

## Introducing Cold Applied Splices

## KEY FEATURES

One-step termination and environmental protection

No heating required for installation — safe for use on fueled aircraft

Reliable in a wide variety of environmental conditions

Achieve environmental performance while maintaining:

- Small profile
- Electrical performance

Easy installation and application flexibility

Prevents water ingress under permanent pressure/weight

## DESCRIPTION

The cold applied splice product line is designed as a single component in-line splice to provide high environmental protection to seal the termination from moisture and provide electrical isolation. If moisture is present, it can lead to insulation failure and breakdown of the electrical connection.

In this product, sealing is achieved by replacing traditional methods, such as grommets, greases and tapes with a novel Tyco Electronics gel technology. The electrical isolation is provided by a polymer outer layer.

## APPLICATIONS

Ideal for aerospace and defense application where performance and reliability is essential

Designed to provide an immersion resistant in-line splice on 1:1 wires

- Wide range from 26 AWG to 12 AWG
- Nickel-plated, silver-plated, and tin-plated conductors
- Insulation rated for at least 135° C

Protects and seals on all conventional MIL spec and commercial wire insulation systems

## STANDARDS & SPECS

Meets or exceeds the following:

- SAE-AMS-DTL-23053/8 (Insulation sleeve)
- SAE-AS81824/12

Under qualification for SAE AS81824 and AS81824/12
