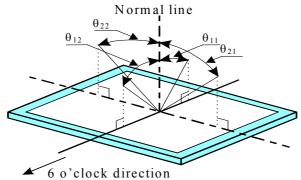

Photodetector

Center of the screen

Fig.3 Optical characteristics measurement method

[Note1]Definitions of viewing angle range:

[Note2]Definition of contrast ratio:

The contrast ratio is defined as the following.

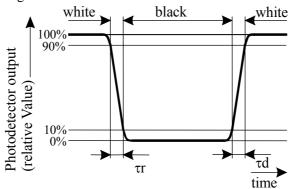

Luminance (brightness) with all pixels white

Contrast Ratio (CR) =

Luminance (brightness) with all pixels black

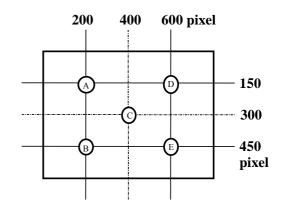

[Note3]Definition of response time:

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

[Note4]This shall be measured at center of the screen. [Note5]Definition of white uniformity:

White uniformity is defined as the following with five measurements $(A \sim E)$.

w = Minimum Luminance of five points (brightness)

11. Display Quality

The display quality of the color TFT-LCD module shall be in compliance with the Incoming Inspection Standard.

12.Handling Precautions

- a) Be sure to turn off the power supply when inserting or disconnecting the cable.
- b) Be sure to design the cabinet so that the module can be installed without any extra stress such as warp or twist.
- c) Since the front polarizer is easily damaged, pay attention not to scratch it. Blow away dust on the polarizer with antistatic N₂ blow. It is undesirable to wipe off because a polarizer is sensitive. It is recommended to peel off softly using the adhesive tape when soil or finger oil is stuck to the polarizer. When unavoidable, wipe off carefully with a cloth for wiping lenses.
- d) Wipe off water drop immediately. Long contact with water may cause discoloration or spots.
- e) When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
- f) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface. Handle with care.
- g) Since CMOS LSI is used in this module, take care of static electricity and injure the human earth when handling.Observe all other precautionary requirements in handling components.
- h) Since there is a circuit board in the module back, stress is not added at the time of a design assembly. Please make it like. If stress is added, there is a possibility that circuit parts may be damaged.
- i) Protection film is attached to the module surface to prevent it from being scratched . Peel the film off slowly, just before the use, with strict attention to electrostatic charges. Blow off 'dust' on the polarizer by using an ionized nitrogen.
- j) The polarizer surface on the panel is treated with Anti-Glare for low reflection. In case of attaching protective board over the LCD, be careful about the optical interface fringe etc. which degrades display quality.
- k) Do not expose the LCD panel to direct sunlight. Lightproof shade etc. should be attached when LCD panel is used under such environment.
- 1) Connect GND to 4 place of mounting holes to stabilize against EMI and external noise.
- m) There are high voltage portions on the backlight and very dangerous. Careless touch may lead to electrical shock. When exchange lamps or service, turn off the power without fail.
- n) When handling LCD modules and assembling them into cabinets, please avoid that long-term storage in the environment of oxidization or deoxidization gas and the use of such materials as reagent, solvent, adhesive, resin, etc. which generate these gasses, may cause corrosion and discoloration of the LCD modules.
- o) Cold cathode fluorescent lamp in LCD panel contains a small amount of mercury, please follow local ordinances or regulations for disposal.
- p) Be careful of a back light lead not to pull by force at the time of the wiring to an inverter, or line processing.
- q) When install LCD modules in the cabinet, please tighten with "torque= 0.294 ± 0.02 N• m(3.0 ± 0.2 kgf• cm)". Be sure to confirm it in the same condition as it is installed in your instrument.
- r) Liquid crystal contained in the panel may leak if the LCD is broken. Rinse it as soon as possible if itgets inside your eye or mouth by mistake.
- s) Notice : Never dismantle the module , because it will cause failure. Please don't remove the fixed tape, insulateing tape etc that was pasted on the original module. (except for protection film of the panel and the crepe tape(yellow tape) of fixing lamp cable temporarily.)
- t) Be careful when using it for long time with fixed pattern display as it may cause afterimage. (Please use a screen saver etc., in order to avoid an afterimage.)
- u) Adjusting volume have been set optimally before shipment, so do not change any adjusted value. If adjusted value is changed, the specification may not be satisfied.
- v) If a minute particle enters in the module and adheres to an optical material, it may cause display non-uniformity issue, etc. Therefore, fine-pitch filters have to be installed to cooling and inhalation hole if you intend to install a fan.
- w) The lamp used for this product is very sensitive to the temperature.

Luminance decreases rapidly when it is used for a long time or repeatedly under the environment of the low temperature or the module is being cooled. Please avoid the continuous or repeating use of it under such an environment. It may decrease up to 50% of the initial luminance in about one month under the low temperature environment. Please consult our company when it is used under the environment like the above mentioned.

13. Packing form

Product country	JAPAN	CHINA
Piling number of cartons	М	AX. 5
Package quantity in one carton	1	0pcs
Carton size	395(W)×275	(H)×350(D) mm
Total mass of one carton filled with full modules	8	000g
Packing form is shown	I	Fig.2

14.Reliability test items

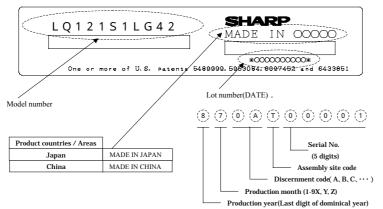

No.	Test item	Conditions	Remark
1	High temperature storage test	Ta=70 240h	
2	Low temperature storage test	Ta= -30 240h	
3	High temperature	Ta=40 ; 95%RH 240h	
	& high humidity operation test	(No condensation)	
4	High temperature operation test	Ta=65 240h	
5	Low temperature operation test	Ta = -10 240h	
6	Vibration test	Frequency: 10 ~ 57Hz/Vibration width (one side):0.076mm	
	(non- operating)	: 57 ~ 500Hz/Gravity:9.8m/s ²	
		Sweep time : 11 minutes	
		Test period : 3 hours	
		(1 hour for each direction of X,Y,Z)	
7	Shock test	Max. gravity : 490m/s ²	
	(non- operating)	Pulse width : 11ms, half sine wave	
		Direction : $\pm X, \pm Y, \pm Z$ once for each direction.	
8	ESD test	Contact discharge (150pF 330)	
		non-operating = ± 10 kV, operating = ± 8 kV	
		Atmospheric discharge (150pF 330)	
		non-operating = ± 20 kV, operating = ± 15 kV	
9	EMI	Measurement in 10m site	VCCI
		Display position on the screen = "H" (full-screen),	(Class B)
		GND to 4 place = un-connect, Vcc / Vsignal = typ.	
	[Damilt Freelessting Criteria]		

[Result Evaluation Criteria]

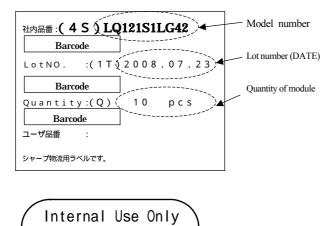

Under the display quality test conditions with normal operation state, these shall be no change which may affect practical display function. (normal operation state : Temperature: $15 \sim 35$, Humidity: $45 \sim 75\%$, Atmospheric pressure: $86 \sim 106$ kpa)

15.Others

1) Lot number Label:

15-2 Packing box Label:

R.C. (RoHS Compliance) means these parts have corresponded with the RoHS directive.

15-3 If any problem occurs in relation to the description of this specification, it shall be resolved through discussion with spirit of cooperation.

16. Storage conditions

<Environmental condition range of storage temperature and humidity>

Temperature 0 to 40 degrees Celsius

R.C.

Relative humidity 95% and below

[Note] Please refer below as a mean value of the environmental conditions.

Summer timetemperature20 to 35 degrees Celsiushumidity85% and belowWinter timetemperature5 to 15 degrees Celsiushumidity85% and below

Please maintain within 240 hours of accumulated length of storage time, with conditions of 40 degrees Celsius and room humidity of 95%.

Direct sun light

Please keep the product in a dark room or cover the product to protect from direct sun light.

Atmospheric condition

Please refrain from keeping the product with possible corrosive gas or volatile flux.

Prevention of dew

- * Please store the product carton either on a wooden pallet or a stand / rack to prevent dew.
 - Do not place directly on the floor. In addition, to obtain moderate ventilation in between the pallet's

top and bottom surfaces, pile the cartons up in a single direction and in order.

- * Please place the product cartons away from the storage wall.
- * Please maintain the storage area with an appropriate ventilation. It is recommendable to furnish the storage area with equipments such as ventilation systems.
- * Please maintain the ambient temperature within the range of natural environmental fluctuation. Storage period
 - Within above mentioned conditions, maximum storage period should be one year.
