DESCRIPTION

The SM5600 Series of OEM pressure sensors are laser trimmed for enhanced performance, temperature-compensated, low-pressure sensors in dual in-line packages for printed circuit board mounting. These sensors offer improved performance, as well as the option for constant voltage excitation. With the ability to detect pressure ranges as low as 0.15 PSI, the SM5652 is ideal for applications requiring extreme sensitivity from respiration to air filter obstructions.

The SM5600 Series pressure sensors are constructed by attaching a highly stable piezoresistive pressure sensor chip to a ceramic substrate. Thick film resistors on the ceramic are laser trimmed during manufacturing to provide zero offset calibration, temperature compensation for zero offset, and temperature compensation for sensitivity.

Various pressure port configurations are available for flexibility in matching this product to specific applications.
