Sealed and Unsealed Push-Pull Connectors

**SOURIAU**  
Connection Technology

# JBX Series Push-Pull Connectors

## Introduction

This catalog introduces the push-pull connector ranges for industrial applications. These products are particularly suitable for high reliability and high quality applications where a simple yet fast method to connect/disconnect is required. Also suitable for high endurance and ease of operation in very limited spaces. The aesthetics of the product allows for perfect integration on front panel equipments.

# Where and Why push-pull ?

- Extremely fast and easy to use
- A thousand matings / unmatings
- Enhanced appearance to add value to equipment
- Space saving

**Medical**

## Push-pull locking system

The locking of the plug into the receptacle is achieved by a simple axial push on the outer shell.

Connection cannot be broken by pulling the cable or any other parts of the plug than the outer shell.

To unmate the plug from the receptacle, just pull axially the outer shell.

# JBX Series Push-Pull Connectors

## Major features & benefits

### Key features

- Mechanically keyed : ensures correct polarisation and alignment.
- Contact layouts from 2 to 30 contacts.
- Wire gauges range from 30 AWG to 12 AWG.
- High contact density in a small space.
- Contact termination in either crimp, solder, PCB or right angle PCB contacts.

### User advantages

#### Blister packaging

#### 6-collet cluster

Allows a wide range of cable diameter applications for a single connector.

#### Removable contacts

Available crimp versions allow easier wiring and maintenance

### Part number system

Basic series	JBX	FD	1	G	05	M	C	S	D	S	M	R
Shell type-Receptacle	ER-EA-SR-PC-ED-EP-EZ-SA											
Shell type - Plug	FD-FC-FF-FM-FN											
Shell size	00 - 0 - 1 - 2 - 3											
Keying	G - J - A - B											
Contact layout	02 ----- 30											
Contact type	M : pin    F : socket											
Contact termination	C: crimp; S: solder; P*: straight PCB tails ; Q*: Right Angle PCB tails											
Surface plating	S: Outer shell brass alloy chrome over nickel plating N: Outer shell in brass alloy with black plating (consult SOURIAU USA)											
Obligatory Suffix	D: For all part numbers											
Contact Size	S: All contact diameters except .05 mm    P: 0.5 mm contact dimensions only											
Cable Backnut Option	M: Connector with backnut for protective boot - Protective boot to order separately page 13											
Key Identifier	R: Red dot on shell for ED, ER, EZ, PC, SR, FC, FD, FF, FM & FN only											

\* For receptacle with female contact only

## Keying

### Keying angles

JBX Series are mechanically keyed to ensure correct alignment of the inserts before the contacts mate.

«G» : normal inserts ; 0° keying angle, plugs with pin contacts, receptacles with socket contacts

Solder Max. AWG	30
Crimp wire Max. AWG	
Max current rating	2
Test voltage (Vrms)	1000
Working Voltage (Vdc/Vrms)	500/350

### Voltage Test Procedure

The **testing voltage** corresponds to the maximum voltage the connector is able to withstand in normal climatic conditions. The value is about 75% of the electrical breakdown voltage. The testing voltage level can be reached several times in connectors life, but never applied for a continuous duration.

The **working voltage** corresponds to the maximum voltage the connector is able to withstand continuously during its life time, in real environmental conditions, even with high temperature. The value is around 1/3 of the testing voltage.

### Maximum current rating

This **indicated maximum current rating** corresponds to the maximum current that can be applied **simultaneously on each line of the connector mated pair**, continuously during its life time, in normal climatic conditions.

Remark : If the current is applied on only one contact of the layout, then an increased current value can be achieved over a long duration.

## Options

### Protective boot

With each JBX connector, one protective boot can accept diverse cable diameters thus the end-user can manage various cable diameters with one SOURIAU part number.

Part number	Shell size	Dimensions			
		Ø A	L	Ø Cable	
				Min	Max
JBX 00 MPN	00	1.5	15	1	3.5
JBX 0 MP*	0	2.2	20	1.5	5.5
JBX 1 MP *	1	2.6	25	2	7.5
JBX 2 MP *	2	4	30	3.5	9.7
JBX 3 MP*	3	5	35	4.9	12

\*Color code - see chart below / in size 00 available only in black

Color Code	Colors
A	blue
B	white
G	grey
J	yellow
M	brown
N	black
R	red
V	green
O	orange

**Material :**  
ELASTOLLAN (PUR)

**Working temperature :**  
- 40°C ; + 80°C  
- 40°F ; + 176°F

Parts that require a protective boot need to be ordered with an M suffix. **Protective boots are ordered separately.**

**Caps :** an efficient protection against dust

## Wiring & assembly instructions

### Panel cutout

Size	00	0	1	2	3
$\varnothing A$	7.1	9.1	12.1	15.1	18.1
B	6.4	8.3	10.6	13.6	16.6

### Removable contacts

#### Reliable design

- Conical entry with chamfered edge on the socket contact and smooth slope on the pin contact ensure perfect concentric mating even when handled carelessly.
- The pressure spring of the socket contact maintains a constant force on the pin contact when mated.

### Crimp contacts

Contact		Usable cables			Max. current rating (A)	Contact resistance (m $\Omega$ )	Endurance (number of cycles)
$\varnothing C$	$\varnothing F$	Core section (mm $^2$ )		AWG			
		Min	Max.				
0.7	0.85	0.129	0.326	22-24-26	7	5	500 Max.
0.9	1.1	0.205	0.518	20-22-24	10	3.5	> 1000
1.3	1.4	0.326	0.823	18-20-22	15	3	> 1000
1.6	1.9	0.823	2.081	14-16-18	17	2.5	> 1000
2.0	2.4	1.309	3.309	12-14-16	30	2.5	> 1000

### Solder contacts

Contact		Usable cables			Max. current rating (A)	Contact resistance (m $\Omega$ )	Endurance (number of cycles)
$\varnothing C$	$\varnothing F$	Core section (mm $^2$ )		AWG			
		Min	Max.				
0.7	0.7	-	0.30	26	7	5	500 Max.
0.9	0.8	-	0.21	24	10	3.5	> 1000
1.3	1.1	-	0.60	20	15	3	> 1000

## Wiring & assembly instructions

### Straight plug

**Cable stripping** : see page 17

### Connector preparation

- 1 - Select the proper collet ①. (see page 20)
- 2 - Slide the protective boot ③ the backnut ② and the collet ① onto the cable.
- 3 - In case of a screened cable, combs out the screen and fold back over the collet ①.

### Contact wiring : crimp contacts

- 1 - Select the proper crimping tool (see page 29) and locator according to the connectors involved.
- 2 - Adjust the tool selector for the corresponding conductor AWG.
- 3 - Crimp the contacts ④ and then engage them into the insert cavities ⑤ till clip tightening.

### Contact wiring : solder contacts

Fixed solder contacts 0.5 mm and 0.7 mm	Removable solder contacts from 0.9 mm to 2 mm
1 - Terminate the bucket contacts using solder method	1 - Solder the conductors to the contact buckets then engage them into the insert cavities ⑤ till clip holding

### Connector assembly

- 1 - Position 2 half bushes ⑥ on the insert ⑤ making sure that the insert key appears through window of one bush.
- 2 - Position the collet and the half bushes while maintaining the screen. Bushing keys are seated in the collet keying slots.
- 3 - Position all the sub-assembly in the connector housing ⑦ making sure to keep sub-assembly aligned.
- 4 - Install the backnut ② and screw it. Use the two wrenches well positionned on the flats A and B. Place a wrench to grip flats B, use the other wrench to tighten the backnut at the flats A. Contact factory for proper torque values.
- 5 - Install the protective boot ③ if exists.

# JBX Series Push-Pull Connectors

## 90° Elbow plug

**Cable stripping** : see page 17

### Connector preparation

- 1 - Select the proper collet ② (see page 20).
- 2 - Slide the protective boot, ④ the backnut ③, the collet ② and the elbow outlet ① onto the cable.
- 3 - In case of a screened cable, comb out the screen and fold back over the collet ②.
- 4 - Position in the elbow outlet making sure the anti-rotating keys are well aligned.
- 5 - Tighten the backnut ③ till bottomed.
- 6 - Install the protective boot ④ if exists.

### Contact wiring : crimp contacts

- 1 - Select the proper crimping tool (see page 29) and position according to connectors involved.
- 2 - Adjust the tool selector for the corresponding conductor AWG.
- 3 - Crimp the contacts ⑥ then engage them into the insert cavities ⑤ till clip tightening.

### Contact wiring : solder contacts

Fixed solder contacts 0.5 mm and 0.7 mm	Removable solder contacts from 0.9 mm to 2 mm
1 - Terminate the bucket contacts using solder method	1 - Solder the conductors to the contact buckets then engage them into the insert cavities ⑤ till clip holding

### Connector assembly

- 1 - Position the ring ⑦ on the insert ⑤ then engage all in the spacer ⑧
- 2 - Position all the sub-assembly in the connector housing ⑨ with milled flats A of the elbow outlet facing to the rear of the plug housing.
- 3 - Tighten the screw ⑩ Contact factory for proper torque values.

# JBX Series Push-Pull Connectors

## Wiring & assembly instructions

### Collets selection according to cable diameters

4 or 6 collets per shell size allow a wide range of cable diameters for a single connector ; outer cable diameters are for reference only, since values will change with specific manufacturers cable properties.

Collet number	Cable diameter				
	Shell size 00	Shell size 0	Shell size 1	Shell size 2	Shell size 3
1	1.1 - 1.9	1.5 - 2.5	2.0 - 2.5	3.5 - 4.7	4.9 - 6
2	2 - 28.8	2.6 - 3.5	2.6 - 3.5	4.8 - 5.7	6.1 - 7.2
3	2.9 - 3.5	3.6 - 4.5	3.6 - 4.5	5.8 - 6.7	7.3 - 8.4
4	-	4.6 - 5.5	4.6 - 5.5	6.8 - 7.7	8.5 - 9.6
5	-	-	5.6 - 6.6	7.8 - 7.7	9.7 - 10.8
6	-	-	6.7 - 7.5	8.8 - 9.7	10.9 - 12.0

### Metal collets

Optional discrete cable diameter metal collets are available. Part numbers can be configured by replacing the obligatory "D" character with maximum cable diameter from the chart below:

Shell size	Cable diameter
0	19, 25, 35, 45, 55, 57
1	25, 35, 45, 55, 66, 75, 77
2	47, 57, 67, 77, 87, 97
3	60, 72, 84, 96, 108, 120

Metal collet available for all sizes

Discreet application based on cable diameter

# JBX Series Push-Pull Connectors

## Coupling torques

Tools (jaw dimensions)	7 x 0.5	9 x 0.6	12 x 1	15 x 1	18 x 1	Advised torques* in Nm
Size	00	0	1	2	3	
	7	11	14	17	21	Please call Souriau Technical Support for additional information at 717-718-2662 technicalsupport@souriau.com
	6	8	10	13	15	
	6	9	11	14	16	
	-	10	12	15	17	
	-	10	13	17	20	
	-	9	13	15	-	

Torque values are the maximum allowable for each connector size.  
 Torque values will vary due to the type and size of the cable used.  
 \*Apply thread lock to back nut prior to assembly.  
**Note :** All the tooling numbers refer to the drawings pages 8 and 9.

## Shielding

Shell size	Electrical continuity (mΩ)
00	4.5
0	4
1	3
2	2.5
3	2.5

# JBX Series Push-Pull Connectors

## Plug assembly instructions

1. Determine what size cable you will be using. Then select the proper collet number for that cable.

## Collets selection according to cable diameters

3 or 5 collets per shell size allow a wide range of cable diameters for a single connector. Cable out diameters are for information only, since values will change with each cable construction.

Collet Number	Cable diameter			
	Shell size 1	Size O option G	Shell size 1	Size option G
1	1.5 - 2.5	-	2 - 2.5	-
2	2.6 - 3.5	-	2.6 - 3.5	-
3	3.6 - 4.5	-	3.6 - 4.5	6.1 - 6.7
4	-	4.6 - 5.5	4.6 - 5.5	6.8 - 7.7
5	-	5.6 - 6	5.6 - 6	7.8 - 8

Collet number 4 in shell size 0 and collet number 6 in shell size 1 are not used

2. Strip the cable and each wire to the required strip length.

	2.0	22	4	10	30	4	10

- When assembling a plug with a protective boot (#3), prep the cable by taking the protective boot and sliding it with the small inside diameter first onto the cable. Then slide the end of the back nut (#2) that has the smaller diameter onto the cable. Next, take the collet (#1) and slide the end with the gripping teeth first onto the cable until the opposite end of the collet is flush with the cut end of the jacket. If the cable has shielding, fold back the braid so that it is covering the outside diameter of the collet. Do not place braid into any area of the alignment slots. Then insure that the braid does not interfere with the alignment slots of the collet.

- Attach removable contacts to wires:

- If using crimped contacts, crimp the contacts onto the ends of the exposed wires using the proper crimping tool set on the correct AWG wire. (see FIGURE 4.A). After the contact has been crimped to the wire, check each contact to insure that the contact is securely crimped to the wire.

b. If using soldered contacts, prep each wire with flux and then tin dip each exposed wire end. Next pre-load a piece of heat shrink 1.6 onto the wire (Individual heat shrink tubes are optional). Solder each wire to the solder cup end of the contact. To avoid shorts, make sure that no solder comes in contact with any other contact or wire on the connector.

# JBX Series Push-Pull Connectors

After the contact has been soldered to the wire, check each contact to insure that the contact is securely soldered to the wire. Slide the pre-loaded heat shrink over the solder joint and shrink into place. Do not over-heat the solder joint area as it can cause the solder to re-flow or it could burn the wire insulation.

5. If inserting removable contacts:

- a. Starting with the interface end of the contact, carefully insert each contact into the backside of the insulator that has the position loading path indicator (worm) on it. Start with the end of the position loading path indicator (worm) that has the half circle on it (Position #1). Then follow the position loading path indicator (worm) around the insulator. You will go counter clockwise if using a male contact and clockwise if using a female contact (see diagram below for the position loading path indicator (worm) layout). If the connector has center contacts, it is sometimes easier to start at the end of the position loading path indicator (worm) (last position) and work backwards. This is up to the assembler and the process they are using to insert the contacts. Make sure not to bend the contact when inserting it into the insulator. It is extremely important that the contact is completely seated in to the insulator. For the connector to function properly, the contact should click/snap into place when seated. To confirm the seating of the contact, check each contact for proper seating.

6. Removal of contacts:

- a. Using the proper extraction tool insert the tool over the front of the contact and push contact out. Failure to use the proper extraction tool can result in damage to the contact.

## TOOLINGS – JBX – JKX

### Manual Extraction Tools

Contacts automatically extracted without pulling on the cable.

The extraction tool is the same for both male and female contacts.

Shell size	Ø Contacts	SOURIAU part number	ASTRO part number
0	0.7	JBX OUIT DC07	ATJP 2045
	0.9	JBX OUIT DC09	ATJP 2057
1	0.7	JBX OUIT DC07	ATJP 2045

2	0.7	JBX OUIT DC07	ATJP 2045
	0.9	JBX OUIT DC09	ATJP 2057
	1.3	JBX OUIT DC13	ATJP 2077
	1.6	JBX OUIT DC16	ATJP 2095
	2.0	JBX OUIT DC20	ATJP 2115
3	0.7	JBX OUIT DC07	ATJP 2045
	0.9	JBX OUIT DC09	ATJP 2057
	1.3	JBX OUIT DC13	ATJP 2077
	1.6	JBX OUIT DC16	ATJP 2095
	2.0	JBX OUIT DC20	ATJP 2115

7. Take the keyed half bushing (#6) and place it over the insulator so that the window is lined up with the key on the insulator and the key on the half bushing is pointing to the back of the insulator (position loading path indicator (worm end)). Then take the half bushing without the window (#6) and place on the opposite side of the insulator so that both half bushings are aligned with each other.

# JBX Series Push-Pull Connectors

## Plug assembly instructions

8. Take the collet that is pre-loaded on the cable and align the slots in the collet with the keys on the end of the half bushings (you may need to move the braid away from the slots and spin the collet slightly). Once they are aligned, compress the assembly so that it is in line and there are no gaps between the collet & the half bushings. The braid should still be in place once the assembly is inserted.
9. Take a connector housing (#7) and slide it over the insulator so that the red dot on the connector housing lines up with the key on the half bushing with window. Push the whole assembly into the connector housing until it bottoms out. Insure that the keys are seated properly by turning the collet that is already aligned with the half bushings. If the collet does not turn, then the keys are correctly aligned. If the collet does turn, then you must withdraw the assembly & realign the keys.

10. Once the assembly is installed into the connector housing and is aligned properly, apply thread lock to thread area. Then slide the back nut up until you can manually start the back nut threads onto the threaded end of the connector housing. Tighten the back nut up as far as you can by hand, then take the appropriate wrenches and place the wrenches onto the flats located on the connector housing. Do not over torque back nut as it can cause connector failure.
11. If the connector requires a protective boot, slide the boot over the lip on the back nut.
12. Potting of backend of plug with clipped contacts:  
Clipped contacts are designed to float in the connector so that they self align when mated. It is sometimes necessary to pot the back end of the connector so that the contacts are sealed off from the environment. When this application is needed, it's recommended that the assembler engage a mating connector/alignment tool to the assembly being potted. Once the mating connector/alignment tool is engaged, it must be left engaged until the potting compound has hardened. This will insure that the true position requirements are met. If the application is for low volume, a mating connector can be used. If the application is for high volume, it is recommended that an alignment tool be purchased from the supplier..

## Trouble shooting

Problem:	Cause:	Correction:
Contact will not seat in connector, contact backing out.	Wrong wire or insulation size, wrong strip length, poor crimping, broken clips, damaged insulator, removed contact without proper removal tool, bad crimp.	Use correct wire, adjust strip length, strip and recrimp with the new contact, replace insulator using wrong crimp tool, replace contact
Bent solder contact	Bent in handling, bent in soldering operation, connector assembled incorrectly. Pins and insulator were inserted into electrical test while unprotected by shell	Replace insert with contacts
Connector will not release from mating part or operate correctly	Not using flats on latching sleeve and back nut to torque connector, improper assembly of the connector, over mold material inside connector	Release back-nut and re-torque, disassemble and reassemble, replace connector
Over tightened the back nut	Connector will not release from mating part or operate correctly, damage connector	Loosen back nut and retighten
Collet will not grip cable	Loose cable in connector	Check correct collet size is being used
Connector will not assemble	Incorrect alignment of key in connector, half bushings, connector housing, insulator, collet, braid in key slots in collet	Disassemble connector and reassemble connector-aligning keys, relocate braid in collet
Contact stubbing after mating	Bent contact and damaged contact, connector assembled incorrectly	Re-align contact, replace insert with contacts.
Electrical failure	Improper crimping, wrong wire strip length, wire loading incorrect location, poor solder joint	Remove contact with correct removal tool, reinstall new contact, and verify strip length

# JBX Series Push-Pull Connectors

## Receptacle assembly instructions

1. Select the proper JBX receptacle and contact size for the specific cable application by using the contact layout chart as depicted in the Push Pull catalog.
2. Strip the cable/wire to the required strip length.

	1.6	22	4	10	30	4	10

3. Depending on application and shell type, the nut and washer may be removed before attaching the wires to the contacts.
4. Attach crimped contacts to wires:
  - a. If using crimped contacts, crimp the contacts onto the ends of the exposed wires using the proper crimping tool and locator set on the correct AWG wire size (see FIGURE 4.A). After the contact has been crimped to the wire, check each contact to insure that the contact is securely crimped.

b. If using clipped solder contacts, prep each wire with flux and then tin dip each exposed wire end. Next pre-load a piece of heat shrink onto the wire (Individual heat shrink tubes are optional). Solder each wire to the solder cup end of the contact. To avoid shorts, make sure that no solder comes in contact with any other contact or wire on the connector. After the contact has been soldered to the wire, check each contact to insure that the contact is securely soldered to the wire. Slide the pre-loaded heat shrink over the solder joint and shrink into place. Do not over-heat the solder joint area as it can cause the solder to re-flow or it could burn the wire insulation.

### 5. If inserting terminated contacts:

a. Starting with the interface end of the contact, insert each contact into the backside of the insulator that has the position loading path indicator (worm) on it. Start with the end of the position loading path indicator (worm) that has the half circle on it (Position #1). Then follow the position loading path indicator (worm) around the insulator. You will go counter clockwise if using a male contact and clockwise if using a female contact (see diagram below for the position loading path indicator (worm) layout). If the connector has center contacts, it is some times easier to start at the end of the position loading path indicator (worm) (last position) and work backwards. This is up to the assembler and the process used to insert the contacts. Make sure not to bend the contact when inserting it into the insulator. It is extremely important that the contact is seated in the insulator for the connector to function properly. The contact should click/snap into place when seated. Check each contact for proper seating.

### 6. Removal of contacts:

Using the proper extraction tool (See FIGURE 6.A), insert the tool over the front of the contact and push contact out. Failure to use the proper extraction tool can result in damage to the contact.

# JBX Series Push-Pull Connectors

## Receptacle assembly instructions

### Manual extraction tool

The extraction tool is the same for both male and female contacts.

#### 7. Potting of backend of receptacle with clipped contacts

Clipped contacts are designed to float in the connector so that they self align when mated. It is sometimes necessary to pot the backend of the connector so that the contacts are sealed off from the environment. When this application is needed, it is recommended that the assembler engage a mating connector/alignment tool to the assembly being potted. Once the mating connector/alignment tool is engaged, it must be left engaged until the potting compound has hardened. This will insure that the true position requirements are met. If the application is low volume, a mating connector can be used. If the application is for high volume, it is recommended that an alignment tool be purchased from the supplier.

### Trouble shooting

Problem:	Cause:	Correction:
Contact will not seat in connector, contact backing out.	Wrong wire or insulation size, wrong strip length, poor crimping, broken clips, damaged insulator, removed contact without proper removal tool, bad crimp.	Use correct wire, adjust strip length, strip and recrimp with new contact, replace insulator, using correct crimp tool, replace contact.
Bent solder contact.	Bent in handling, bent in soldering operation, connector assembled incorrectly.	Re-align contact, replace insert with contacts.
Contact stubbing after mating.	Bent contact and damaged contact, connector assembled incorrectly.	Re-align contact, replace insert with contacts. If using clipped contacts and receptacle is potted, a mating connector must be applied to the connector that is being potted. This insures that contacts will be properly aligned.
Electrical failure	Improper crimping, wrong wire strip length, wire loading incorrect location, poor solder joint.	Remove contact with correct removal tool, reinstall new contact, and verify strength.

# JBX Sealed Series Push-Pull Connectors

## Major features & benefits

### Key features

- Sealed IP 67 (mated connectors) (FE, EC, SE & PE)
- Watertight receptacles IP68 (HC, HG, HH & HM)
- Mechanically keyed : ensure correct polarisation and alignment.
- Contact arrangements : from 2 to 19 contacts.
- Wire gauge range from 26 AWG to 12 AWG.
- High contact density in a small space.
- Contact termination in either crimp, solder or PCB contacts.

### User advantages

**Wet environment**  
Splash proof IP 67

**6-collet cluster**  
Allows a wide range of cable diameter applications for a single connector.

**Removable contacts**  
Crimp versions allow easier wiring and maintenance.

### Part number system

Basic series	JBX	FD	2	G	05	M	C	S	D	S	M	R

## Technical characteristics

The technical characteristics are the same as for the standard JBX series except the following ones:

### Material specifications

Component	Material	Color	Working temperatures	
Seals	Nitril & Silicon rubber	O'ring = black Plug seal = black	-40° C; +250° C	- 58° F; + 482 ° F
Protective boot	Elastolan (UPR)	Black	-40° C; +80° C	- 40° F; + 176 ° F

### Mechanical and environmental control specifications

Characteristics	Values	
Protection Index	IP 67 (splashproof - 1/2 hour under 1 m of water)	
Operating temperatures	-40° C; +80° C	- 40° F; + 176 ° F

### Options

**Receptacle Cap:** maintain IP67 rating  
**Size 2 Part-number =** JBX BR2022

## Wiring and assembly instructions

### Panel cutout

The panel cutout is the same as for the JBX size 2 shells except for the HC type for which it corresponds to the JBX size 3 shells.

**Range of cable diameter:** from 6 to 9 mm

### Operation to add during the plug assembly:

Deposit of watertight thread glue between the backnut ② on the drawing p19) and the connection shell ① on the drawing p19).

Advised glue = Loctite 542.

## Toolings JBX

### Manual extraction tool

#### Contacts automatically extracted

The extraction tool is similar for both male and female contacts.

Shell Size	Contacts	SOURIAU part number	ASTRO part number
0	0.7	JBX OUT DC 07	ATJP 2045
	0.9	JBX OUT DC 09	ATJP 2057
1	0.7	JBX OUT DC 07	ATJP 2045
	0.9	JBX OUT DC 09	ATJP 2057
	1.3	JBX OUT DC 13	ATJP 2077
2	0.7	JBX OUT DC 07	ATJP 2045
	0.9	JBX OUT DC 09	ATJP 2057
	1.3	JBX OUT DC 13	ATJP 2077
	1.6	JBX OUT DC 16	ATJP 2095
	2.0	JBX OUT DC 20	ATJP 2115
3	0.7	JBX OUT DC 07	ATJP 2045
	0.9	JBX OUT DC 09	ATJP 2057
	1.3	JBX OUT DC 13	ATJP 2077
	1.6	JBX OUT DC 16	ATJP 2095
	2.0	JBX OUT DC 20	ATJP 2115

The contact is automatically extracted without the need of pulling onto the cable.
