TE Connectivity introduces the all new NEVALO SSL System Configuration Product Selection Guide

TE NEVALO SSL System simplifies the design process for light fixture/luminaire manufacturers.

It is an integrated approach for developing solid-state lighting systems. The NEVALO system is a plug-and-play solution including all the components required to convert from incandescent or fluorescent lighting to solid-state (SSL) lighting design.

Using TE NEVALO methodology, this guide helps in selecting the optimum components that meet design objectives -- while avoiding the extensive engineering and qualification involved to embrace new SSL technology.

Building your NEVALO SSL System

There are two parts to the NEVALO SSL System -- the products and the tools. The products will provide flexibility of choice for your applications. The tools will allow you to rapidly verify your system performance.

The configuration guide allows you to quickly and easily select all the components required to build your system.

Get started by selecting an LED Light Module, by Lumen output, Color Temperature and Beam Angle.

The complete NEVALO SSL System : Our NEVALO SSL System modules are designed as building blocks

System budget : The SSL system budget simplifies fixture design and decreases opportunities for errors.

Color coding confirms that the right subassemblies have been chosen. As you build your system, you simply check that the color codes match and that the total LLM budget is within the specific driver's range.

Budget Calculation Example

B Driver Budget Range	(33-55)
C LLM #1	22
D LLM #2	33
TOTAL =	55
The total must be equal to or fall between the Driver Budget Range. System is good	

Thermal monitor : An evaluation tool is provided to confirm the thermal performance of every LLM in your fixture design. The evaluation tool includes PC software plus a thermal test board matching the production version of the LLM.
